

CONSOLIDATED TABLE OF FALSIFIABLE PREDICTIONS

Prediction	Section	Measurement	Falsification Criterion
Intentional thought produces measurable frequency shifts ($\Delta\Omega$).	VI.4.1, III.3	EEG/MEG phase coherence during intentional navigation tasks.	No measurable shift occurs during intentional thought.
Phase-locking correlates with navigation success.	VI.4.2	EEG PLV and self-reported/behavioral outcome measures.	No correlation between phase-locking and outcome achievement.
Memory is non-local; memories persist beyond neural storage capacity.	VI.4.3, III.3	Memory retrieval under anesthesia, brain damage, or cardiac arrest.	No instance of memory exceeding neural storage capacity.
Shared experiences correlate with frequency similarity.	VI.4.4, III.4	Hyperscanning EEG during shared experiences.	No correlation between frequency similarity and shared experiences.
Intentional frequency shifts alter perceptual content.	VI.4.5	Neurofeedback training and perceptual content tests.	No change in perceptual content during intentional modulation.
Individuals sharing a Mandela Effect show higher EEG coherence.	III.4.5	EEG coherence comparison between believers and non-believers.	No difference in coherence between groups.

ESP correlates with duty cycle alteration (more time in non-physical state).	X.7	EEG/MEG during ESP tasks.	No measurable shift in duty cycle during ESP events.
Feeling-based navigation produces more accurate outcomes than symbolic navigation.	XII.9	Controlled manifestation experiments.	No difference in outcome accuracy between methods.
Environmental shadow inertia correlates with escape difficulty.	XII.10	Longitudinal studies of environmental change and subjective well-being.	No correlation between shadow inertia and escape difficulty.
Agency practice correlates with divergence from pre-birth template.	XII.11	Longitudinal studies of intentional frequency modulation and life trajectory.	No correlation between agency practice and life trajectory divergence.
Soul complexity (garbon count/coherence) correlates with navigational success.	XIV.5	Theoretical modeling; biophysical correlates.	No correlation between complexity and success.
Travelers leave anomalous traces (physical, cultural, technological).	XVI.6	Historical anomaly analysis; electromagnetic/gravity wave monitoring.	No anomalous traces found.
Group vector shifts correlate with inter-brain coherence changes	XX.8	Hyperscanning EEG during group shifts.	No correlation between group shifts and inter-brain coherence

changes.			conference.
Basin overlap correlates with frequency similarity between species.	XXI.8	Hyperscanning EEG between humans and animals.	No correlation between overlap and frequency similarity.
Intentional frequency modulation produces measurable EEG/MEG changes.	XXII.7	EEG/MEG during intentional frequency modulation practice.	No measurable changes occur.

Summary of Predictions by Category

Category	Predictions
Frequency Measurement	Predictions 1, 5, 15
Memory and Identity	Prediction 3
Shared Reality and Anomalies	Predictions 4, 6, 7, 13, 14
Navigation and Manifestation	Predictions 2, 8, 10
Environmental and Structural	Predictions 9, 11, 12

This concludes the Consolidated Table of Falsifiable Predictions.
