

The True Nature of the Universe – Metallicman

 metallicman.com/laoban4site/the-true-nature-of-the-universe

congjing yu

August 28, 2018

Elsewhere discussed the physical universe, and we discussed the various dimensions of the universe. We discussed how souls are constructed and the quanta that comprise them. For all of these discussions, we really need to discuss what reality is...

Or more interesting, a more central question. Just how does the reality that we see and interact with reflect our mind and thoughts? To answer this question we have to enter a realm of understanding that involves some new terms and some new ways of thinking.

Warning, it tends to get a little bit confusing here. So please hang on.

What is reality? What is real? Is everything that what we sense is the ONLY reality that we have? Or does it include other things, that are beyond our senses? I argue that our universe consists of two states. The state that we are involved in is the true reality that we inhabit.

This post is an introduction to what the true nature of reality is. I discuss it in the most elementary forms and offer pathways for the common reader to consider and ponder. Like the rest of my writings, it is only a signpost to lead to better and more detailed considerations.

Remember, I am only transcribing what I know from my MAJestic involvement. If you want mathematical proofs, you will need to hike over to those who make a living doing that kind of thing.

Introduction

One of the biggest things that I must impart to the reader is that the Quantum world and the “real” world are the same thing. They are not separate realities.

Physics tells us the universe is as it is, and thus able to support life and consciousness. This is because 20 or more physical constants and the laws they dictate take on very *specific* values.

If any of these varied even slightly, we would not be here.

Therefore, the precise values and our presence in the universe are apparently a coincidence. It's more than that. It is a stunningly amazing coincidence. It is “mind boggling”.

To figure out this unbelievable coincidence, scientists have come up with explanations. (I guess that they don't want to even look at “intelligent design” as one of them. Well, they will eventually. It might take a few centuries, but they will.)

They have come up with an explanation known as the “**anthropic principle**”. This explanation addresses the question of why these values are what they are, and has several interpretations.

The most common is tautological. Which means that we are in this particular universe simply “because”. The universe has these specific values simply because it has those values. If it did not, we would not be here.

Eh?

For many physicists and philosophers, the tautological answer is related to the multiple worldviews, or the MWI. In short, this universe with consciousness is one that resides within a multitude of universes.

All the others have different physical constants and lack life and consciousness.

There should be no question or concern that quantum mechanics is our most successful theory of nature. It is not Newtonian mechanics. However, many people just don't understand it very well. They think that its rules and behaviors are too strange for practical day to day application. Make no mistake, there is absolutely no question that Quantum theory, as well as its key mathematical tool, the wave function, excels at predicting probabilities for the outcomes of experiments.

Yet there is a problem. No one can figure out how it all fits together. The physicists and those “philosophers of science” cannot agree as to how the quantum mechanics influences our “real” world.

Because of this, there has mushroomed a small “cottage industry” of interpretations of quantum theory, and what precisely what it is. Could I be one of the workers in this little

industry? What do you think?

Nah.

This is my feeble attempt to describe our true absolute reality. It is my attempt to show how the physical world that we observe is but a myopic view of the true reality. It is my attempt to show that our universe is fashioned as such by the limitations of our physical body.

We define what our Universe Is

Forget about thought for now. Let's just consider the "physical" world that surrounds us...

So, what is the fine structure of the universe?

- The material world is composed of atoms and subatomic particles.
- But atoms ($\sim 10^{-8}$ cm) are mostly empty space.
- Well, not exactly "empty" (When I first penned this, that was what I thought. However, my opinion has since changed drastically. There is nothing as "empty space", it is all filled with "something". Space and time are mental illusions that we have created to help us understand things.), as is the space between atoms.
- If we go down in scale from atoms, eventually we reach the basement level of reality, Planck scale geometry at 10^{-33} cm, with coarseness, irregularity, and information.

OK. So here we are. We are at the bottom of the very basic physical reality. We call it "Planck-scale geometry".

Descriptions of Planck scale geometry include such things as;

1. String theory.
2. Loop quantum gravity.

We don't really know what the best theory is for things so absolutely tiny. We can only suppose theories.

String theory, is a pretty valid theory. I guess. Here, Planck scale strings vibrate at specific frequencies. Each frequency correlates with fundamental particles. It's a pretty decent theory as far as theories go. But it does have some problems. It lacks background geometry (Where and in what environment do the strings vibrate?) and it also requires multiple untestable dimensions. Ouch!

Or, perhaps...

Loop quantum gravity depicts space-time geometry as quantized into "volume pixels". These volume pixels are Planck scale polygons with edges that have special properties. The edges may be considered as irreducible spin whose lengths vary (but tend to average

10⁻³³ cm). Planck volumes evolve and change with time, conveying information as a 3-dimensional spider web of spin. Experiments suggest that space-time geometry is also non-local, and maybe holographic.

By studying what is going on at the tiniest levels of our observed reality, we can get some understanding of our universe. As long as we can settle upon a theory that works well enough.

Recent evidence suggests that Planck scale information may repeat at increasing scales in space-time geometry, reaching to the scale of biological systems. Or, in other words, “*as above, so below*”. It’s sort of like a Mandelbrot illustration.

Things behave in similar ways to scale. Thus, you can observe trends and behaviors that seem to have patterns.

We tend to believe in this behavior of scale due to observations in test environments. For instance, the British-German GEO 600 gravity wave detector near Hanover, Germany has consistently recorded fractal-like noise which apparently emanates from Planck scale fluctuations. These fluctuations repeat every few orders of magnitude in size and frequency. They go from Planck length and time (10⁻³³ cm; 10⁻⁴³ s) to bio-molecular size and time (10⁻⁸ cm; 10⁻² s).

At some point (or actually at some complex edge, or surface) in this hierarchy of scale, the microscopic quantum world transitions to the classical Newtonian world. It *transitions* cleanly and absolutely.

If this transition is due to some kind of Penrose-related theory, and there is no reason to consider that it might not, then it is reasonable to consider that *consciousness* occurs as a *process* on this edge between quantum and classical worlds.

The Penrose-Hameroff theory of "orchestrated objective reduction" ("Orch OR") proposes that consciousness depends on quantum computations in structures called microtubules inside brain neurons, occurring concomitantly with and supporting neuronal-level synaptic computation (Penrose and Hameroff 1995; Hameroff and Penrose 1996a,b; Hameroff 1998a,b; Hameroff et al. 2002). After all, everything that is being discussed is related to perceptions...

Consciousness occurs at the transition point between quantum and classical Newtonian science.

Which points out some very **significant** considerations;

- Depending on the scale of consideration, we have a threshold of consciousness.
- Consciousness cannot exist below that threshold.
- Consciousness generates thoughts.
- Below the consciousness threshold is a universe that is independent of thought.
- Above the consciousness threshold we have a reality that is ruled by thought.

Finally,

- We exist within two universes simultaneously.
- One universe is ruled by thought and the other is not.

"Land us over there, will you. Captain; that looks like rich country if I ever saw it."

It was the freshest green color they had seen since childhood.

Lakes lay like clear blue water droplets through the soft hills; there were no loud highways, signboards or cities. It's a sea of green golf links, thought Forester, which goes on forever. Putting greens, driving greens, you could walk ten thousand miles in any direction and never finish your game. A Sunday planet a croquet-lawn world, where, you could lie on your back, clover in your lips, eyes half shut, smiling at the sky, smelling the grass, drowse through an eternal Sabbath, rousing only on occasion to turn the Sunday paper or crack the red-striped wooden ball through the wicket.

"It ever a planet was a woman, this one is..."

-Ray Bradbury. [Here There Be Tygers](#)

The Terrible Mess

"Anyone who considers protocol unimportant has never dealt with a cat."

-Robert Heinlein in *"The Cat Who Walks Through Walls."*

To begin, we all must recognize that everything in the observed universe is made up of either [1] physical matter, [2] energy, or [3] "dark" matter. All of these three forms can be

broken down into the smallest elements known to man. (No, not atoms. Smaller. Think vibrating “strings” or as we just discussed, Loop quantum gravity.)

At these small sizes they exhibit quantum behavior. (That is to say that they can behave like a particle or like a wave depending on the observer. They are so, so, so very tiny, that thought influences their very form.)

Ponder that one for a second...

The small size of quanta is influenced by thought. If so, how? Could it be that thought, is in itself a "thing"; a thing that is larger than these small tiny-sized quanta.

It is not that a quanta changes, it is how the observer views the quanta that makes the change. Our soul controls consciousness. Consciousness can be in different states depending upon the point of view of the person (the observer).

Thus, to understand the nature of our universe, we must look at these tiny elements; these tiny waves and see how they behave.

As much as we think we know, we are constantly being reminded that what we do know is very small. We don't yet know about the nature of the universe, and how everything fits together. We are constantly reminded of that point and that fact. For instance, consider the details of the [study](#) published in the journal Nature .

In short, the three experiments reviewed in the studies involved [1] charged leptons, (which are electrons), [2] muons, and the [3] heavier taus.

Leptons			
mass →	$<2.2 \text{ eV}/c^2$	$<0.17 \text{ MeV}/c^2$	$<15.5 \text{ MeV}/c^2$
charge →	0	0	0
spin →	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
name →	ν_e electron neutrino	ν_μ muon neutrino	ν_τ tau neutrino
	$0.511 \text{ MeV}/c^2$	$105.7 \text{ MeV}/c^2$	$1.777 \text{ GeV}/c^2$
	-1	-1	-1
	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
	e electron	μ muon	τ tau
	I	II	III

Here are the relationships of the various quantum particles for our discussion herein.

The experiments revealed that taus actually decay *faster* than the standard model predicts.

The surprising thing was the data which came from the LHCb experiment at CERN in Switzerland, the BaBar detector of the SLAC National Accelerator Laboratory in California, and the Belle experiment in Japan challenged lepton universality at four standard deviations. This means that there's a 99.95 percent certainty that this data is accurate, according to the USCB team.

Initial reading into these results would seem to indicate that there is indeed a deviation from the Standard Model of particle physics.

This could mean that an entirely different model of physics is needed to explain the peculiar behavior of the tau particle. In other words, *new physics* is required.

I urge the reader never to consider that we know “all that there is to know”, simply because of the latest trends in technology. Until we, as a species are able to troll about the multi-worlds in our own world-lines we will be imprisoned within our own bubbles of ignorance.

The Wave Function

The observer determines the forms that we sense. Thoughts control all. The shape of the quanta is determined by the observer, and that determines our reality.

At the center of this “wavy” quagmire is the “wave function.”

A measure of our ability to determine how and why these tiny strings change shape with thought is through the “wave function”.

Using the wave function, better known by its mathematical nickname, ψ (“psi”), physicists can calculate the probability that a quantum measurement will have a particular outcome. (It is all probability. The highest probabilities determine the given dimension that we reside in at any given moment.) That therein lies the strength of quantum physics, as well as the apparent strangeness of it.

This ψ is a measure of how thought alters our reality.

┆ This ψ is a measure of how thought alters our reality.

The success of this procedure has allowed us to control the subatomic world with unprecedented precision. From it we have developed the entire microelectronics revolution. All electronics from iPhones to televisions rely upon the principles of quantum mechanics. Yet, this success is not really well understood.

Humans want discrete and solid answers. They want a classical physics answer. But quantum mechanics can’t deliver a single, definite answer to a simple question about the outcome of a measurements. Instead, it returns a “probability distribution curve” representing many different possible outcomes.

It's only after you make a measurement that you *observe* a stable, predictable, classical outcome. At this point, the wave function is said to have "*collapsed*."

To some, this suggests that there is a **gap** between the real, physical universe and whatever it is that the wave function is describing. If so, then what does the wave function actually represent? And what, if anything, is actually collapsing? It appears confusing, if not absolutely crazy. (But that is simply a matter of perception that is colored by the limitations of our human senses. We cannot "see" the multidimensional aspects of reality, so quantum laws appear to be nonsensical.)

I would like to provide some insight to this devilishly complex condition. As it is critically important to understanding everything that I have written in this blog.

The missing piece – thought

What is the missing piece? Why is there a gap between how the quantum universe works and the physical world works? The answer it seems is quite simple, but we refuse to believe it.

What it is; it is thought.

Humans are confused because we insist that thought has no tangible form. It is just effervescent "nothing". That is wrong. Thought is a quantum reality; it is missing factor in the behavior of physical items in the physical universe. The ability for our soul and it's physical body to construct thoughts is the key to manipulation of the quantum world and thus the physical reality that surrounds us.

Perhaps it is our *way of looking* at this problem that causes such problematic confusion.

How we perceive reality handicaps us. We never get to see all that there is. We never get to see the ultimate truth. We are in this reality with hampered and retarded senses. We must strive to look beyond what we can perceive.

An ψ – Ontic Existence

Philosophers use the word “ontic” to describe real objects and events in the universe, things that exist regardless of whether anyone observes them. If you don’t see them, if you don’t think about them, they still exist. They would exist whether you were alive or not.

If you think of the universe as a video game, the so-called “ ψ -ontic” view holds that the wave function is the source code.

From this perspective, the wave function does indeed correspond directly to physical reality, containing a complete description of what philosophers call “*the furniture of the world.*”

For these “ ψ -ontologists” (as their opponents playfully call them), quantum theory, and reality itself, is ultimately about how the wave function unfolds over time, according to the Schrödinger Equation.

In the quantum realist view, ψ is, in some sense, “all there is.”

To many thinkers in this camp, nothing extraordinary happens at the moment the wave function collapses. The apparently instantaneous collapse is actually just a very rapid process that occurs as a formerly-isolated quantum system interacts with its surrounding environment.

But...

But, please consider however, the strange idea that the collapse is something else entirely. Instead of a wave function collapse within your dimension, it is something else.

Consider the idea and concept that a collapse occurs when you change from one dimension to another dimension.

Perhaps it is actually a transference of dimensional states that your soul resides in. Not a fixed dimensional state where you observe a collapse occurring.

Oh wow!

An ψ – Epistemic Existence

By contrast, the alternative “ ψ -epistemic” view holds that the wave function represents something quite different. At most it provides us with a limited knowledge of the state of the system. It does not provide the source code.

However, if you study this function in detail, you might be able to *learn* about the source code.

Some ψ -epistemologists believe an actual ontic state still exists. This is true even if the wave function is just a “*convenient computational tool*” that doesn’t capture all of the underlying reality.

Others in the ψ -epistemic camp contend that the physical ontic state may not even exist without an observer present. They argue that the game doesn’t exist if there’s no one there to play it.

What our physical reality is...

Of these two belief structures, the one that I am most familiar with is the more “realist” position. This position holds that there is a real, physical, world that exists independent of the observer. This is true, regardless of whether or not the wave function captures the whole story.

I do not know if it is the actual and true nature of reality; I only know that this the one position that seems to agree with what I have observed and experienced first-hand.

It is also the one that I am most comfortable with, and the one that seems to be in the best agreement with (what I know) known MAJestic understandings. (This is not because of what the reader might think. No. Instead it is because our thoughts are constantly shifting in and out of the multi-dimensional universe.)

This is the true crux of the issue and the matter at hand. How the universe is depends on the quantum state of your consciousness. If your consciousness is of particle duality, then you exist within a bubble of reality. You cannot see outside of that. However, if your consciousness is of wave duality, then you can see the entire reality of the universe.

I ask the reader to recall, that I earlier described that our universe consists of two different universe states. One is controlled by consciousness and the thoughts by consciousness. The other is not.

For the record; it is the ψ -epistemic view that best describes the physical reality that we observe within our customized reality.

| The ψ -epistemic view describes our observed reality.

It is the ψ -ontic view that holds the absolute framework by which all of the multi-verse universes exist within. We are trapped within a ψ -epistemic custom reality where it appears that everything is fixed. But that is illusionary. It is fixed because the world-line for each soul is custom to meet the learning and educational demands of the soul.

| The ψ -ontic view describes our true universe.

Ah the Schrödinger's cat issue. What is going on? Is it in the box or not? It only "hardens" into a set reality when we, the observer, sees it.

How it works

The soul controls all. The soul controls everything. It creates time. It creates space. It forges a world-line for each soul to conduct specific learning exercises. As such, it makes absolute sense that it be ψ -ontic in nature.

However the reality of all; that of Heaven and the location where souls dwell is ψ -ontic. The reality that is created for us by our soul is ψ -epistemic.

In this view, wave function collapse is not an actual physical process.

Instead, it represents the near-instantaneous "updating of our knowledge" about the state of the system. This seems to give the observer some kind of special status, one in which the thoughts of the observer controls everything. This may or may not be desirable, depending on your perspective.

Schrödinger's cat

In this view, uncomfortable quantum super-positions, are just mathematical tools. They are mirages. They are the sums of potential possibilities, not actualities. Nothing matters what might be. All that matters is what actually is. It is all determined by observation. Nothing else matters.

Putting it together.

According to what I understand; theoretical work by the [British physicists Matthew Pusey, Jonathan Barrett, and Terry Rudolph \(PBR\)](#) has presented the strongest theoretical

evidence (I know of) in favor of the ψ -epistemic view for the universe as created individually for a specific soul.

They have proven a contradictory view by the ψ -ontic belief camp. Indeed the ψ -ontic view contradicts the predictions of quantum mechanics.

This seems to suggest that the wave function really does correspond to an objective physical reality. As such, the ψ -ontic team is out of luck in terms of the specific physical universe. However, the reader need be reminded that Heaven and souls occupy a dimensional reality that is beyond that of the ψ -epistemic structure *out of necessity*. Heaven is ψ -ontic. (This would make a great tee-shirt don't you think? "Heaven is ψ -ontic.")

| Heaven is ψ -ontic.

Test Confirmations in the Laboratory

In 2014, a team of experimental physicists conducted a very, very special experiment. Their leader, Martin Ringbauer, working with Professor Andrew White at the University of Queensland, performed a very special experiment to test the reality of this issue of ours.

This experiment was designed to test whether the ψ -ontic or ψ -epistemic picture gives is the best explanation for our observed reality. They argued that certain quantum experiments, could help determine this. Obviously the purpose was to identify whether the true nature of reality was either ψ -ontic or ψ -epistemic.

The key issue is that certain quantum states called "orthogonal" are relatively easy to distinguish experimentally.

It's a classic procedure. Set up a simple test and measure it exactly. Consider, for example a photon with "horizontal" polarization versus another with "vertical" polarization. Other "non-orthogonal" quantum states, like two different combinations of both horizontal and vertical polarization, cannot be distinguished perfectly, even if the experimenter knows what the possibilities are in advance.

The ψ -ontic and ψ -epistemic views tell very different stories about why non-orthogonal quantum states are so hard to tell apart in the lab.

- In the ψ -ontic view, the quantum state is uniquely determined by the ontic state.
- In the ψ -epistemic view, more than one quantum wave function can represent the same ontic reality.

This sounds complicated, but it needn't be.

We can show this visually using a graph like the one below. Assuming that there really is some underlying "reality", the ψ -ontic model says that the wave functions of two

independent states can't overlap. But in the ψ -epistemic model, on the right, two different wave functions can correspond to the same ontic state, represented by the purple area where the curves of the wave functions do overlap.

Ontic models vs. Epistemic models. Now, imagine that, instead of overlapping two-dimensional curves, we had overlapping three-dimensional spheres, or even more. ..

Ringbauer and his colleagues tested this out by measuring several states of specially-prepared photons, each with either three or four parameters. Adding a new quantum state is like adding an extra sphere to the set. When adding more spheres, and/or increasing the number of dimensions, it becomes even harder to find places where all the spheres overlap.

With this analogy in mind, the Queensland group found that as they increased the number of parameters (for each quantum state) and increased the number of states (they were trying to distinguish between), their experimental results increasingly diverged. The more they added complications, the more they diverged from the predictions of a well defined ψ -epistemic model.

Their experimental results thus strongly conflict with the ψ -epistemic picture's "overlap" model. This is considered a serious blow against the ψ -epistemic viewpoint.

My Understanding of Reality

In the quest to understand the true Nature of Reality, we must continually question our most basic assumptions. We need to admit and quantify our ignorance. I also need to be explicit about what we are assuming.

Do not shoot the messenger. I do not have the answers. My role was not to understand anything. And, my dear reader, I could very well be completely wrong about everything.

- Have you ever attended a wedding where, though you weren't the one exchanging vows with your beloved, you still felt your own commitment to your wife renewed? Have you ever been reading a book, and come upon an insight that was so profound your jaw literally dropped, and you spent the next couple minutes staring off in the distance, absorbing its significance?

- Have you ever been at a church service where the pastor was speaking to the congregation's unconverted, and while you already believed, you felt your heart greatly stirred?
- Have you ever watched a play, and left the theater with a head full of questions not only about the plot, but about its intersection with your own life?
- Have you ever had a friend share an experience that, though they didn't know it at the time, helped you figure out what decision to make with an issue you were personally struggling with?

In all of these situations, you were privy to a message or an experience that wasn't explicitly directed to you. You overheard it. Well, welcome to my life. I don't have all the answers, I only know what I participated in, and I have tried to translate into a language that is at best, inadequate to do so.

Conclusions

The universe consists of two universes. One that that are consciously aware of, and one that we are not.

The part that we are not aware of is often considered to be "Heaven", when it is in reality as place or gateway to multiple "Heavenly realms". The part that we are aware of is the reality that our consciousness inhabits.

The soul creates a consciousness that connects to a specific reality. That consciousness generates thoughts and alters that reality to fit the needs of the soul.

Take Aways

- Depending on the scale of consideration, we have a *threshold* of consciousness.
- Consciousness can not exist below that *threshold*.
- Consciousness generates thoughts.
- Below the consciousness *threshold* is a universe that is independent of thought.
- Above the consciousness *threshold* we have a reality that is ruled by thought.

Finally,

- We exist within two (x2) universes simultaneously.
- One universe is ruled by thought and the other is not.

Additionally,

- The ψ is a measure of how thought alters our reality.
- Heaven is ψ -ontic.
- Our reality is ψ -epistemic.

- Tests seem to confirm this.

FAQ

Q: Does the quantum wave function represent reality?

A: No. It only serves as a mathematical method from which we can calculate the given probability of an outcome. The interpretation of what is observed by the wave function determines the relative state of ψ .

Q: Is it possible to have a MWI where everything fits within a ψ -epistemic reality?

A: No. Any given reality is naturally ψ -epistemic, but all the alternative realities of the MWI are all encoded within a ψ -ontic state.

Q: How does consciousness control the MWI?

A: Consciousness creates a collapse of the wave function at the point in time whereas the (a) ψ -epistemic state is realized. This can occur with technology, or through mental discipline, or by “piggy-backing” on to other consciousnesses that have the ability to collapse a wave form at will.

MAJestic Related Posts – Training

These are posts and articles that revolve around how I was recruited for MAJestic and my training. Also discussed is the nature of secret programs. I really do not know why the organization was kept so secret. It really wasn't because of any kind of military concern, and the technologies were way too involved for any kind of information transfer. The only conclusion that I can come to is that we were obligated to maintain secrecy at the behalf of our extraterrestrial benefactors.

How to tell if someone is in MAJestic (Part One)

There are many fakers out there. I really do not know what their motivations are. Some might actually have some experience, I don't know. None of them seems to have any kind of background that even approaches the membership I know of. This is how you can sort out the truth from lies.

How to tell if someone is in MAJestic (Part Two)

In this second part, we go into details on how the United States safeguards secrets. We talk about the MJ-12 disclosure and a historical overview of MAJestic. We also discuss the various reasons and restrictions that MAJestic is operating from. It's an important read.

Top Secrets and Flying Pigs

Here I try to explain how the Special Access Program works, and described how the most secret elements of those programs are kept waived and unacknowledged. I discuss why, and use the example of a fictional “Flying Pigs Program”. To understand MAJestic, you need to read this.

The “Sales Pitch” Used to Ask Naval Aviators to Give Up Everything for MAJestic

This is a narrative on how I was offered the role within MAJestic. I was in training to be a Naval Aviator when I was called upon by the base commander. He asked me, and another AOCS, to join. This is how he convinced me.

Feducial Training of ELF-Based MWI Access

This is a small post about the training that we needed to learn into to enter into a transport mechanism for MWI access. You cannot access and switch world-lines without being able to access and “center” the implanted probes. This discusses this procedure and training.

MAJestic Mandated ELF-probe Implantation

This post goes into detail on how the first two “kits” of probes were implanted into my head. All of this procedure took place on the Naval base at the ELF substation. At the time, only myself and the other member of my “cell” aside from the Commander took part in this procedure.

My Very First MWI Portal Egress

This is a narrative of my very first experience in world-line travel. It happened immediately after I gave up flying as a Naval Aviator and joined the MAJestic organization. After training on feducials, and implantation, I joined a group of others and left our world-line.

First Egress Destination - EBP Implantation & Entanglement

This is the narrative of what transpired when I entered the Fixed Dimensional portal. I went to an extraterrestrial medical facility where a EBP was installed within my body. I discuss what happened and my first encounter.

Post EBP Reconstruction -Return To The Navy Barracks

This is my narrative on how I exited the dimensional portal and returned back to the Naval base. I discuss what it was like meeting my fellow classmates and how I was instructed to leave the Navy and become a civilian. This is how it is done and what I experienced.

After Implantation – Lost as an Autonomous Vagabond

This is my story of what happened after I joined MAJestic, and left the US Navy. I was fully actuated, but not yet trained in using my abilities. As such, I was a “loose cannon”, and existed in a very confusing state of reality. I was the real life Jason Bourne.

Rescue from the Wilderness – A Special Assignment

This particular post discusses how I found my way back to the Navy again, and began my “training”. I went into the desert to a Naval base located in the middle of the remote desert. At that time, I had no memory that I was part of a secretive military program, and thus the “special assignment” held little tangible meaning for me.

Probe Calibration and World-line Training (Part One)

Here is the story how the set of MAJestic probes, placed inside my skull, were calibrated. This took place after implantation, and involved calibration exercises at the Naval facility at China Lake in California. This is a two part post and discusses the facility and actions there.

Probe Calibration and World-line Training (Part Two)

This is the second portion of the two part post In this section we talk about how I was instructed in the operation of calibration of the probes and how I was provided with some limited knowledge in how to modify the programming. It wraps up with my exit from training.

Adventures in World-Line Travel

Here are a selection of stories and experiences that I had when I was involved in world-line travel as part of my MAJestic mission parameters. As such, my experiences gave me some insight into the nature of the universe and of our human species. I hope this is an enjoyable read.

MAJestic Mission Shut-down & Retirement

All programs must end. This is how members of MAJestic that have core kit #2 probes implanted are retired. As they all need to be retired in a specially equipped facility and subject to a life time of monitoring. We cover the entire process and what is involved.

The Ultimate Method to Make Your Computer Safe and Secure

The best way to make your computer secure and private is to have very strong encryption and use an obscure operating system that very few people know about. Here we look at 37 obscure computer operating systems.

What life is like inside the ADC Prison in Arkansas

This post discusses what life is like in a hard labor prison in Southern Arkansas. We discuss hoe squads, food, the hole, commissary, dress, fashion, homosexual culture, prison gangs, murders, relationships and other aspects of life when you are sentenced to "Hard Time".

What it was like for me to leave America for China.

This is my story on the final moments of my life in the USA. I had just completed my retirement sequence for MAJestic and I was released to enter the monitoring section of my retirement. I decided to get the tattered remains of my life together and move to China and this is what it was like for me to do so.

MAJestic Related Posts – Our Universe

These particular posts are concerned about the universe that we are all part of. Being entangled as I was, and involved in the crazy things that I was, I was given some insight. This insight wasn't anything super special. Rather it offered me perception along with advantage. Here, I try to impart some of that knowledge through discussion.

Enjoy.

The Secrets of the Universe

When people discover what my role was in MAJestic, one of the first things that they ask me is whether or not I can "tell them the secrets of the universe". Certainly, they argue, I must have learned something... Well, I did. Here's the first installment.

The Drake Equation as Viewed by MAJestic

Many people use the Drake Equation to figure out why the average person is not exposed to extraterrestrials. Yet, MAJestic members know the real reason. Here we review the variables within the equation relative to MAJestic understanding and discuss things relatively.

Our Galaxy as Presented to MAJestic

Here is a very general overview of the little that I know about our galaxy. It is a mixture of known and accepted science blended with what I was exposed to in MAJestic. Of course, what is presented is within the limits of what I understand, no more. So it is actually a rough outline.

Sirius is not the home of the Enlightened Extraterrestrials

There is a rather large number of "spiritualists" who are convinced that enlightened beings from the Sirius solar system have come to earth to teach and instruct us humans. I actually find it rather laughable. Here, I review what Sirius actually is and why no great enlightened beings live there.

The Alpha Centauri System

Here are my thoughts on the Alpha Centauri System. It is, as always, a mixture of conventional science and what I know through my relationship with MAJestic. Keep in mind, that I am a man with limits. It is but an overview, and what is presented might hold some surprises.

The Fuselage embedded within the rocks of Victoria Falls

There is evidence that there was an accident (of some sort) that damaged a vessel (of some type). Over the years it has become buried in silt, which later turned into stone. Here we study this issue.

The Hammer inside the Rock – The “London Hammer”

Here we have evidence of a shellfish dislodging apparatus or hand-tool that was abandoned millions of years ago. Here we study this artifice. We look at the manufacturing challenges in making such an object and study the environment in which it was lost.

The Hollow Moon

Why is the moon hollow? This is one of those uncomfortable facts that just doesn't jive up with the conventions of accepted scientific knowledge. Yet, every study has confirmed this to be the case. Here we study this issue in detail.

The Mystery of the Lapulapu Ridge

Deep down under the sea in the greatest depths of the Pacific ocean is a mobile underwater city. It's been operating there for many, many years. It has been leaving tracks and debris middens all over the place. Here, we look at this in some detail.

Mystery of the Baltic UFO

Sonar scans, and visual confirmation, indicates that a large disc shaped object skimmed the undersea world of the Baltic sea and crashed. Subsequent investigations were suppressed. Now, all that is available for study are a small pile of rocks. Let's look at this mystery shall we.

Mystery of the Bronze Bell found inside a block of coal.

A hand-bell made out of brass was discovered totally encased in a solid block of coal. What is so interesting about this bell is that it depicts a winged humanoid. The only thing is, the coal dates from a time long before birds, where only insects flew in the skies.

The Oil Lamp Discovered in a block of coal

Many things have been found encased within rock hard coal. One of which is a small “pot”. This is obviously the lower part of an oil lamp, common a few thousand years ago. The problem is what is it doing in millions of year old coal?

Did Extraterrestrials set up a colony in Pennsylvania?

Sounds really strange doesn't it? Well, here we talk about the possibility of a community of very “unique” red-skinned, horned giants, with firearms were actually a colony of extraterrestrials. It's a long stretch. Yet, we look at them from this prism, as unlikely as it is.

The Oxia Palus Facility.

Here we talk about a facility that I know a lot about. It is a MAJestic aligned facility on the surface of Mars in the Oxia Palus region. It is many things, and was initially a mining operation with a smelting and processing facility. Here we discuss this facility as an overview only.

Let's chat about Brown Dwarf solar systems

Up until a very few years ago, no one knew if Brown Dwarf stars existed. Now we know that they do indeed exist, and that they are everywhere. Most people are unaware of them, but they play an important role as these dwarf stars are the home of many an intelligent extraterrestrial.

NASA Manned Space Exploration - What happened?

When President killed the Apollo space program, and Jimmy Carter neutered NASA, everyone sat back, fat and content that money was not being wasted and that instead American infrastructure was being taken care of. Here is the real reason why Apollo and manned space died.

The Disclosure of the CARET Program at PACL

A full unapproved disclosure of a MAJestic related reverse engineering program was released to the public. It concerned the CARET program at PACL. It was quickly attacked and debunked. A music video was even generated as part of it. Here is the full documentation package.

Yes, We Do Live in a Multidimensional Universe

Here we discuss how world-line travel is possible. We look at the physics of the MWI and the mathematics involved. We also discuss an overview of Heaven, our universe and how our experiences within our reality are important. In our reality, everything is possible. It really is.

The True Nature of the Universe

This is a discussion on the true nature of the universe and how individual realities fit within its' scope. I consider this an important writing and it acts as a "bridge" between the various "schools of thought" on the nature of our universe. What is presented is for your consideration.

Why our Understanding of Reality is False

Here we discuss four paradoxes of the second law of thermodynamics and use this as a springboard to illustrate that it is impossible to understand our reality within the MWI using Newtonian limitations placed on us through observation.

Evolution of the first sentient life on Earth.

Humans are not the first intelligent life on earth. There were many others. Here we discuss one of the first species of intelligent life; the Cephalopods. They have existed for hundreds of millions of years, and now exist as octopi that inhabit the oceans around us. Let's talk about them.

Transport of an Extraterrestrial Modular Structure

In 2012 through 2014, a huge armada of skyscraper-sized modular components was tracked inbound to our solar system from deep space. They decelerated and landed on the moon. This is the story of how MAJestic scrambled to find out what was going on at this time.

The Frightening Possibility of Genetic Social Stratification

The primary mission requirements that I was involved in lay in assisting our benefactors in human sentience determination. The human race is moving towards a day of evolution and key to that point in time is the chosen sentience we select. It has frightening consequences.

The most common extraterrestrial species that interacts with Americans.

Here we discuss the grey extraterrestrial alien species. Contrary to the public narrative, there are numerous extraterrestrial species that regularly visit the Earth. In fact, they have all been doing so for many, many years.

The Mystery of the Dellschau Flying Contraptions

Here we discuss the mystery of a secret organization wholly devoted to enabling humans to fly. This organization was active years before the Wright brothers ever contemplated manned air flight. The members eventually died off, and all that remains are the records of their adventures.

MAJestic Related Posts – World-Line Travel

These posts are related to “reality slides”. Other more common terms are “world-line travel”, or the MWI. What people fail to grasp is that when a person has the ability to slide into a different reality (pass into a different world-line), they are able to “touch” Heaven to some extent. Here are posts that cover this topic.

Some True Stories of Cat Heaven

Being in MAJestic taught me many things. One of which was an intimate understanding of Heaven and other “spiritual” things relative to quanta entanglements. Here I discuss what it is like to have a beloved animal (cat) dies and what actually happens to them and why.

Consciousness Migration for World-Line Travel

This post discusses how Heaven was formed, and what reality actually is. It discusses how world-lines function and just what MWI (Many Worlds Interpretation) is. This little post is the foundation of all aspects of my particular involvement with MAJestic. As such, it is important reading material.

What I miss from my original world-line

This is a little micro-post of some of the things that I miss from my time “before” I got involved with MAJestic and all that MWI “stuff”. It really makes no sense to anyone in this reality, but to me, it’s pretty important stuff. It’s simply a compilation of some of the quirks of this reality that are different to me.

Graphic on how world-line travel is possible

Many people are intrigued about world-line travel. They argue that the MWI is too difficult to understand, but thanks to Hollywood, the imagined adventures in alternative world-lines are quite appealing. Here we set forth how the MWI works and how it can be leveraged for world-line travel.

An Observed World-Line Switch - The Aluminum Foil Lady

Here is a report of a person entering this “world-line”. She appears on a busy road and is filmed by an automobile dash cam in the process. She is wearing a protective thermal “space blanket” material coat, and is apparently dressed like a nun. We discuss her and the utility of roads in this context.

World-Line Travel Using Vehicles - Some Examples

There is ample evidence that people are entering and leaving our reality using various methods and techniques. One of which consists of vehicles with heavy devices that enable world-line cross-over events. Here we discuss these events and look at numerous examples.

A World-Line where the Beatles Never Broke Up

Here is a story about a man who ended up getting hurt and was rescued by someone from an alternative world-line. He tell his story and brings back a Beatles mix tape as proof. We discuss his adventure relative to MWI slides and look at commonality of descriptions.

World-Line Creation and Stability Considerations

Let’s talk a little bit about what a world-line is, how it is accessed, and why it sometimes needs to be accessed. This isn’t full of all kinds of stories about visiting different world-lines, but rather why certain advanced species use the MWI to control the sentience evolution of humans.

ProfessorPhate as an Example of MWI Crossover

In 1999 an individual going by the name “Professorphate” produced a narrative claiming that he was from another world-line. In his narrative he talked about this other world-line and the circumstances that brought him to our apparent reality. Presented for curiosity only.

The “Passage of Time” is actually Observed MWI World-line Slides. Here we discuss what time actually is, and the differences between a dimensional egress portal and a MWI slide. We also use examples, two to be exact, where people have entered and left our reality using a 7th dimensional transport. We discuss how this works and why.

What is the Color of Chartreuse; is it Red or Green?

Many people who have lived through the 1980's, such as myself, clearly remember the color to be a deep red like color. However, our current reality describes this color as a yellow green. This confusion is known as a Alter-vús, and this post describes what is actually going on.

Mandela Effect - A System of Soul Management

Here we look at an interesting mystery that is occasionally observed. It is known as the Mandela effect. Essentially it is a situation whereas our memories do not match up with the reality. Here, we look at it in terms of MAJestic and the management and cultivation of soul growth.

What the difference is between Soul and Consciousness

To understand how our reality exists and what Heaven is like you need to understand the basics of just what we are. Here is one such fundamental understanding. That is the difference between souls and consciousness. For while we think, reason and experience, it is our consciousness that does so for our soul.

John Titor Related Posts

Another person, collectively known by the identity of “John Titor” claimed to utilize world-line (MWI egress) travel to collect artifacts from the past. He is an interesting subject to discuss. Here we have multiple posts in this regard.

They are;

John Titor and World-Line Travel as Time-Travel (Part 1)

This is an introduction to John Titor and his claim that he utilized world-line travel to go into apparent past(s) to acquire equipment. He burst onto the internet in 1998 and left in 2001. He left a trail of mysteries in his wake. In review, knowing what we know today, his story rings true.

John Titor and World-Line Travel as Time-Travel (Part 2)

Here we look at the John Titor narrative that describes what happened in the United States that precipitated civil war, and World War II. We look at it from a point of view twenty years later, and to the surprise of many, he accurately predicted many things that we take for granted now.

John Titor and Details on his Time-Machine (Part 3)

Here we spend some time going into the disclosed details of how the Time Machine actually works. We look at the manual and come up with the conclusion that he actually was hiding something or some elements of the machine. Let's look at this issue.

John Titor and our Reactions to his Disclosure (Part 4)

Strange as it might seem, once the news of John Titor hit the internet, many people had all sorts of reactions to it. Here we review the reactions. They, in themselves, tell us a lot about ourselves, society and about the nature of the universe. Here we look at the reactions.

John Titor - Full Text of his Transcripts (Part 5)

For over a decade the actual transcripts of what John Titor said and his discussions on chat boards were obliterated. The only thing that you could find were websites that said he was a hoax. That all changed when enthusiasts collected and posted his writings. Here are the earliest transcripts.

John Titor – Full Text of his Transcripts (Part 6)

There are all sorts of fragments of the John Titor discussions floating in bits and pieces throughout the Internet. This post collects some of the more obscure bits that did not make it into part 5 of the text. These tidbits are interesting but also irritating as the attacks on the narrative are relentless.

John Titor – Full Text of his Transcripts (Part 7)

This is the final discourse from John Titor to the rest of the folks on the BBS “Time Travel” board. He answers questions and responds to requests. He also clarifies things. Of course, the sniping and harping, as irritating as it is, continues unabated. It’s the final posting of this discussion.

John Titor – Full Text of his TTI Board Transcripts (Part 8)

Here is a secondary source for discussions involving John Titor. He subscribed to numerous time travel BBS forums, and this one; TTI is often overlooked. Here, we look at some of his statements on the board. His dialog on this board is very interesting and contains uncommon narratives.
