May 25, 2021

ts have long suspected that quantum mechanics allows two observers to experience
t, conflicting realities. A few years ago, they performed the first experiment that
t.

a quick recap. Alright?

works.

consciousness.

sciousness we travel from one frozen reality to another one. Over and over. These frozen
are known as world-lines.

ur perception of this movement.

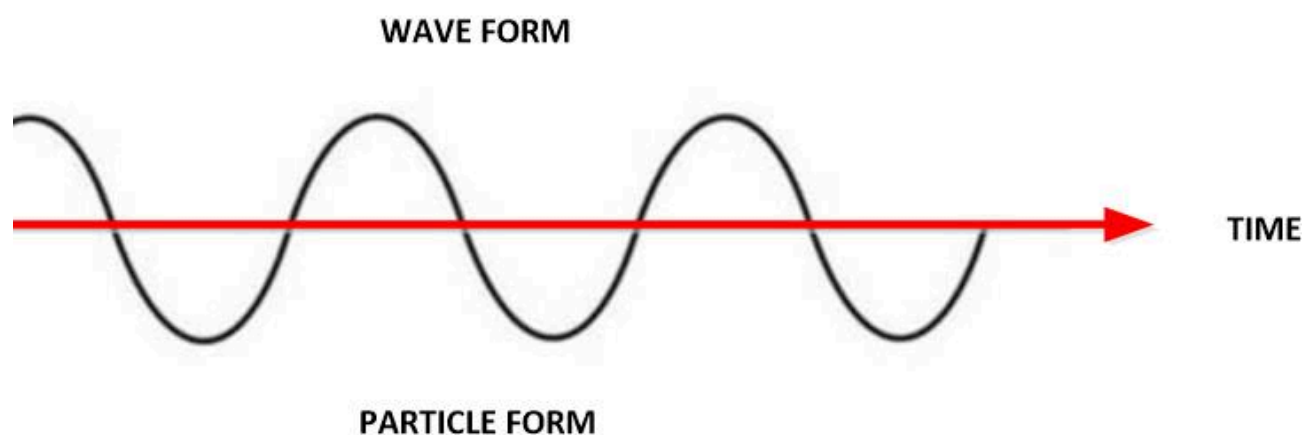

consciousness can be in two forms.

s are WAVE, and PARTICLE.

consciousness is outside the physical body, it is in the WAVE form.

consciousness is inside a physical body, it is in PARTICLE FORM.

consciousness is constantly following a sine path switching back and forth between WAVE
TICLE states.

thing that consciousness can do in the WAVE FORM is think.

thing that it can do in the PARTICLE FORM is operate a body.

have the dualistic nature of consciousness.

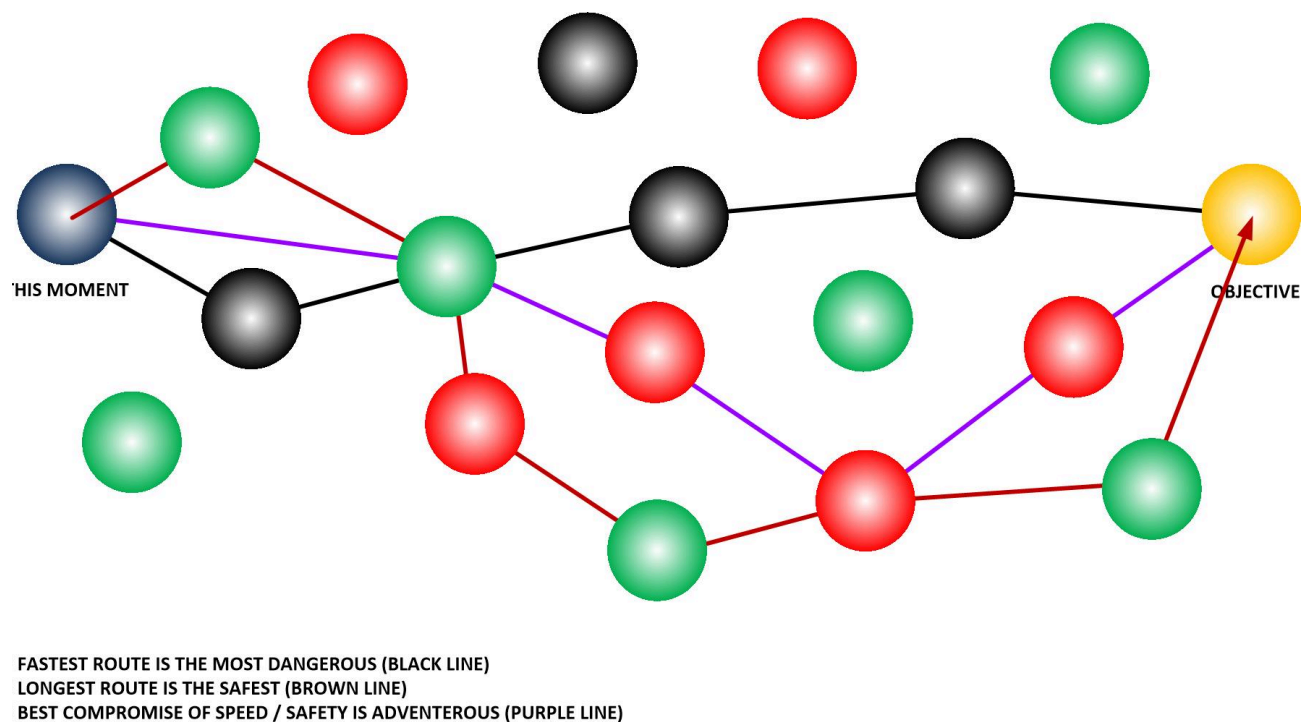

think “outside the box”; the physical body, and then apply those actions to make physical changes happen.

How We Navigate our reality

Look at it this way. Our reality changes and molds to what we think. I covered this over and over in other posts. Time is the movement of our consciousness as it moves in and out of the physical.

Of course, what we think thus changes our reality.

Our thoughts determine what world-lines we enter into. So if we are thinking wonderful things and are calm, and direct our energy into wonderful things, our life would be wonderful.

Movement through the different world lines appears as time. As we think, we select the world lines to migrate towards. We need to control and master our thoughts.

For people. If we are reacting to events instead of manifesting them, or if we hold grudges and negative thoughts... then our world experiences will become progressively darker and darker.

We generate memories.

Our thoughts shape our thoughts.

prior experiences shape the thoughts that we have. So they are crucially important to the of our life and our reality.

create memories.

ies influence how we think and what we think about.

ghts are influenced by our memories and the environment in our reality. So in order ome your immediate environment, you must overcome that influence and generate new chy thoughts.

Cypher knew that everything was an illusion. He knew that the steak was really just software code, but his body couldn't tell the difference.

Unless you are careful, there can be all sorts of surprises in the reality that you inhabit. There it is prudent that you take care and concern when mapping out your destination world-line.

and that it is far easier for me to describe things using diagrams.

In his first diagram, we see how a normal person (just living life normally) experiences time.

That number is around 4 world-lines every second. It's slightly faster or slower for different people at different times.

Now you know what "time" is, you can now understand that the "passage of time" is you coming in and out...

1...

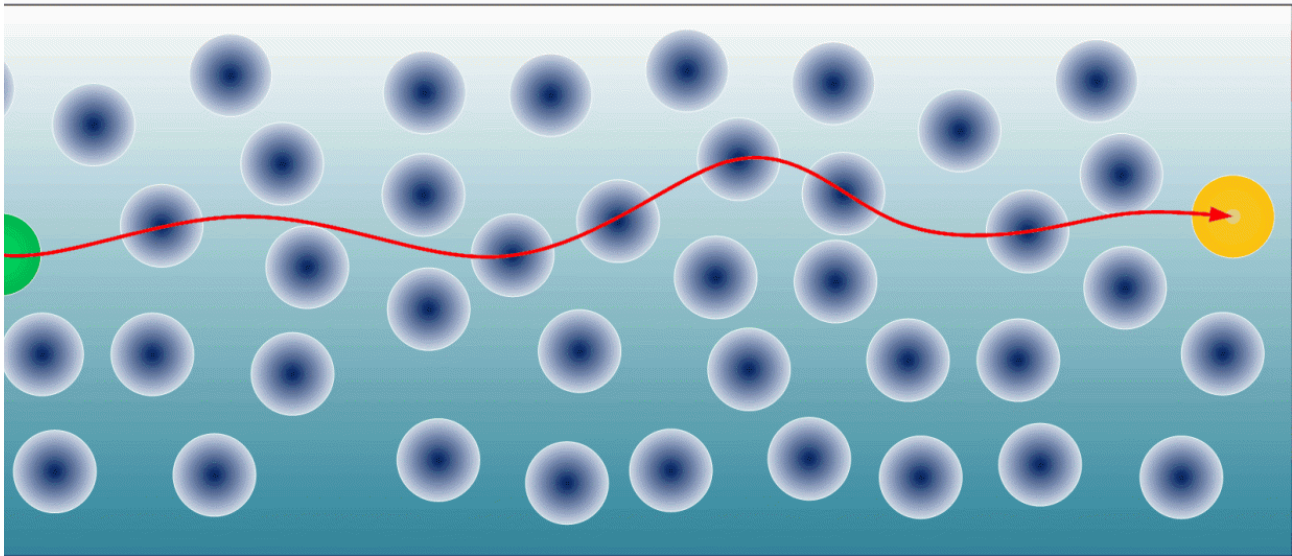

...of adjacent world-line realities.

The Matrix is a system, Neo. That system is our enemy. But when you're inside, you look at the world and what do you see? Businessmen, teachers, lawyers, carpenters. The very minds of the people you are trying to save. But until we do, these people are still a part of that system and that system makes them our enemy.

To understand, most of these people are not ready to be unplugged. And many of them are hurt, so hopelessly dependent on the system, that they will fight to protect it.

[The Matrix](#) (Laurence Fishburne), [The Matrix](#)

World-Line Travel – Known as “Time”.

we don't understand what time is simply because our understanding of what the universe is, is flawed.

There is no such thing as time. What there is, instead, is an infinite number of parallel universes, and we humans go in and out of each one at a rate of about 144 different universes a minute. Roughly.

For a person starting at a clock at 0, and then counting down to a clock saying 1 second, we would have passed through various adjacent realities without even knowing what we were doing.

Let's talk about how to map out the passage of time to get you to a destination; a reality that you would prefer.

Once, look at the following diagram.

We are currently in world-line reality “A”. It is shown in a green color.

We want to eventually have a new reality “B”. It is shown in a gold color.

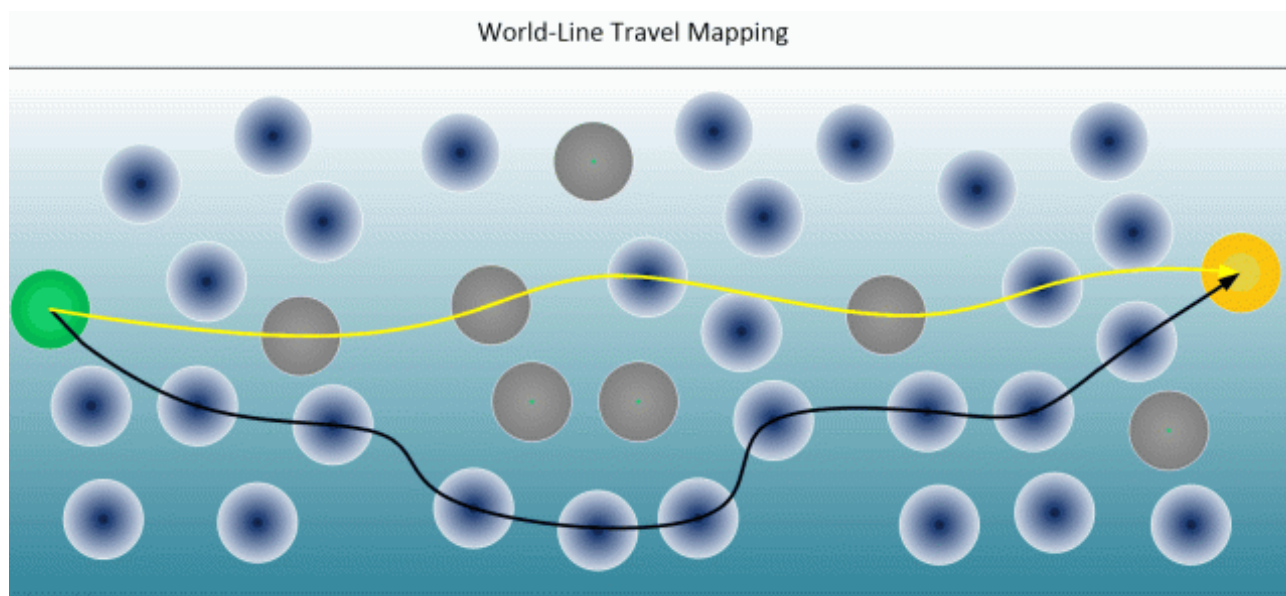

There are two paths marked out. One is yellow and one is black.

The yellow path is the most direct path. It will require fewer adjacent realities to pass through. The black path is the preferred path. It will take longer, because you will need to pass through more realities to get to it.

The reason that you want to take the black path over the yellow path is so that you can avoid those toxic realities. They are shown in grey.

These are realities that will cause you turmoil and distress that you do need to avoid if you truly want a great life. They include such things as car accidents, company layoffs, periods of medical bills, and death. You do want to avoid these realities.

Let's plan.

You are currently in world-line reality "A". It is shown in a green color. You want to eventually have a new reality "B". It is shown in a gold color. There are two paths marked out. One is yellow and one is black. You want to take the safe path in black, even though it will pass through more adjacent realities and take longer to achieve your destination. Those realities that are undesirable to you (sadness, hurt, pain, discomfort) are shown by grey colors. You will want to avoid them.

will not have any ideas or visualization of your desires, and the desires of others around determine what will happen to you. Don't allow that to happen.

When planning, you need to absolutely make sure of a number of factors. These are;

destination lifestyle. Clear and easy to visualize. It must be very detailed. There must be no guilt in it what so ever.

incorporate elements that will guarantee avoidance of problematic adjacent realities.

note. No this is not walking into a dimensional-portal and going in and out of world-lines. Instead, this is using the knowledge that every fraction of a second we move to a new reality as determined by our thoughts and the thoughts of those around us. This discusses how we "steer" our consciousness in and out of those realities to achieve our goals.

You can have anything you want. But you must imagine it. You must think about it. You must manifest it. Otherwise, the thoughts of those around you will determine what will happen to you.

Power of our thoughts.

"I have to let it all go, Neo. Fear, doubt, and disbelief. Free your mind." *The Matrix* – Morpheus (Keanu Reeves)

Nothing can stop you from accomplishing everything that you have dreamed of, once you believe that something is possible, it becomes possible. Fear stunts our ability to succeed in our professional and personal lives.

The “reality” universe consists of an infinite number of frozen moments of time, or world-lines.

ates to the next world-line based on the highest-probability occurrence.

ighest-probability of occurrence is a pre-established vector that the consciousness follows
endent of thought.

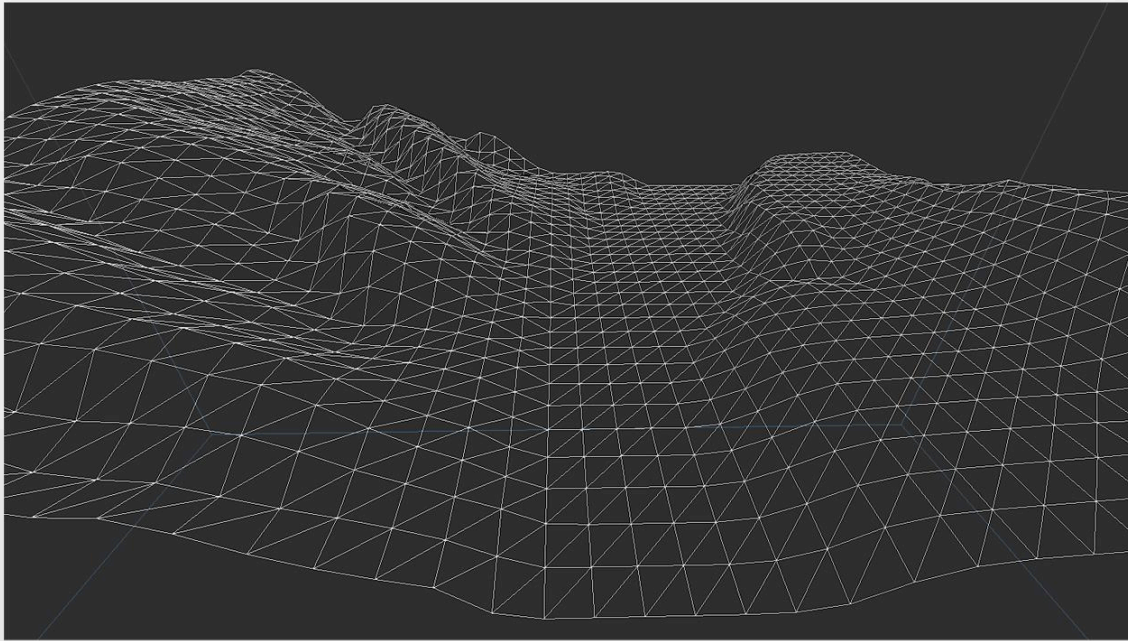

all this the “world-line pre-birth template”.

e **fated direction** that your life will unfold towards as your consciousness rides the
cal body life-time. It is critically important in what your life will present to you to experience.
ast that is what your very own soul expects.)

ould be an infant, brain-dead in a vegetative state, or mind dulled by drugs and abuse, but
ector path of the life that you will live will be following the pre-mapped out “pre-birth world-
mplate”.

e system that your soul establishes for your consciousness.

e way for your consciousness to obtain experiences.

The pre-birth world-line template can be visualized as a three dimensional topographical mesh.

to navigate the world-lines

thoughts are the ONLY thing that the consciousness can create.

thoughts act like a magnet to the most similar world-lines. The thoughts form a “shape” or yet, a “profile” that surrounds the consciousness. And the consciousness automatically moves towards the world-lines that match that profile.

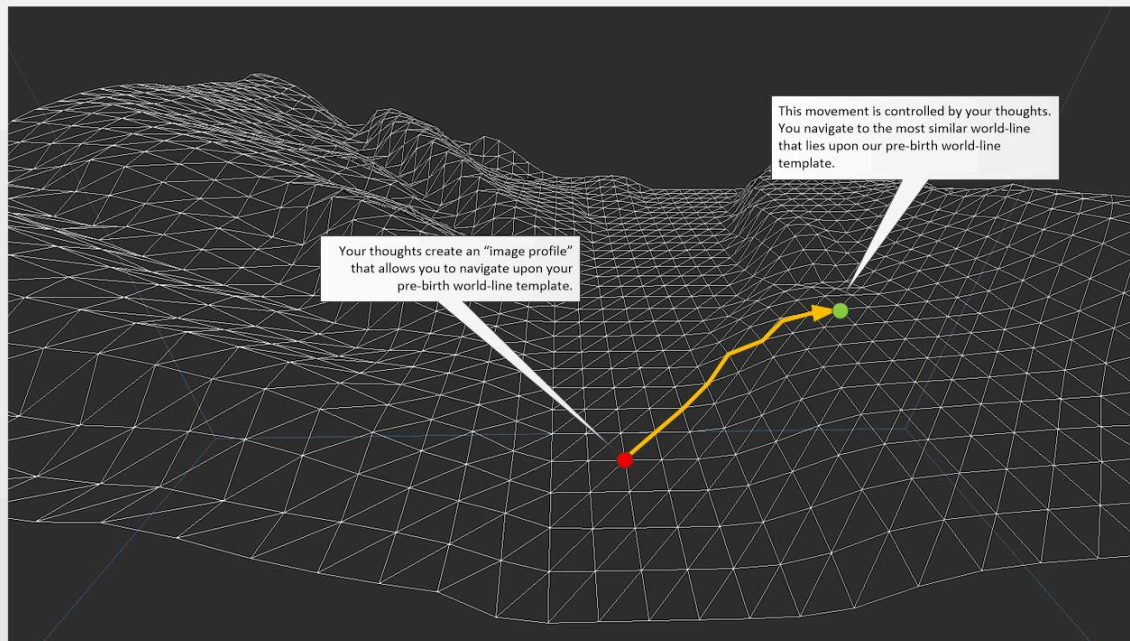

is a basic activity that describes MOVEMENT UPON the pre-birth world-line template.

does not describe movement off the pre-birth world-line template. That requires a different mechanism for movement. (A similar mechanism, but fundamentally different.)

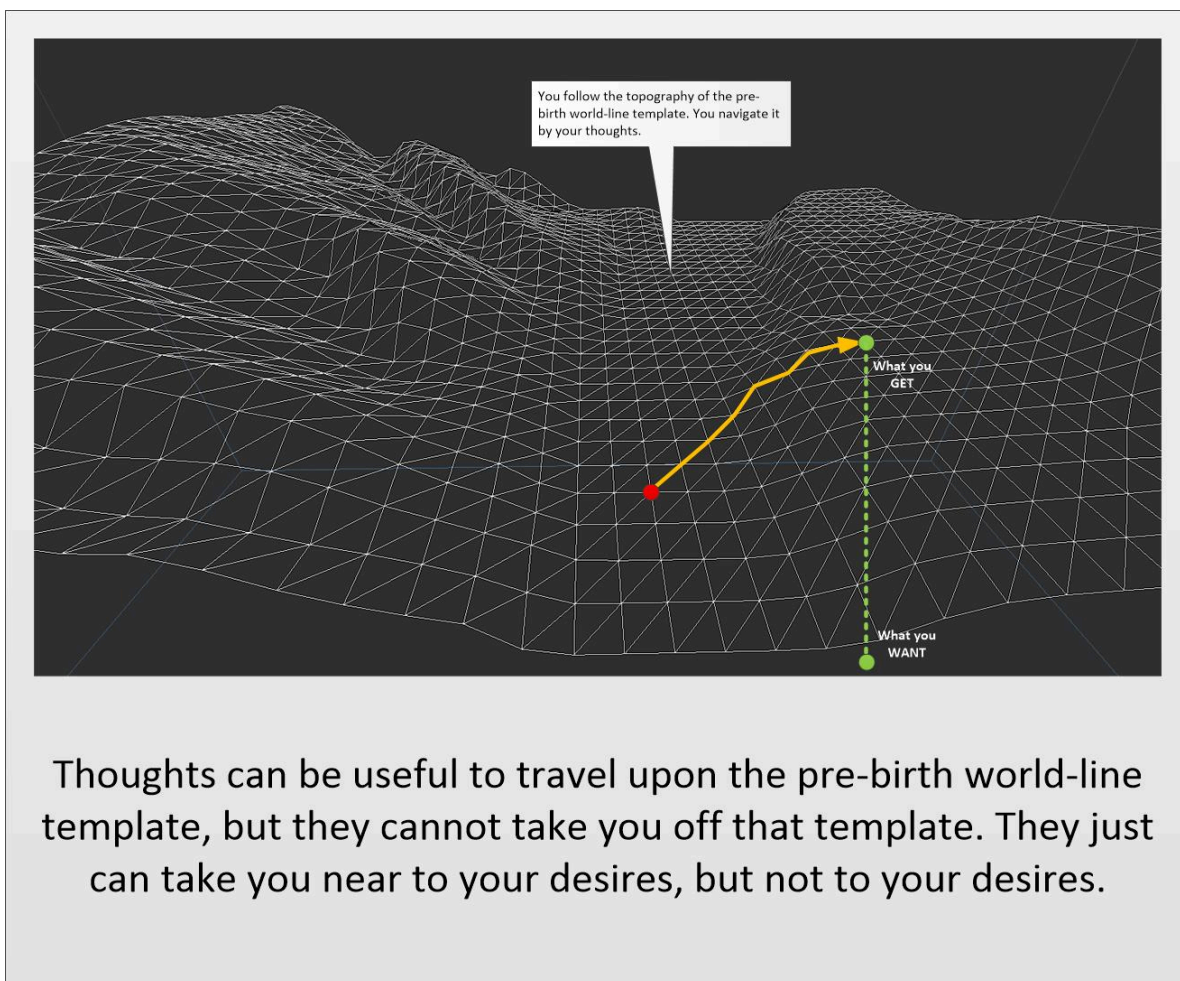

thoughts alone, without any further actions, can navigate upon the pre-birth world-line template. It is what is known as a “fated life”.

If you rely on your thoughts alone to navigate, you will find that your life seems to be “fated”. You might wish and yearn for things, but they never materialize. You might think about that guy or gal at the coffeehouse, but nothing will really manifest. Your life will just follow your mapped out life.

thoughts might move you close to certain areas, but it won’t take you to where you want to

Typically your thoughts create an image. This image is then paired up with the most likely "nearest" world-lines that match it. Thus we travel from thought to thought, and from world-line to world-line upon this mapped terrain; the pre-birth world-line template.

ement off the Pre-Birth World-line Template

situation describes you...

you think, wish and dream for things, but they never materialize. It seems that your is fated to some degree.

you are “trapped” following the pre-birth world-line template.

do not want to follow the fated life that has been provided to you, then you will need to orate additional measures to navigate the MWI. You will need to navigate off the pre-birth line template.

are two main techniques to do so.

Verbal Affirmations

lides

NOT a physical body. We are soul that manifests a consciousness our reality.

and realizing this, makes some of the passages in the religious books far more reasonable, or to understand. It doesn't matter if it is the Koran, or the Bible. Understanding the way the works, and truly works, adds a far greater understanding to the wisdom that resides inside great works.

creates a "consciousness" that it places in a "container". This container is a "world-line". "universe" is a near infinite number of world-lines.

We appear to be living and breathing individuals. For that is the physical component of the reality that we inhabit. It is the world-line that exists for us.

In reality, we are soul. As soul, we are timeless and universal. We occupy a reality when ever we want and achieve life lessons and experiences from it.. It is so easy to forget who we are when the day to day problems of our physical reality manifests around us. But, never forget that we are soul, and that we are a soul consciousness that inhabits this physical body.

al) is (for most humans) about 4 Hz. Or, four cycles per second. (Four world-lines each

well understand the movie projector analogy, can't you?

1, well good for you! Award yourself a gold star.

This is an illustration of what time actually is. Time does not exist. It is a perception that our
consciousness has as it moves and weaves in and out of different world-lines. Here we use an
old-fashioned movie reel projector to help illustrate this understanding.

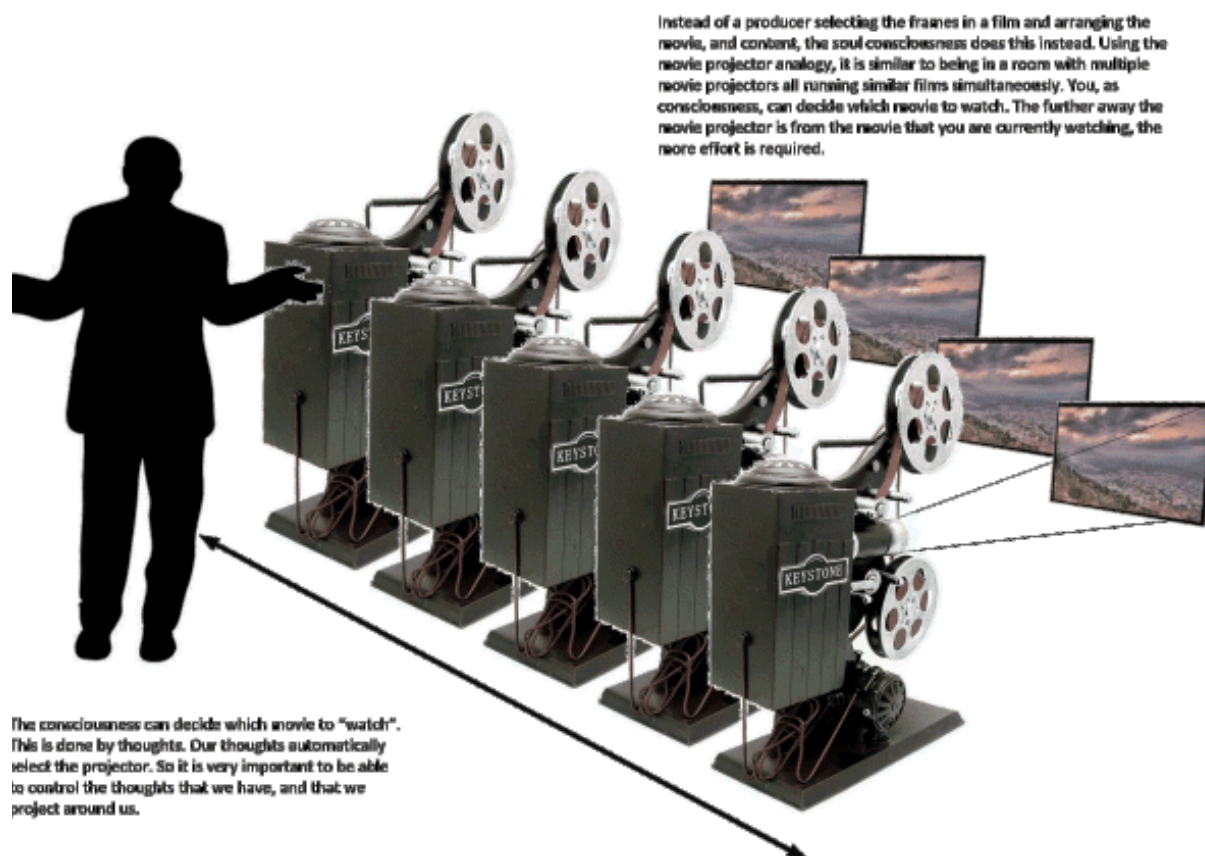

Movie Projector Theory in more detail...

them with that analogy (and it is a really good analogy), that that it does not take into the individual frame selection in the film role. For in actual contemporaneous movies, it is the producer that selects the individual frames, and the person just sits back and watches the

it is more like an entire bank of projectors, and we (as soul) selects the movie that we want to watch.

In this model, we have numerous movie projectors, all running simultaneously (at the same time). .. Ah! At the same time.

You can “jump into” any scene portrayed by any of the movie projectors at will. We just look at the images.

Instead of a producer selecting the frames in a film and arranging the movie, and content, the soul consciousness does this instead. Using the movie projector analogy, it is similar to being in a room with multiple movie projectors all running *similar* films simultaneously. You, as consciousness, can decide which movie to watch. The further away the movie projector is from the movie that you are currently watching, the more effort is required.

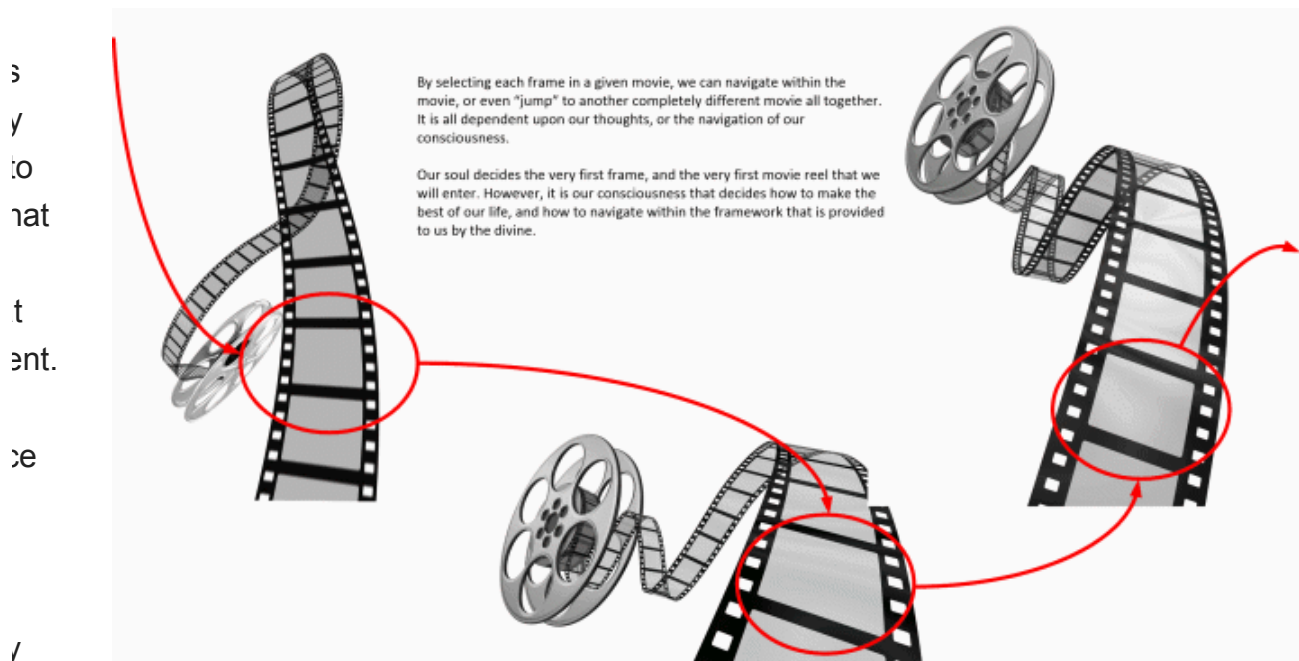

or it is to watch that movie. So we must watch closer movies (momentarily) and then “edge closer to the movie projector that we are interested in.

ple, sadly, do not do this.

w the movie projectors to operate randomly and they find themselves watching movies that not really care for.

manifests

this film / movie projector analogy further it is exactly how our consciousness selects the rience” that we obtain. Each frame in a given movie reel is a world line. They are all playing ultaneously, and our consciousness selects the world-lines to occupy by hopping from frame. (World-line to world-line.)

By selecting each frame in a given movie, we can navigate within the movie, or even “jump” to another completely different movie all together. It is all dependent upon our thoughts, or the navigation of our consciousness.

Our soul decides the very first frame, and the very first movie reel that we will enter. However, it is our consciousness that decides how to make the best of our life, and how to navigate within the framework that is provided to us by the divine.

se gets larger and larger and larger.

ny it doesn’t seem like we are moving from one world-line to the next. It seems smooth, and transparent. That is because the deviance in nearby world-line (projectors) is very,

II.

Thoughts select the world-line...

the “film spool” (a collection of “frames”) is known as the “life experience” of a given person as it takes on a life.

Order of our travels in and out of different world-lines. Where a “world-line” is represented as a path within the movie reel.

Individual “frames” that are selected, are chosen by the thoughts of the consciousness that inhabits the body. We migrate to things that we think about. We migrate to what we think about.

Necessarily what we might desire. It is what occupies our thoughts most of the time. (So shut off mind-manipulative television, why don't ya!)

Due to its popularity, Facebook isn't without its share of scandals. In the latest one, which came out of an experiment conducted on 700,000 Facebook users over the period of a week in 2012. News feeds were manipulated to contain positive or negative news and then users were monitored to see if the change made them use more positive or negative words in their status updates.

It worked—people's status updates [showed a change in emotion](#) that went along with the news that they were exposed to.

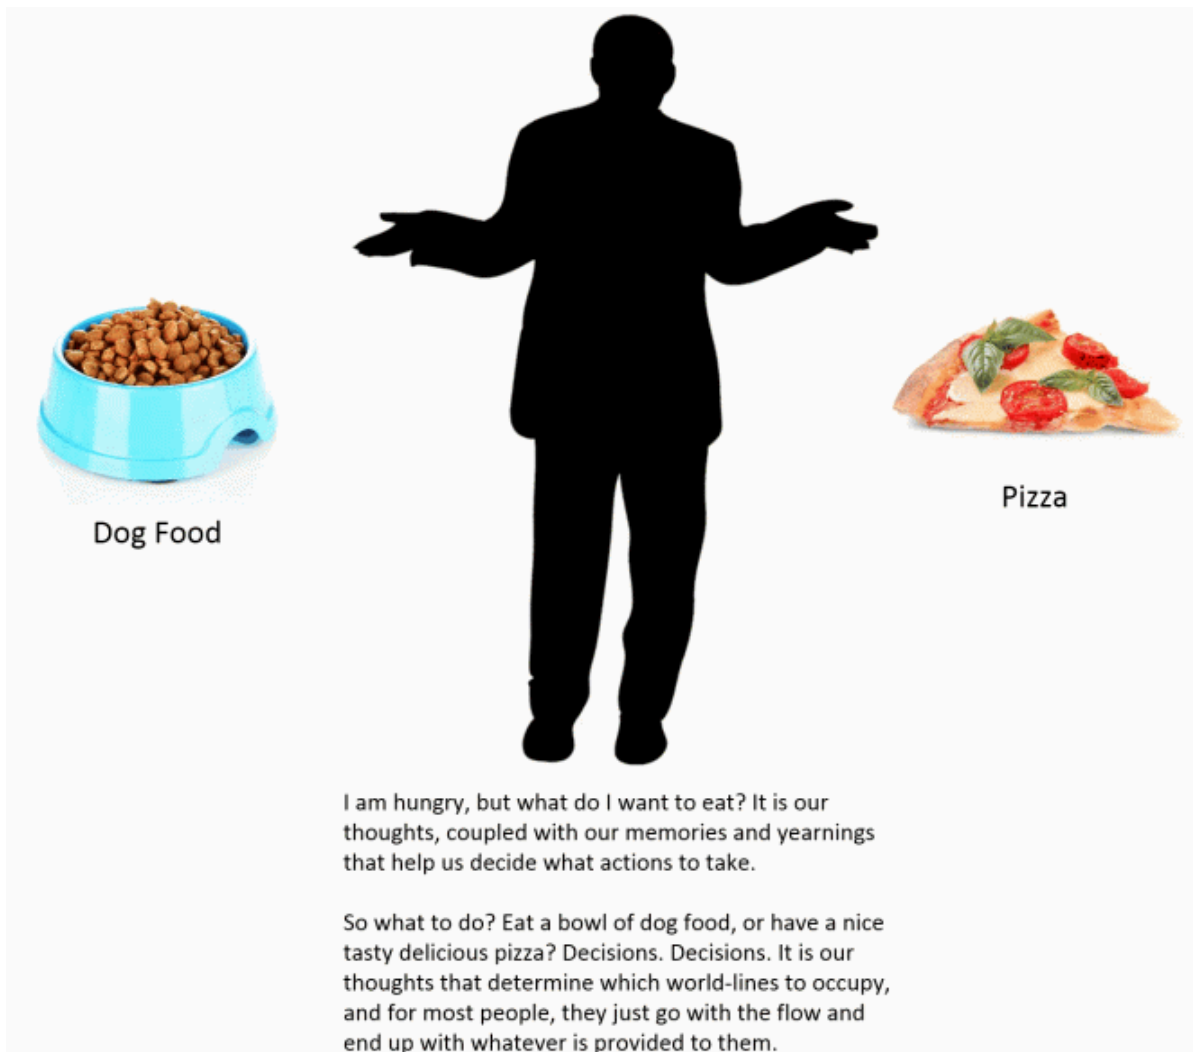

What was used was “emotional contagion,” and it confirms something pretty frightening.

According to the study, people don't even have to be physically around another person in order to absorb the negativity into themselves—negativity can be “caught” just from looking at a computer screen.

[Doesn't need to be](#) a personal, emotional connection for emotional contagion to occur.

Surprisingly, the study has brought up a number of disturbing questions, and it's now being investigated by organizations like the Information Commissioner's Office in Dublin. Questioning the ethics of the study state that it's nothing less than psychological manipulation. As if that's not shady enough, Facebook users were unaware that they were having their emotions and moods manipulated through another party controlling just what was [shown up in their news feeds](#).

[The case](#)

I am hungry, but what do I want to eat? It is our thoughts, coupled with our memories and yearnings that help us decide what actions to take. So what to do? Eat a bowl of dog food, or have a nice tasty delicious pizza? Decisions. Decisions. It is our thoughts that determine which world-lines to occupy, and for most people, they just go with the flow and end up with whatever is provided to them.

thoughts are the same...

One of the problems that people need to come to grips with is that thoughts are not equal. Thoughts are "weighted". Each thought is different. And thus each thought has a different degree of influence in the selection.

Thoughts and emotions together form a complex stew of "influence" that can absolutely affect your travel adventures.

Thoughts are comprised of "levels of influence".

Continuation of thinking about something.

Emotional attachments with the thoughts.

Thoughts and emotions together form a complex stew of “influence” that can absolutely affect your world-line travel adventures. For instance, consider the scenario of you being hungry and desirous of eating a fine New York style pizza. Now your enjoyment at eating that pizza will depend on your emotions at the time. Obviously you won’t be able to enjoy it if you were angry, now would you? Our emotions, our memories our physical health and other factors all work together to influence our world-line navigation ability.

es.

s thought manipulation (Have you been paying attention to the news lately?)
s inherent belief system.

o thoughts are equal. They have a “weighed” value or influence factor. Further, they are

our

eepest belief systems that have the greatest influences in our thoughts.

very important subject, and I will cover it later on.

let's look at things simply.

that all thoughts are simple, unique and they can easily select the “frames” or world-lines
onsciousness will migrate to.

It is our deepest thoughts and core belief systems that have the greatest influence in thought direction and world-line selection. For no two people are the same.

Actual “landscape” of the MWI as viewed by the individual consciousness.

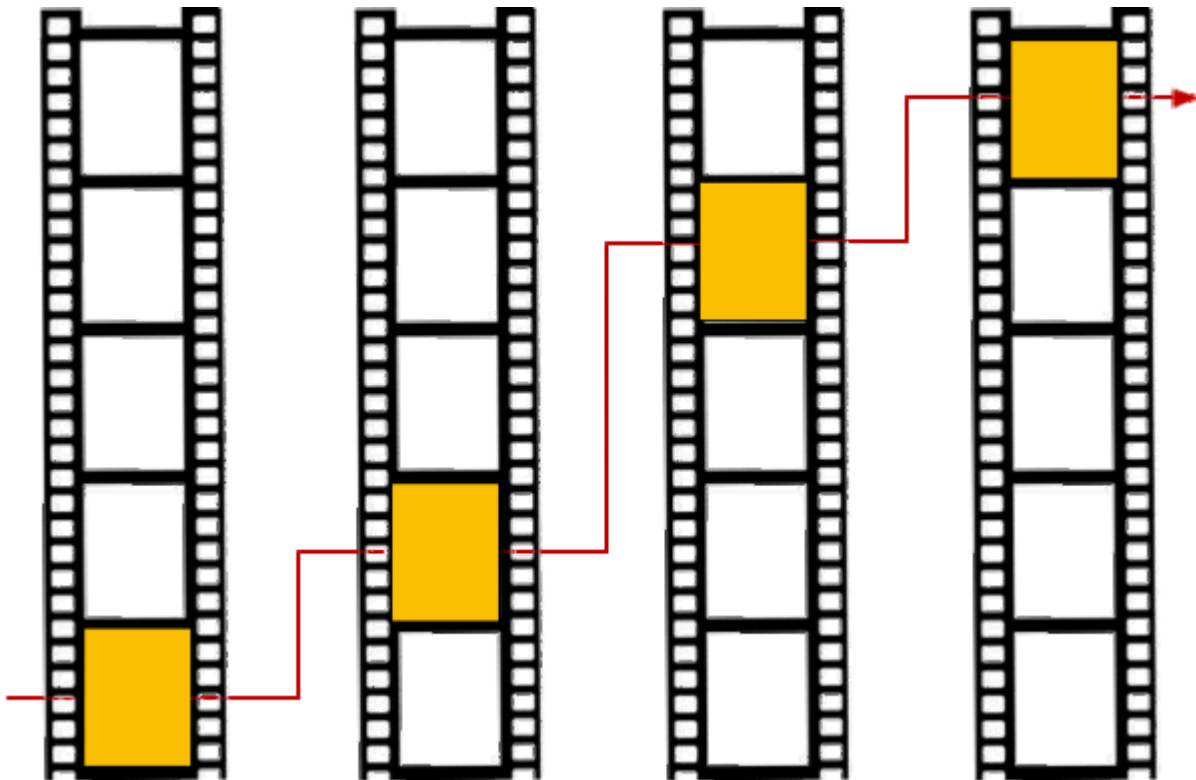

It is a “road map” of nearby world-lines.

What would it look like? What would it resemble? How would we be able to take into account different variables that are constantly shifting and changing all around us?

Well, it would have a form of sorts.

Imagine (as an illustration) globes representing a given “world-line” (or “frame” in the movie analogy above). It would also have lines. The lines would represent a path of migration. These would be the most probable paths for a consciousness to take when moving from one world-line to another.

This is a pretty good analogy as far as it describes the path that a consciousness would take. However, this analogy ignores the world-lines that are not taken. And in general, there are millions or even billions of world-lines that are constantly ignored.

Movement in and out of the world-lines in the MWI by using the movie projector analogy to describe the way that consciousness moves in and out of different world-lines through thought.

ework.

way from the movie projector analogy and mapping it upon a three-dimensional grip, it looks something a little like this. With the positions of the world-lines geographically positioned to the pathways as a function of the intrinsic value of the particular world-line.

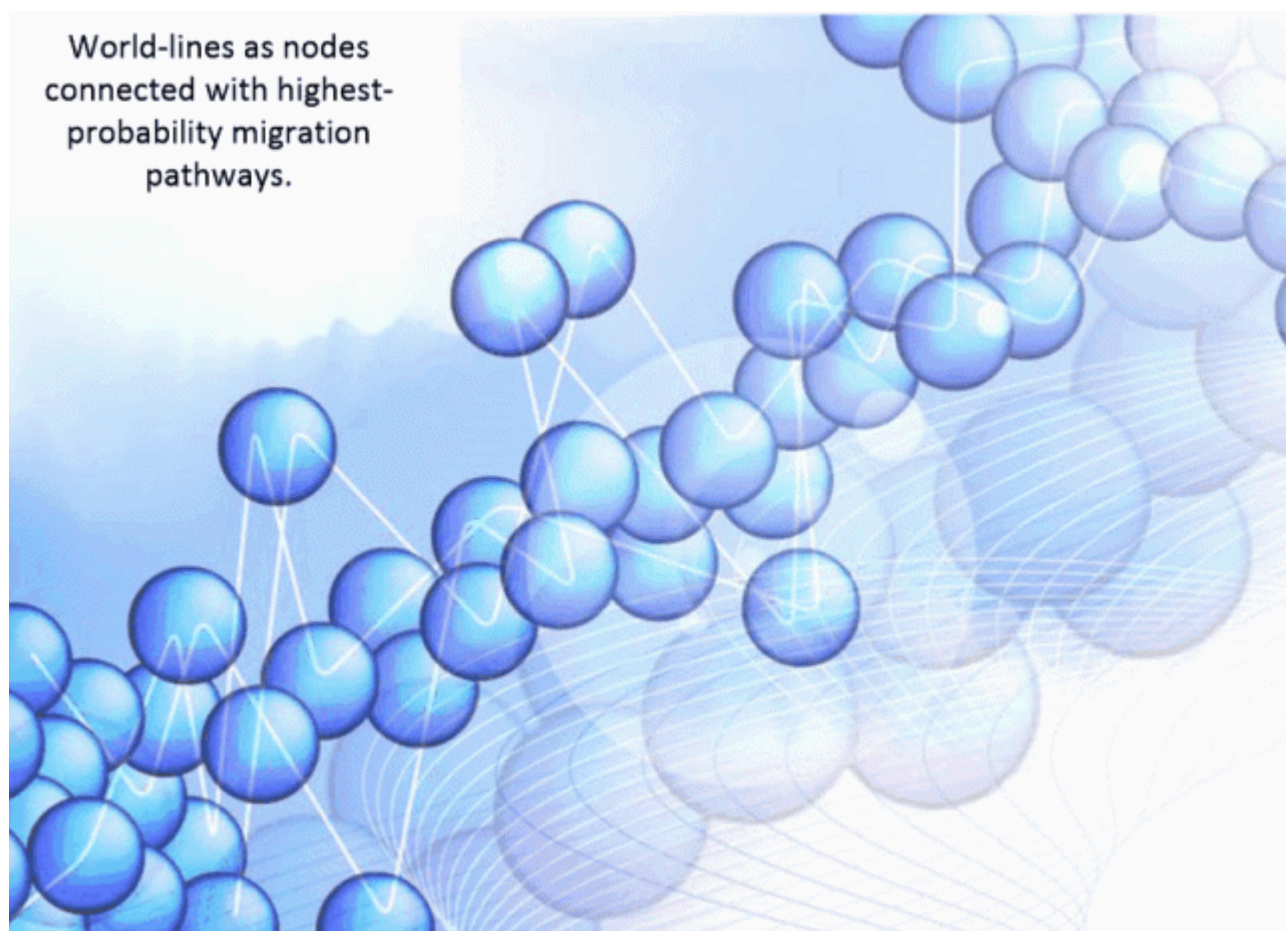

it would not look so much like a cluster of grapes, or bubbles on a foamy sea of bath foam.

out that the **highest probability pathway** forms a kind of sheet or flat surface when plotted in the three dimensions.

and up plotting everything, you can't make out heads or tails of the map. It's just a big mess. But, if you plot the pathways that have the greatest probability of occurring, it simplifies immensely.

If a cluster of grapes, it would look a little like a mesh or a grid. With the points being world-lines and the lines connecting the points as the shortest distance to that world-line.

When you take a step away from this "map" of "world-lines" and their lines of "high-probability" consciousness transfer it might start looking a little like this.

The path that consciousness takes might be just as well placed on a map of sorts. This map might show nodes and paths where the consciousness might migrate depending on thought manifestation, generation and progression.

And the strength of character needed to traverse affecting the heights and valleys of the surface.

pace" that this map forms is the HIGHEST PROBABILITY of consciousness movement from world-line node to another.

going *above* the surface indicates a strength of will over the combined strength of inertia of a given world-line.

going *below* the surface indicates a weak strength of will and a consciousness being overwhelmed by the inherent inertia of a given world-line.

Finally...

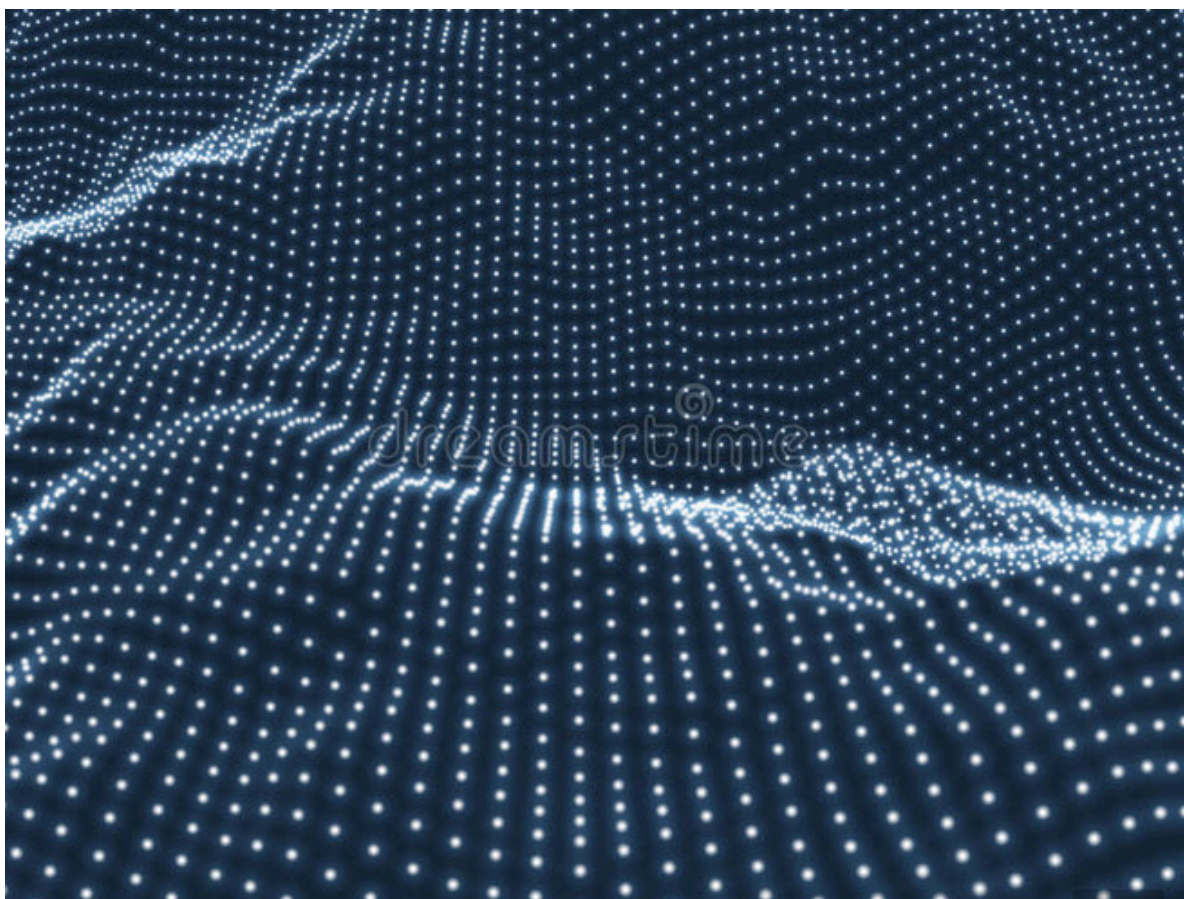

Moving to the *left* upon the mapped surface indicates more freedom of movement upon a given world-line reality.

How the world-lines with consciousness migration paths might look when a person takes a larger overview. You will see that the map is not a flat surface, but rather undulates.

rdin
iles

It forms hills, valleys and “mountains”. This surface is the “geography” of the world-line transition map. Each possible destination world-line would have a different value of “potential”. Which is a potential for the consciousness to move towards it and occupy it.

travel forth on the MWI.

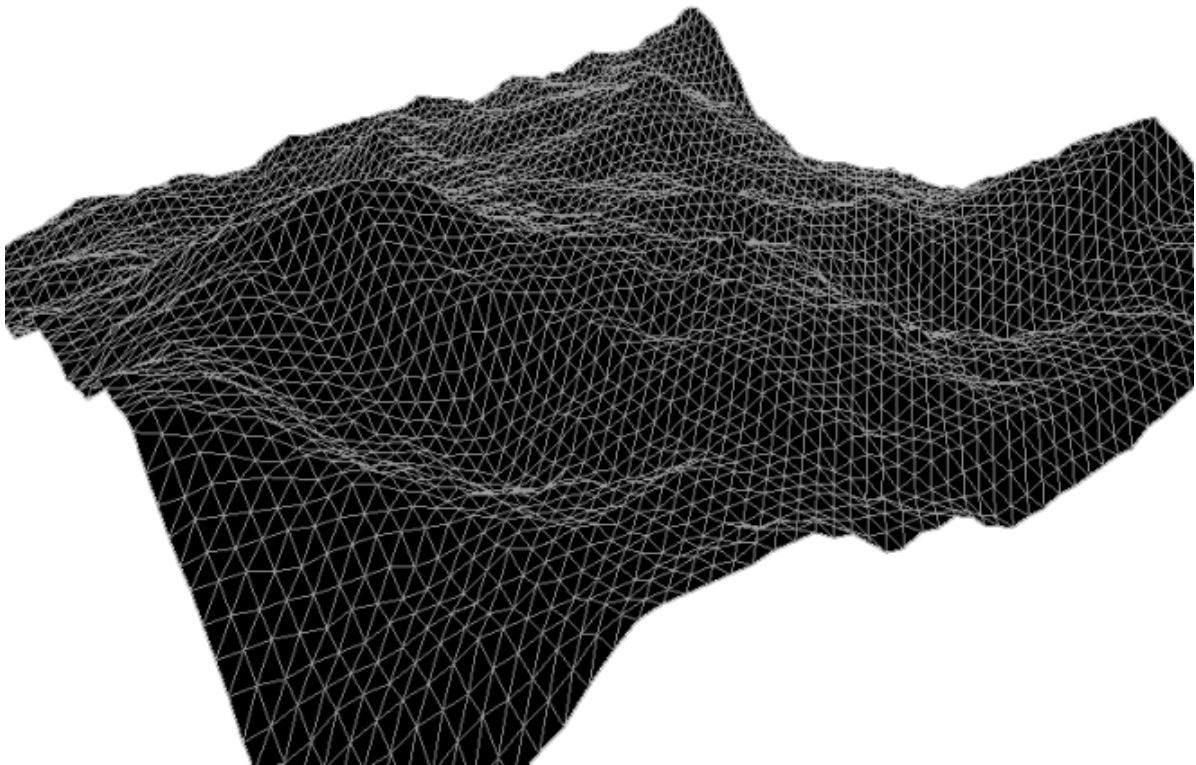

The movement on the topographical map of the highest probability paths is accomplished via thought.

er, the rate of travel is fast...

is, however, that the rate of travel through each world-line in the MWI is quite fast. It is our world-lines per second. (For some people it is much, much higher.) Thus, for any map to be of any use, it will have to exist on a much larger scale than what is shown here.

the individual world-lines would appear as tiny pixels, and for the map to be of any use, it would describe a travel duration in terms of weeks rather than seconds. This means that the map would look like a smooth gradient rather than an array of “floating” globes.

MWI geometric map showing an array of highest probability world-lines in a seven second cluster of time. As the resolution increases the similarity to geologic topographic maps increases. Often these maps resemble landscapes and other recognizable surfaces.

fig the surface.

are going to take a look at the way the landscape actually looks from the point of view of dual consciousness. It is NOT simple and flat. It is undulating with all sorts of “nearby” things that the thoughts can select and migrate towards.

Well, it might look something along these lines...

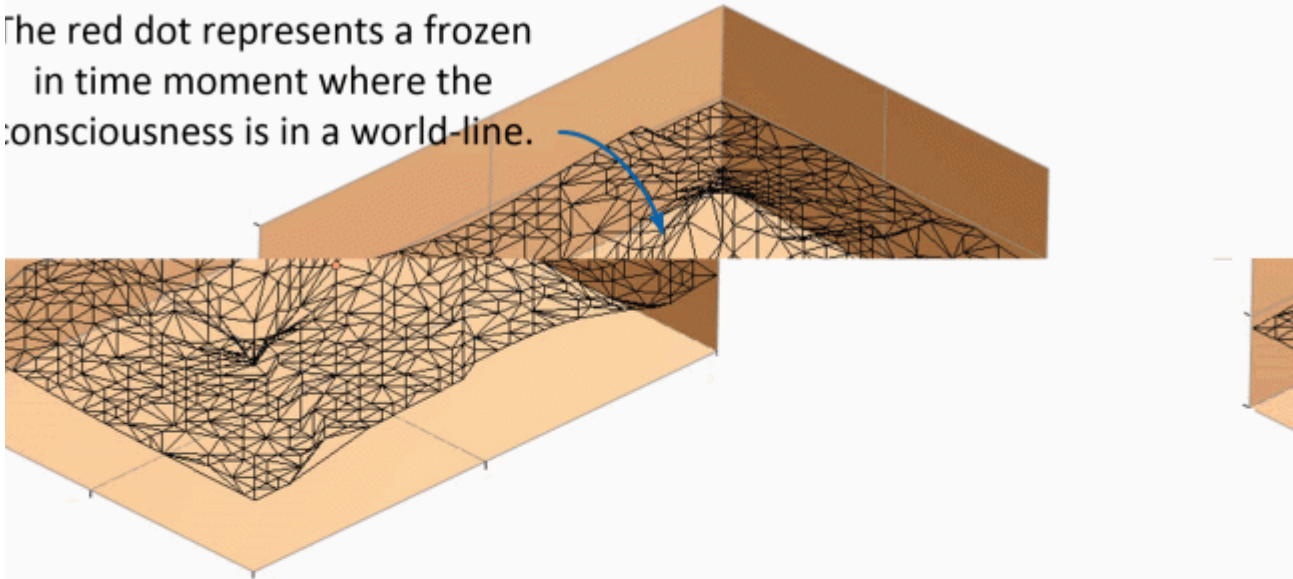

this topographical map is much more complex and complicated. However, I was able to (initially) navigate it using a sort of simple 3d understanding, and that understanding is one that I will share here. Yes, these are my conventions distilled and illustrated as a teaching aide.

What I look at it is the substantially simplified version that I am accustomed to using.

Because this is a very simplified diagrammatic representation, numerous variables are represented in the “X” and “Z” axes. (Not to mention the entropy axis “Y”.) In general, as I understand it, the characteristics of the “X” and “Y” axes are an algebraic sum of the inverses of the contributions to the axes elements.

Now that I lost you. Just think of it as a sum average of all your thoughts.

The red dot represents a frozen
in time moment where the
consciousness is in a world-line.

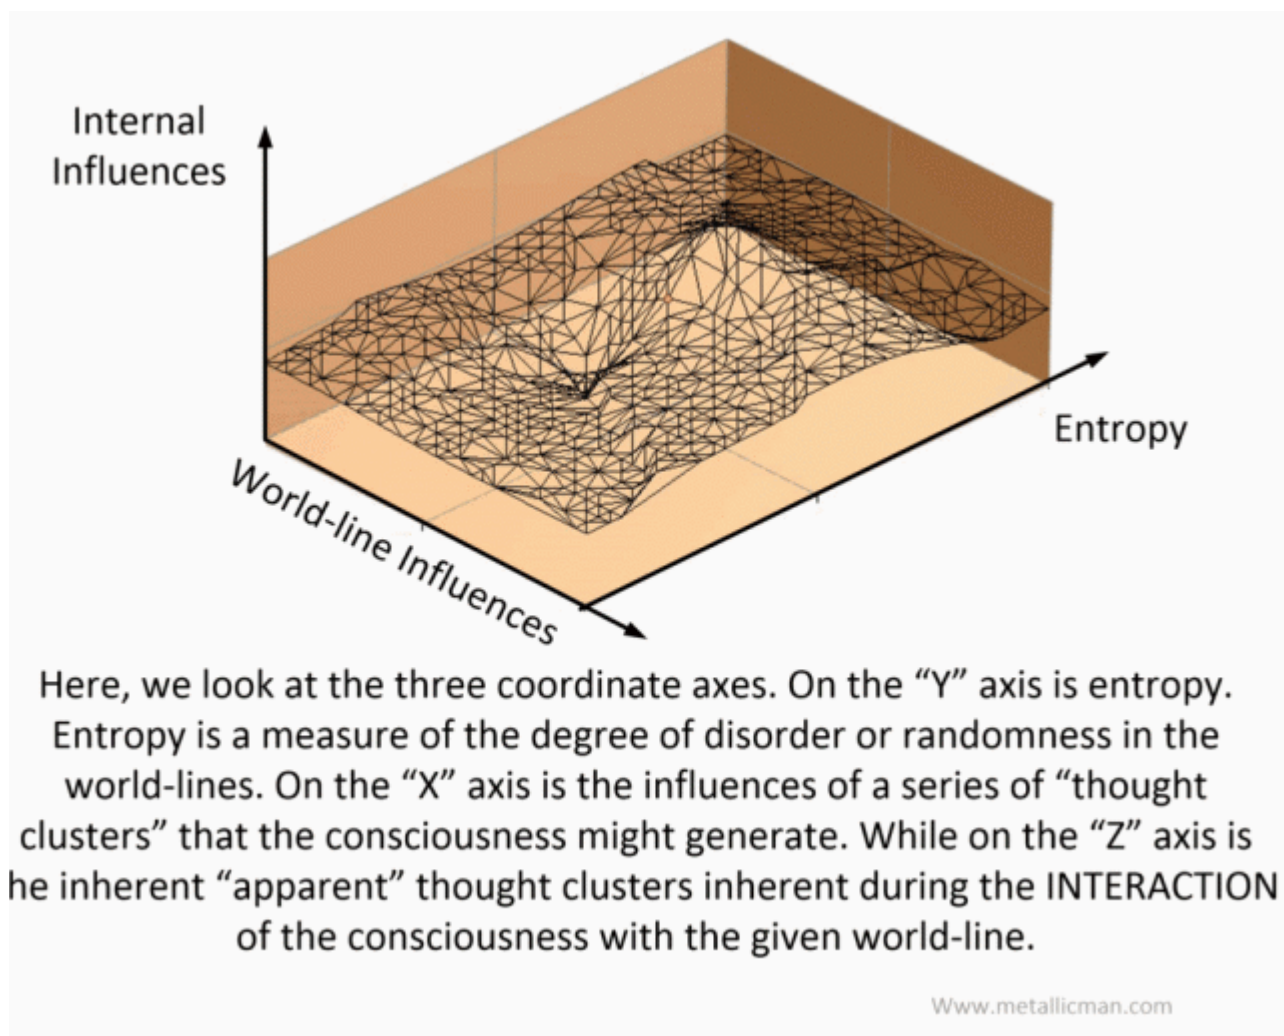

al MWI appears from the point of view of an individual
ice that there is no axis for time. Time does not exist in
reality outside of a given world-line. For within the
e the reality is ψ -ontic. As such, our minds interpret the
around us as wholly ψ -ontic, and thus we experience
"time".

The general topography of the MWI.

The meanings and purposes in the three-dimensional topographical portrayal.

I Influences

Influences should be understood as the ultimate result of comparative thought-driven MWI as by the given consciousness.

The mind has a wide selection of thoughts. Everything from anger at a spouse, to frustration at work, and influences in the news, to a loving thoughts related to romance. These thoughts will work together to generate a (singular) "value" on this axis.

It is more than that. It is also the weighed value and the intensity of the thoughts, with the apparent carry-over duration longevity of the thoughts as a person migrates through the other world-lines.

Keep it simple.

If you drop a slice of pizza in the middle of a muddy road, would you [1] pick it up, wipe the mud off the pizza, and eat it. or [2] say "heck with that", and leave the pizza in the road as a lost cause.

For most people, they would give up and abandon the slice of pizza.

it of mud is far too distracting to enjoy the slice of pizza. That is that way this works. For if you abandon the slice, like most people would, you would occupy a place on the surface of the undulating map.

er, against all probability and convention, you decided to eat the slice, you might end up above or below the surface, depending on other factors.

For example.

pose that you are a simple fellow and you have five things going on in your life.

ouse that wants a divorce.

ss who is hinting on firing you.

arning for a club sandwich and an ice cold beer.

t that loves you and is very loyal.

ories of fishing with your father.

ample, some of the items would have more emotion attached to it than others. While others might be better at controlling your emotions and directing your thoughts. While still others might be able to erase the thoughts completely (if for a short period of time).

It might be an emotional wreck and your thoughts would manifest a life that would reflect your

side, drugs and other stimuli can also influence thoughts and behaviors. All of these factors can alter the navigational ability on the MWI.

no way to judge which thoughts or issues affecting the thoughts would have the greatest influence on the person because it is their deepest internal core belief systems that would result in different world-lines would manifest.

one can assume is that all the factors would be weighted together and balanced through the different systems of the soul / consciousness. This would influence the momentary section of the world-line.

Consider that when things start going wrong, that they often end up spiraling out of control?

via a “Z” axis vector. You will also notice that the “arrow of time” [4] moves along the direction of decreasing entropy.

Entropy is a measure of the amount of disorder in a system. Entropy increases as the system's energy increases. For example, when an ice cube melts and becomes liquid, the energy of the molecular bonds which formed the ice crystals is lost, and the arrangement of the molecules is more random, or disordered, than it was in the ice cube. We can assume that a [macrocosmic](#) universe, that it can be best represented as time.

gration process.

consciousness moves from one physical body in one world-line to another in a different world-line. For most humans, most of the time, the rate of travel is around four world-lines per second.

Int;

When using "the power of intention" to manifest your reality, what you are doing is moving on a destination world line. If you track your success or failure in this effort, you can discover the amount of time it will take for your intentions to manifest.

For example, if you work 6 months, then that means that you had to pass through 62,208,000 (more or less) world-lines to arrive at your destination world-line.

That's around 10 million world-line transitions per month.

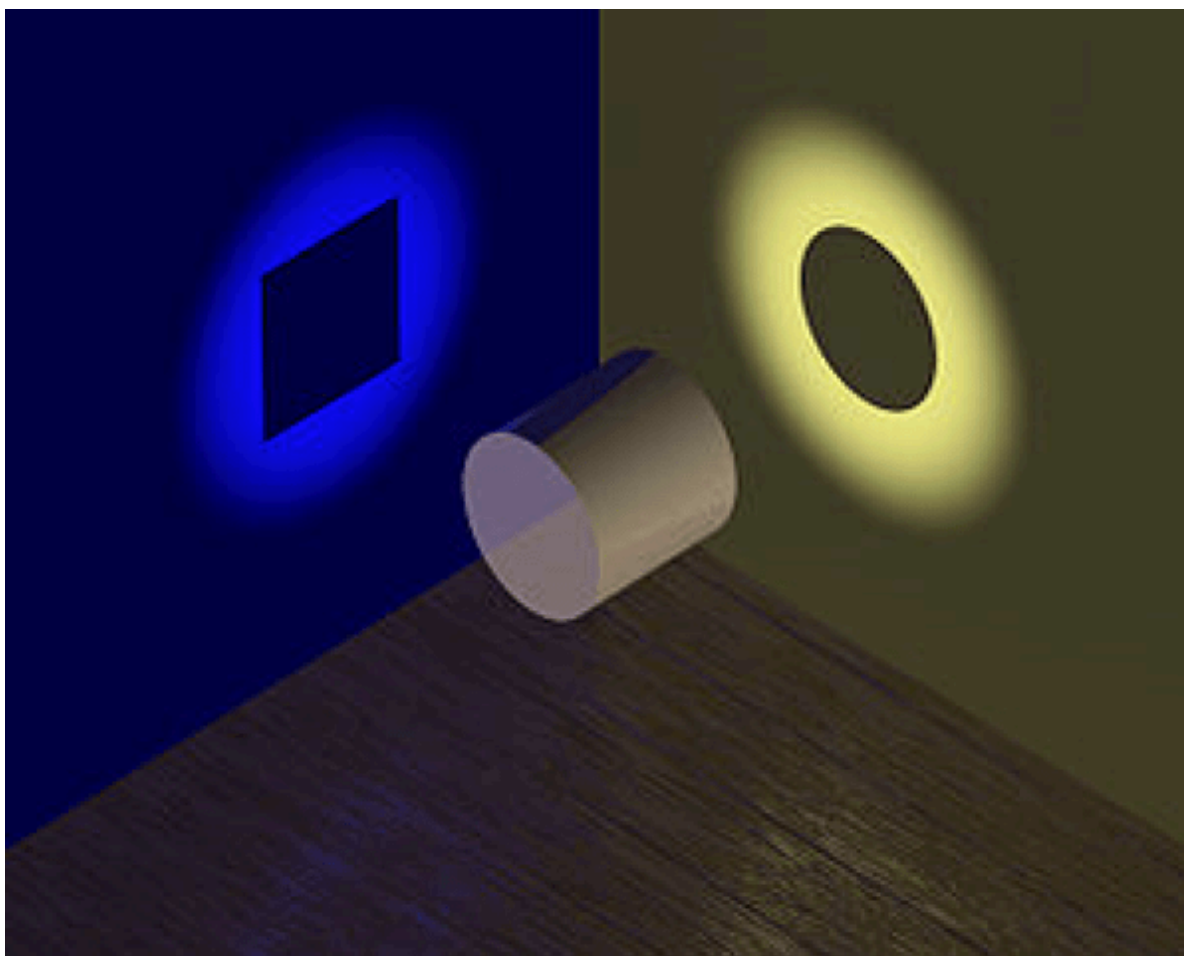

The fact that consciousness is able to move in and out of the various world lines is thought of as wave-like behavior.

When it is in a given world-line, the consciousness occupies the body in the **particle form**.

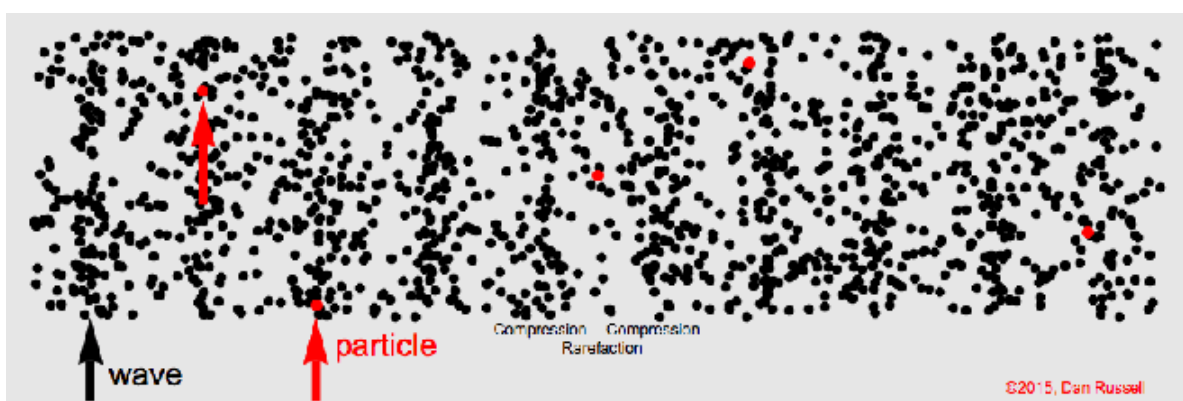

When the consciousness moves from one world-line to another, it is no longer occupying a body. It is thus in a **wave form**.

This process happens rather quickly. In most people, mostly the rate of travel from one world-line to another is around 4Hz. For most humans our brains have a difficult time observing the changes in

nts.

ere.

It is not that a quanta changes, it is how the observer views the quanta that makes the change. Our soul controls consciousness. Consciousness can be in different states depending upon the point of view of the person (the observer). Here we can see that the two apparently different states are one and the same thing, depending on the point of view of the observer.

Wave and particle duality and illustration.

try process

ow the consciousness changes from wave to particle for entry within a body within a reality. consciousness naturally exists in the wave form.

the moment it “crashes through” into a fabricated world-line reality, it changes form. It a particle. It’s a natural process.

s is how the consciousness changes from wave to particle for entry within a body within a reality. The consciousness takes on the particle form in order to operate the physical body and exist within a reality or world-line reality. Otherwise, it operates in wave form outside of the body.

tic operations (slides and dives)

is, if you are in MAjestic, and are engaged in the role like I was in, your visualization of the ping would be quite different. I was often not allowed, or permitted, to live a “normal” life capabilities. ‘

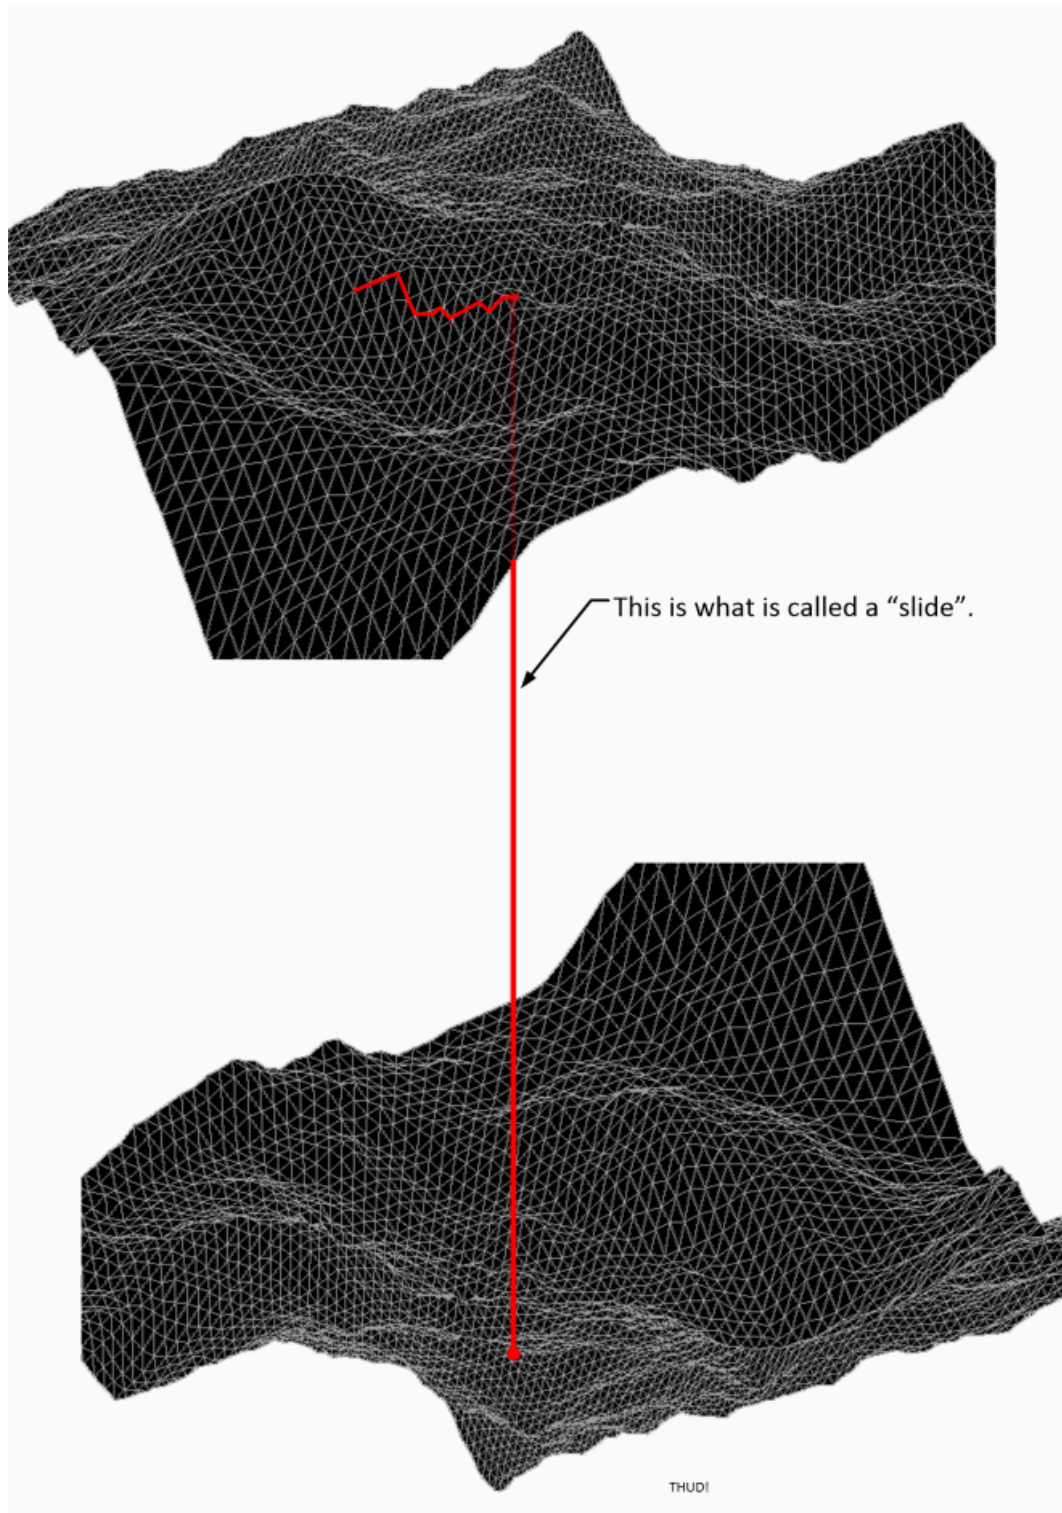

was often pulled off my life track and immersed within a completely different reality.

ie reasons why it sucked to be me.

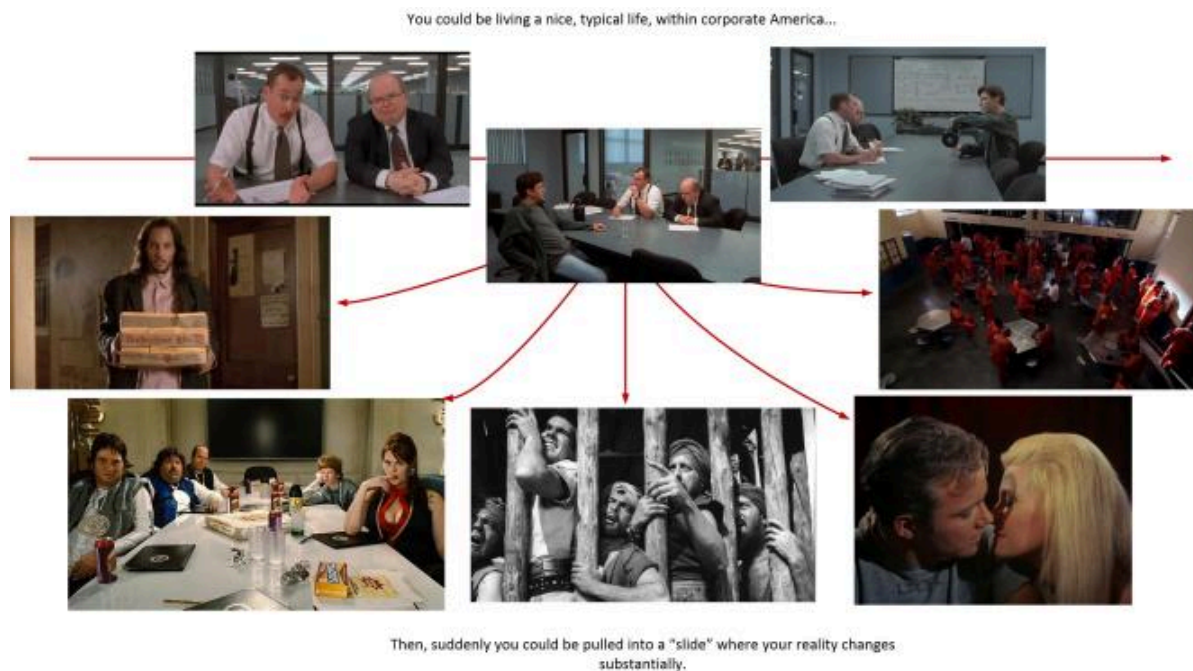

s what it was like.

ature of my role, I would not follow the surface as described within the topography. I would ed in slides and dives... including a few “deep dives”.

dives and slides would deviate way off from the mapped surface geometry. It would render standing of this visualization quite differently.

An illustration, by using map topography of the MWI to describe what a slide was like. It took me to a completely different series of world-lines that were way, way off the probability curves of a "normal" consciousness migration vector. In the instance shown, you can see that I was living a normal life on the MWI for a few seconds (figure four world-lines per second) and then boom! a slide would occur and I would be located way, way off my accustomed world-line.

A "slide" or a "dive" will transform your reality *substantially*. Often it will be wholly unrecognizable. Your body would be wholly immersed in the new reality, but your mind will not, nor will your memories.

ation #1 – Consciousness cycles in and out of world-lines in a idal manner.

ould be obvious to the astute reader, but it needs to be stated.

ciousness moves in and out of world-lines naturally. It moves in a sinusoidal manner. It and out. In and out. Over and over.

of travel varies from person to person, but typically averages around 4 Hz.

is time it changes "shape properties". Back and forth. Back and forth. Back and forth.

p" of the cycle it takes on wave behavior.

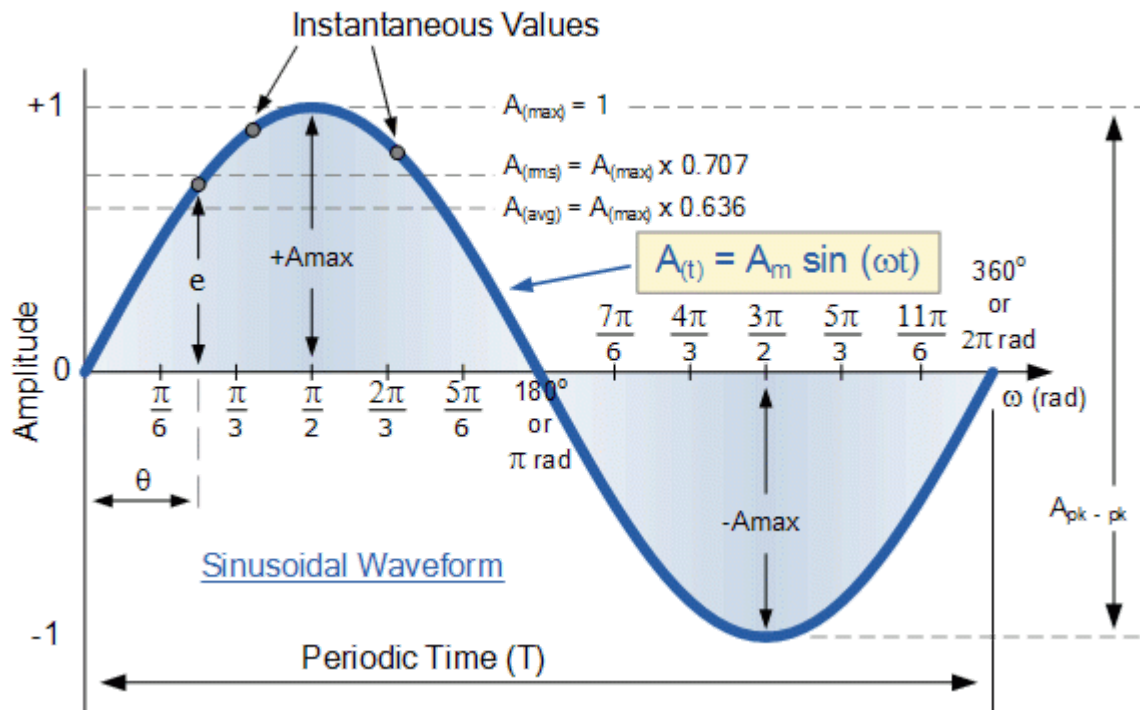

ottom" of the cycle, it takes on particle behavior.

akes on wave behavior it moves from one world-line to another directed by thought. It the spirit world".

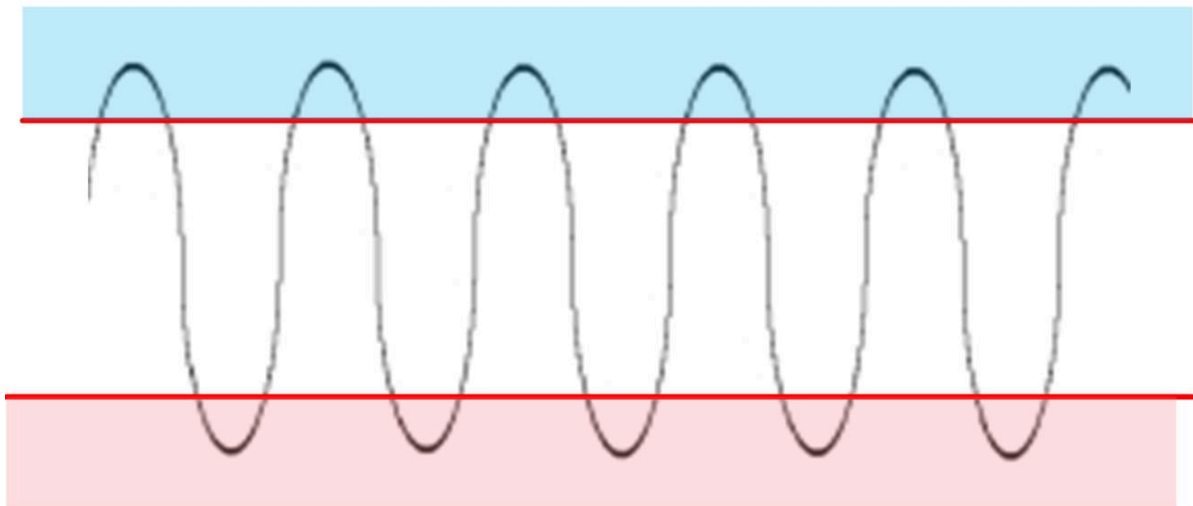

akes on particle behavior, it occupies a world-line and inhabits a physical body.

understood, we can define the amount of time that the transition from world-line to world-
i, as well as the duration a consciousness spends inside each world-line.

are 4 cycles per second, then, each trip back and forth from the "Heavenly realms"
d-line is 1/4 a second.

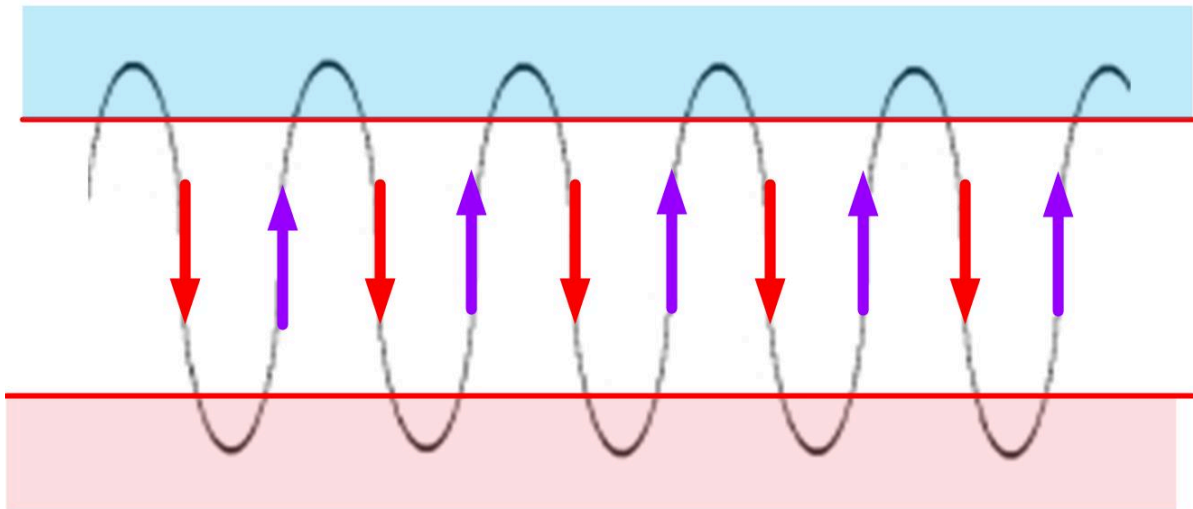

WAVE BEHAVIOR

PARTICLE BEHAVIOR

Consciousness movement in and out of different world-lines.

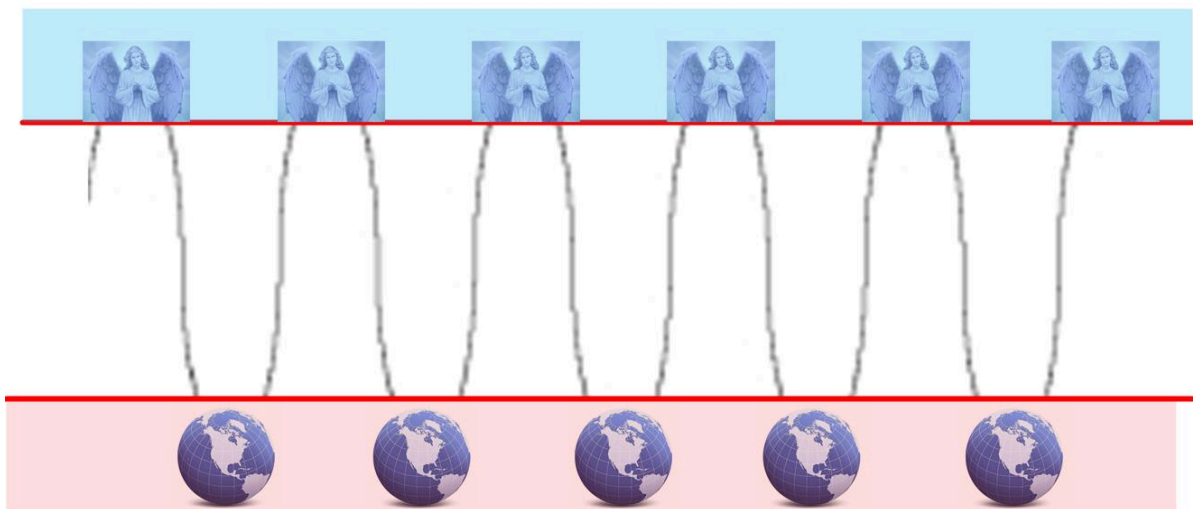

WAVE BEHAVIOR

PARTICLE BEHAVIOR

Movement of consciousness.

WAVE BEHAVIOR

PARTICLE BEHAVIOR

Our consciousness cycles in and out of different world-lines. Between each trip it exists within "heaven".

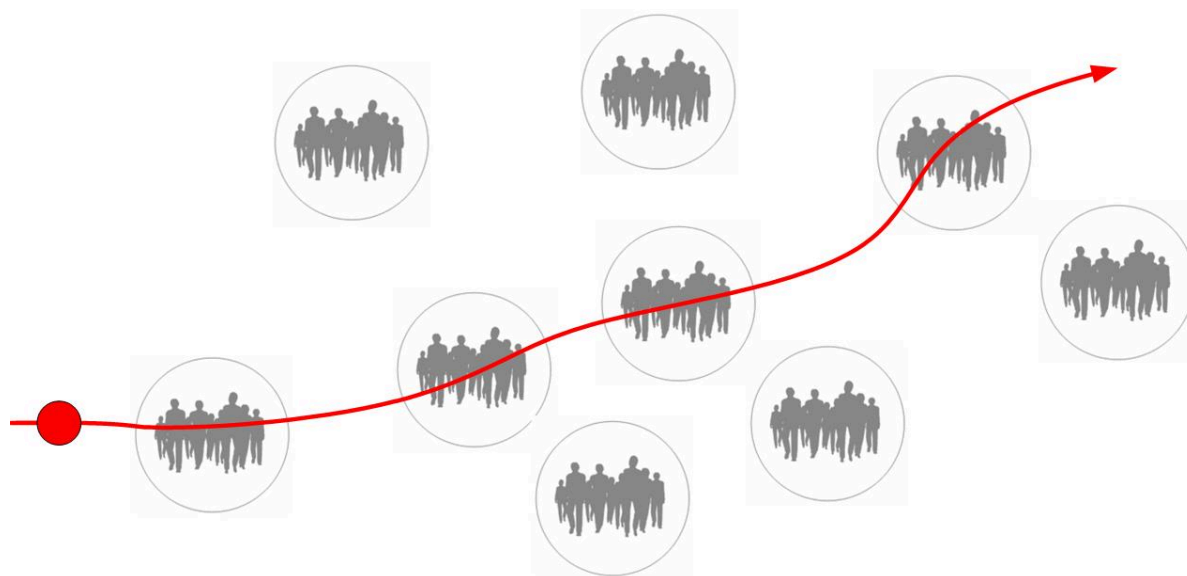

Correction #1 – Consciousness moves about the MWI when attached man body.

vious simplifications, I have referred to, and drawn the consciousness as a red blob; a ght. I have stated that "Soul" can generate multiple Consciousnesses that it places on ". These "Journeys for experience" is a life-experience for a soul.

p a
t

f
s, it

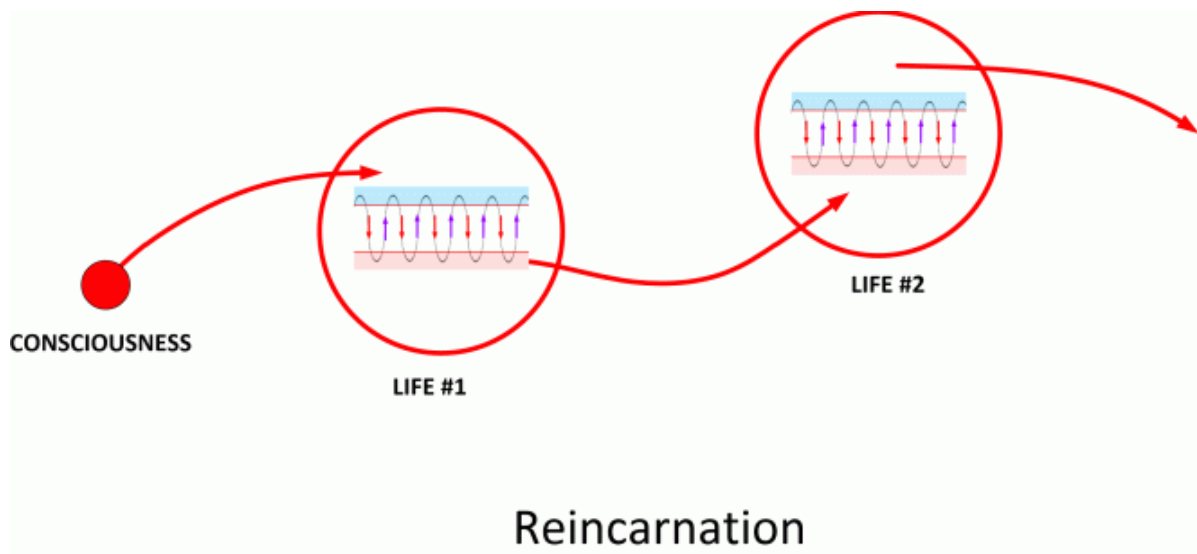

Simplified diagram of how consciousness moves in and out of the MWI and gives us the illusion of time. This is what one second of life looks like for the average person. He / she enters and leaves four different world lines each second. This “movement” appears as time.

sne
n

-form and “rests” within the “Heavenly realms”.

n is thus made by the soul, the consciousness, and their associations with other spirits, and heavenly denizens on what to do next.

nvolved being injected on another “journey” in another life. This is often referred to as
tion.

This graphic shows how the the “passage of time” is viewed in the big-scale of things. MWI movement occurs during a human “lifespan”. You can only experience world-line travel within a given life. (There’s exceptions to this, but let’s stay focused.)

Correction #2 – Consciousness is not a point-source.

Consciousness is actually quite complex and complicated.

It’s not a blob, a dot, a “something”.

A collection of “stuff” that operates in such a way that the soul, the consciousness, the MWI and the world-lines generate memories and navigate the life-path to create experiences that the soul can remember.

It uses a “consciousness” that it uses to travel the MWI.

It enters into a given world-line, and allows it to move unencumbered and subject to it’s own rules. Each world-line is a “physical reality” that the consciousness occupies.

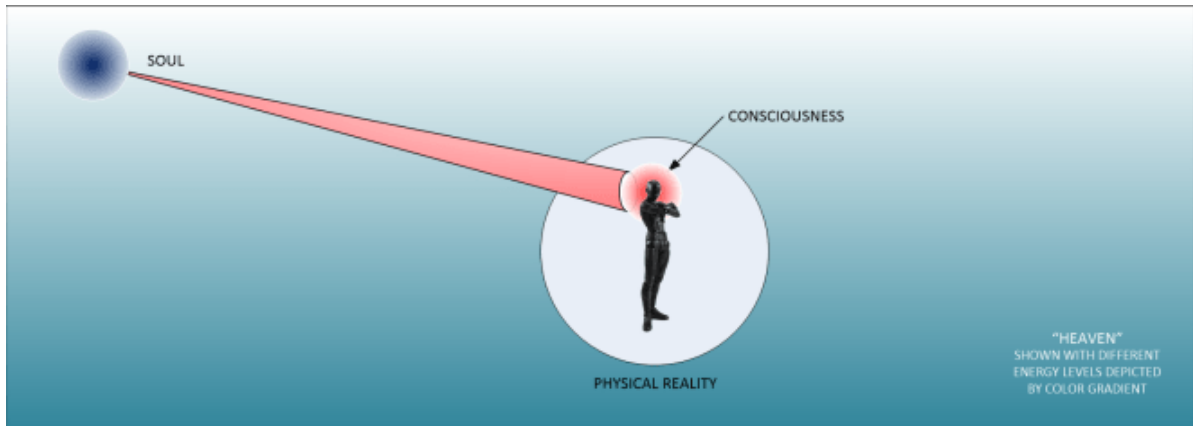

For all of this, I drew consciousness (literately, and artistically) as a point. I drew it as a red blob. Like in the two earlier drawings.

The drawing above showing the consciousness as a red blob in front of a long tunnel to the right.

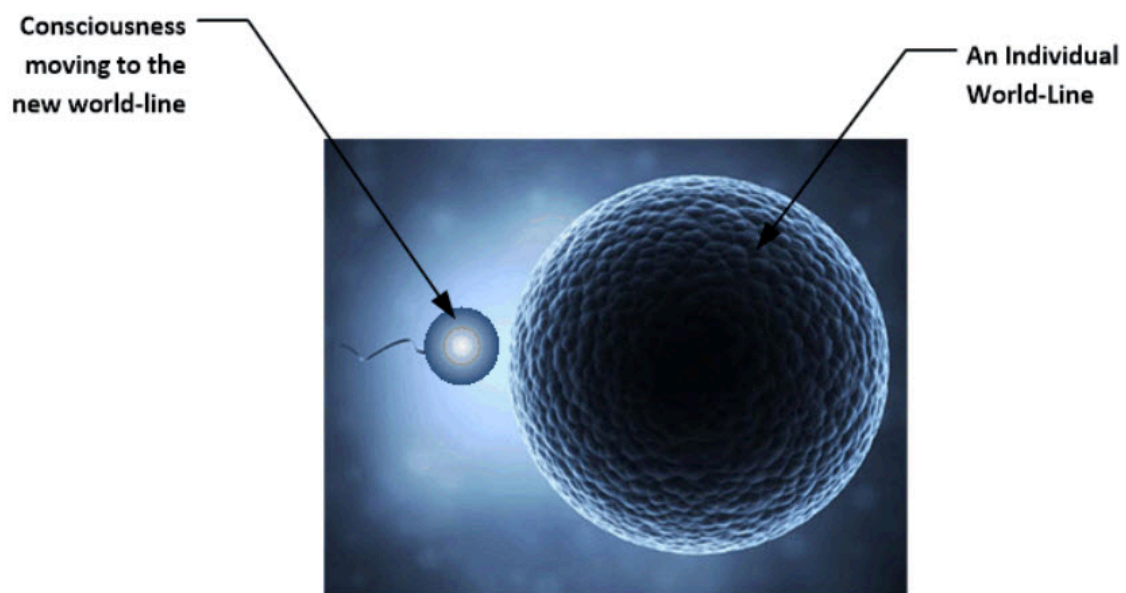

But the true reality is a bit different.

It’s not to have your mind blown.

Consciousness actually occupies multiple World-line-realities at any given moment simultaneously. It is actually not a “red blob”. It’s a lot of “red blobs”. Each one occupying a different world-line... simultaneously.

The soul, which resides in the “Heavenly realms” creates a consciousness from which to experience things and events. Thus learns and grows. Consciousness is the passageway or “tunnel” that connects the physical reality to the soul.

Movement of soul consciousness to a world-line reality.

Movement of consciousness into a world-line as depicted as a point source.

red
ing in and out.

Consciousness occupies numerous world-lines at any given moment. Each world-line is but similar. The Consciousness interprets the differences as a singular world-line.

Consciousness actually occupies multiple world-lines at any given moment.

Consciousness occupies multiple world-lines at any given moment. The sum total of what our consciousness experiences is what we view as “our” present world-line. It appears to be but one singular world-line, but it is actually a aggregate composite of all the world-lines that our consciousness occupies at any given moment. $1 / (30/4 + 40/4 + 20/4 + 10/4) = \text{Momentary reality.}$

Consciousness actually occupies multiple world-lines at any given moment.

Consciousness occupies multiple world-lines at any given moment. The sum total of what our consciousness experiences is what we view as “our” present world-line. They all change in the same cycle as governed by the consciousness.

Correction #2 – World-Lines are not point-sources either.

a tendency to think of a “world” as a fixed and solid place. And the way that I have found the movement of time, has been the consciousness moving in and out from these fixed realities.

“line” is the resultant combined perception of a moment “frozen in time” that combines multiple world-lines into a singular apparent place.

Don't think a world-line is is not a fixed singular place.

The sum total average of all the experiences that a consciousness is exposed to at any moment in time.

The exact opposite of “[living within an echo chamber](#)“. It enables the consciousness to experience different experiences instead of simply reinforcing existing ones that the consciousness is accustomed to over the years.

By fracturing a consciousness and occupying many similar world-lines simultaneously, the resultant consciousness would end up with a richer “experience”. It can also help to direct the travel and migrate to “better” world-lines per it’s directives.

Correction #3 – World-Lines are not entirely empty of other consciousnesses.

Understand how you can move in and out of multiple world-lines, it makes sense to think of simply. Your consciousness is a point or sphere. The world-lines are empty and only occupied by “other consciousnesses”. But that’s really a simplistic picture.

Simple narrative.

That you are only consciousness. And that you can move in and out of different world-lines they seem to be occupied by all kinds of other people, but that is just an illusion. Most world-lines are just empty. And all those other people are just “quantum shadows” of others.

This simplistic narrative needs to be revised to reflect the reality.

If 100% of a consciousness entering a world-line where all the “quantum shadows” only occupy occupancy within that reality...

Don't look at the reality...

A consciousness might devote (say) 23% occupation within a given world-line, and all those “quantum shadows” are actually occupied by other consciousnesses. Only they are a much smaller

ge. Often varying from 0.0002% to 0.1%.

ruth, all world-lines are not truly empty. They are occupied to some extent. And all of the consciousnesses react to the way your consciousness behaves within any given particular

!.

Quick Review

Before we need to go further, please note the summary of state regarding the universe. Originally found here...

The True Nature of the Universe

This is a discussion on the true nature of the universe and how individual realities fit within its' scope. I consider this an important writing and it acts as a "bridge" between the various "schools of thought" on the nature of our universe. What is presented is for your consideration.

- Depending on the scale of consideration, we have a *threshold* of consciousness.
- Consciousness can not exist below that *threshold*.
- Consciousness generates thoughts.
- Below the consciousness *threshold* is a universe that is independent of thought.
- Above the consciousness *threshold* we have a reality that is ruled by thought.

Finally,

- We exist within two (x2) universes simultaneously. One is the reality that our consciousness inhabits, and the other is the realm where our soul exists.
- One universe is ruled by thought and the other is not.

Additionally,

- The ψ is a measure of how thought alters our reality.
- Heaven is ψ -ontic.
- Our reality is ψ -epistemic.
- Tests seem to confirm this.

Putting Everything Together

The sum totality of everything is ψ -ontic. It contains a number of "Heaven(s)". Souls, which are self-aware clusters of quanta in the form of garbons, create ψ -epistemic "bubbles" of reality, and place consciousnesses there to obtain experiences.

- Experiences plus thoughts create sentience.
- Sentience is a building block that establishes garbon formation.
- Garbon formation, configuration and utilization is how souls grow, advance and move toward the divine.

As consciousness moves about within the ψ -epistemic “bubbles” of reality, thoughts are created and action occurs. The very nature of this CHANGES the “bubble” of reality. We view this change as gradual. We call this the “passage of time”.

However,

Our reality is often changed by huge events, actions and decisions from significant sources. Not just adjacent trivialities such as thought and intent. When this happens, the reality is jolted and more radical change occurs.

Take Aways

- **Every person lives within his or her own reality.**
- Realities are constructs of the soul.
- Realities are drawn from a Universal Template.
- **Consciousness is a bridge between the soul and experiences in the reality.**
- Souls consist of organized quantum strings that have obtained sentience.
- With the skill of intention, a person can tweak their reality.
- With the utilization of technology, one can alter their reality substantially.

And now with this basic introduction of some of the key elements of our understanding of the nature of how everything works, let’s see what the “Scientists” have to say...

Physicists have long suspected that quantum mechanics allows two observers to experience different, conflicting realities. Now they’ve performed the first experiment that proves it.

Back in 1961, the Nobel Prize–winning physicist Eugene Wigner outlined a thought experiment that demonstrated one of the lesser-known paradoxes of quantum mechanics. The experiment shows how the strange nature of the universe allows two observers—say, Wigner and Wigner’s friend—to experience different realities.

Since then, physicists have used the “Wigner’s Friend” thought experiment to explore the nature of measurement and to argue over whether objective facts can exist. That’s important because scientists carry out experiments to establish objective facts. But if they experience different realities, the argument goes, how can they agree on what these facts might be?

That's provided some entertaining fodder for after-dinner conversation, but Wigner's thought experiment has never been more than that—just a thought experiment.

Last year, however, physicists noticed that recent advances in quantum technologies have made it possible to reproduce the Wigner's Friend test in a real experiment. In other words, it ought to be possible to create different realities and compare them in the lab to find out whether they can be reconciled.

And today, Massimiliano Proietti at Heriot-Watt University in Edinburgh and a few colleagues say they have performed this experiment for the first time: they have created different realities and compared them. Their conclusion is that Wigner was correct—these realities can be made irreconcilable so that it is impossible to agree on objective facts about an experiment.

Wigner's original thought experiment is straightforward in principle. It begins with a single polarized photon that, when measured, can have either a horizontal polarization or a vertical polarization. But before the measurement, according to the laws of quantum mechanics, the photon exists in both polarization states at the same time—a so-called superposition.

Wigner imagined a friend in a different lab measuring the state of this photon and storing the result, while Wigner observed from afar. Wigner has no information about his friend's measurement and so is forced to assume that the photon and the measurement of it are in a superposition of all possible outcomes of the experiment.

Wigner can even perform an experiment to determine whether this superposition exists or not. This is a kind of interference experiment showing that the photon and the measurement are indeed in a superposition.

From Wigner's point of view, this is a "fact"—the superposition exists. And this fact suggests that a measurement cannot have taken place.

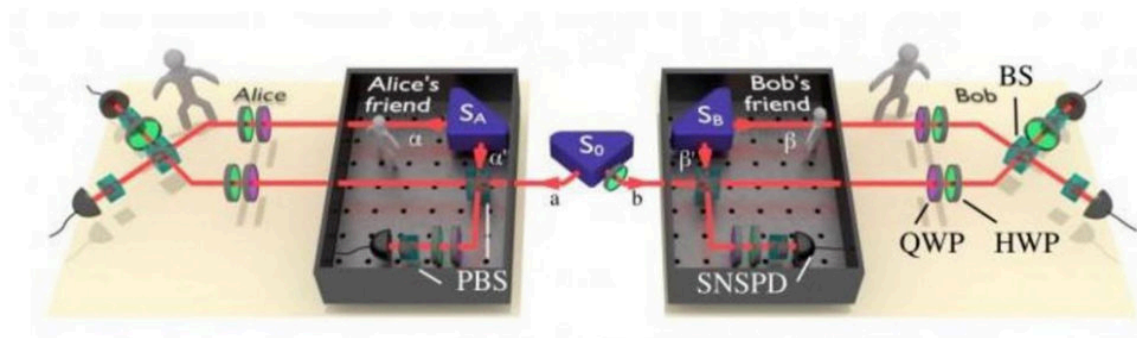

But this is in stark contrast to the point of view of the friend, who has indeed measured the photon's polarization and recorded it. The friend can even call Wigner and say the measurement has been done (provided the outcome is not revealed).

So the two realities are at odds with each other. "This calls into question the objective status of the facts established by the two observers," say Proietti and co.

That's the theory, but last year Caslav Brukner, at the University of Vienna in Austria, came up with a way to re-create the Wigner's Friend experiment in the lab by means of techniques involving the entanglement of many particles at the same time.

The breakthrough that Proietti and co have made is to carry this out. “In a state-of-the-art 6-photon experiment, we realize this extended Wigner’s friend scenario,” they say.

They use these six entangled photons to create two alternate realities—one representing Wigner and one representing Wigner’s friend. Wigner’s friend measures the polarization of a photon and stores the result. Wigner then performs an interference measurement to determine if the measurement and the photon are in a superposition.

The experiment produces an unambiguous result. It turns out that both realities can coexist even though they produce irreconcilable outcomes, just as Wigner predicted.

That raises some fascinating questions that are forcing physicists to reconsider the nature of reality.

The idea that observers can ultimately reconcile their measurements of some kind of fundamental reality is based on several assumptions. The first is that universal facts actually exist and that observers can agree on them.

But there are other assumptions too. One is that observers have the freedom to make whatever observations they want. And another is that the choices one observer makes do not influence the choices other observers make—an assumption that physicists call locality.

If there is an objective reality that everyone can agree on, then these assumptions all hold.

But Proietti and co's result suggests that objective reality does not exist. In other words, the experiment suggests that one or more of the assumptions—the idea that there is a reality we can agree on, the idea that we have freedom of choice, or the idea of locality—must be wrong.

Of course, there is another way out for those hanging on to the conventional view of reality. This is that there is some other loophole that the experimenters have overlooked. Indeed, physicists have tried to close loopholes in similar experiments for years, although they concede that it may never be possible to close them all.

Nevertheless, the work has important implications for the work of scientists. “The scientific method relies on facts, established through repeated measurements and agreed upon universally, independently of who observed them,” say Proietti and co. And yet in the same paper, they undermine this idea, perhaps fatally.

The next step is to go further: to construct experiments creating increasingly bizarre alternate realities that cannot be reconciled. Where this will take us is anybody’s guess. But Wigner, and his friend, would surely not be surprised.
