congjing yu

June 8, 2020

This is part 4 of 4.

This is a complete reprint of the book titled “The Intention Experiment” by Lynne McTaggart. It is a non-fiction book, and it is groundbreaking. In this book, the author has compiled all those studies about the reality of ESP, and PSI, and compiled the results. The results are pretty damning. Something is going on, and Newtonian physics cannot explain it. It can only be explained with quantum physics.

What is going on is that quantum physics is working and weaving it’s magic throughout our lives, and rather than discount things as “superstition” and out-dated religion, this book connects actual scientific studies with the quantum physics principles involved. It explains so many thing that have been discounted as pure superstition.

Thus it’s placement in my blog.

This is for those people who want nice and clean answers to what is going on, yet cannot shake off the Newtonian physics that they learned in High School. This book

teaches you that there is a deeper reality behind everything and as such, it helps explain some elements of paranormal and religion that are often discounted as primitive nonsense.

Welcome to the world of quantum physics and how all those things about prayer, intention, and spirituality actually does have a scientific foundation that they are based upon.

Summary of this section

This section consists of the links and other related background supporting information associated with the book. Included herein for those that are interested.

CHAPTER FOURTEEN

Your Personal Intention Experiments

NOW THAT YOU HAVE PRACTICED ‘powering up’, what can you u intention for in your own everyday life? To help you find out, with the help of my scientists I have designed a series of informal, personal experiments.

The following ‘experiments’ are intended to be read in two ways: as a springboard into ways to incorporate intention into your life, and also as a piece of anecdotal research. Whenever you carry out an intention experiment, I would like you to report it on our website.

To carry out these experiments, all you will need in the way of equipment is a notebook and a calendar. When you are first starting, note the date and times of your intentions. Each intention experiment should be carried out after ‘powering up’ in your intention space, using the programme outlined in chapter 13. Needless to say, if you suffer from a serious illness and are trying to think yourself better, you should augment your own healing intentions with the help of a trained professional healer, whether conventional or alternative.

Make a daily note of any change in the object of your intention, and be specific. If you are trying to heal a condition in yourself or someone else, take a daily ‘temperature’ of change. What does the person feel like, in general? What symptoms have improved? Have any got worse? Have any new ones turned up? (If any situations seriously worsen, immediately consult a professional practitioner, and also examine any subconscious intentions.)

If you are trying to change your relationship with someone who is ordinarily very antagonistic to something more positive, make a daily note of his or her interactions

with you, to determine if anything has changed.

To Have Something Manifest in Your Life

Select a goal that has never happened but that you would like to have happen. Choose something that seldom occurs or is particularly unlikely, so that if it does come to pass it is more likely to be the result of your intention.

Here are some possibilities:

receiving flowers from your husband (if he has never bought them for you);
having your wife sit down and watch a football match with you (if she usually refuses to do so);

having the boorish neighbour who never gives you the time of day start a cheery conversation with you;

having your child help with the dishes;

having your child wake up on his or her own in the morning and get ready for school without prompting;

improving the weather (30 per cent more or less rain, say); having your child make his or her bed;

having your dog stop barking at night;

stopping your cat from scratching the sofa; having your husband or wife come home from work one hour earlier than usual;

having your child watch television two hours less;

getting someone who can't stand you at work to say hello and start up a conversation;

achieving 10 per cent higher profits at work; growing your plants or crops 10 per cent faster than usual.

As you begin to manifest, you can try more complicated thoughts. But remember, at first you want one single event to change, something where change can be easily quantified and can probably be attributed to your thoughts.

Retro-intentions

If you still have a medical problem of some sort, cast your mind back to the point where it started. Carry out an intention for it to resolve itself then. See if you are now

better.

If you are not getting along with someone, cast your mind back to the point where you first had a disagreement and send your intention to change there.

Remember to be very specific.

Ask your friends and family if you can try a retro-prayer for some of their loved ones who were ill 5 years before. Concentrate on their former illness and see if it improves their current state of health. The idea will seem so ridiculous and therefore so harmless that they probably will agree to it. If you feel bold, you may even try this with a local nursing home. First, be sure to obtain the permission of the patient, as well as those in charge.

Report any results by writing in to *The Intention Experiment* website:

www.theintentionexperiment.com.

Group Intention Exercises

Assemble a group of your friends who are interested in trying out some group intention exercises. Create an intention space where you will meet each time. Select a group target in your community. Here are a few possibilities:

improving the weather; reducing violent crime by 5 per cent;

reducing pollution by 5 per cent;

reducing litter on a particular street in your community; getting your mail delivered one hour earlier;

achieving some form of community activism (such as preventing a mobile phone mast from being built in your area);

decreasing the incidence of local road accidents involving children by 30 per cent;

improving the collective grade point average of the local school by one grade; decreasing abuse of children in your community by 30 per cent;

reducing possessions of knives or illegal weapons by 30 per cent; increasing (or decreasing) local rainfall by 10 per cent; decreasing the number of alcoholics in your area by 25 per cent.

Depending on the nature of your intention, make one member of the group responsible for researching statistics involving your local accident, weather or crime

statistics. For these types of statistics, it is a good idea to get hold of reports for the last 5 years in your area and surrounding communities so you have something solid to compare.

Then, when you meet, decide on a group intention statement. When you are 'powering up', visualize yourselves as a single entity (say, a giant bubble or any other unified internal image). Once you are all in a collective meditative state, have one member of the group read out the statement. Meet regularly to send the same intentions. Keep a careful reading of statistics for one month before and several months after you have sent the intentions. Note any changes.

Send the results to *The Intention Experiment* website:

www.theintentionexperiment.com.

CHAPTER FIFTEEN

The Group Intention Experiments

YOU ARE NOW INVITED TO PARTICIPATE in massive group intention experiments with many, if not most, of the other readers of this book. If you would like to take part in the largest mind-over-matter experiment in history, read on.

In these group intentions, you will become involved in important new research to further the world's knowledge about the power of intention. There will be blogs and interactive elements on our website, so that you can correspond with like-minded individuals around the world about our results and the results of individual experiments (chapter 14).

Naturally, it is not compulsory. In fact, I would prefer you not to get involved unless you are passionate about participating. I need committed participants, willing to take the intention experiment seriously. Each experiment might take a few minutes to an hour of your time, although in future we might try experiments that take a little longer.

First, log on to the website (www.theintentionexperiment.com). There you will find information about the dates and objectives of future intention experiments. We will plan those dates to coincide with times of a fair degree of geomagnetic activity. Mark those dates in your diary now; if you intend to participate, it is vital that you don't forget. We have a number of experiments planned, but as scientific experiments are expensive to carry out and require lengthy analysis, there will be sizable intervals between experiments. If you miss an intention experiment, you will have to wait a few months for another one.

Several days before the experiment, read through the preliminary instructions to familiarize yourself with what to do. The instructions will explain that you need to carry out many of the ‘powering up’ exercises of chapter 13 just before you send your intention. You will find information about the time of the experiment in *your* own time zone. The website has a running clock (set to US Eastern Standard Time and Greenwich Mean Time) and a countdown to each new experiment, and will specify the equivalent times in different time zones. Readers around the world will be participating, so it is vital that all the readers send intentions at the right time.

As this is a scientific experiment, we need to have committed and knowledgeable participants, who have read and understood the ideas in this book. Consequently, we will try to weed out potential spoilers or the uncommitted by asking every potential participant to supply a password, which will be taken from phrases or ideas in the book and will vary every few months. We will ask you to supply, for example, the fourth word of the third paragraph on page 57 of the US hardback edition (or page 65 of the paperback). We will make sure we specify passwords for every edition published in every country, so your password will work no matter which version of the book you have read. Just follow the instructions. The only way to be part of the experiment is to have read the book and to log on with the

correct password, after which you will be supplied with a private password, to use for future experiments.

Because this is a scientific experiment, we need to know some details about our participants, such as their average age, their gender, their health – or possibly their degree of psychic ability. On the day of the experiment, you will be asked to supply some information about yourself. Several of our scientists have designed short questionnaires for you to fill in. Of course, this information will be kept confidential, under international and national laws of data protection. Once you have filled in our questionnaires, you won’t have to rekey any information you have already supplied for any future experiments.

On the day of the intention experiment, at the particular time specified on the website, you will be asked to send a carefully worded, detailed intention, depending on the target site. The website will walk you through the steps. You will be asked to ‘power up’ into your meditative state, to enter a state of compassion and to send a carefully worded, detailed intention that will be specified on the website.

For instance, let’s say that we are trying to send an intention to have a spider plant grow faster at Fritz-Albert Popp’s lab in Neuss, Germany, on Friday 20 Marc at 8 p.m. GMT. We will have a photograph or web camera image of the spider plant on the

website, so you can train your intention on the right subject. The website will instruct you to think or say the following sentence on 20 March at 8 p.m.:

Our intention is to have our spider plant in Neuss grow 10 per cent faster than a control plant.

Or, let's say that we have a patient with a wound. Our intention might be: Our intention is for Lisa's wound to heal 10 per cent faster than normal.

Because this is a scientific experiment, we will structure our experiment to test a precise, carefully quantified result: 10 per cent faster or slower, say, or 6°C cooler than normal or than a control. Once finished, the results will be analysed by our scientific team – ideally by a neutral statistician as well – and then published on the website.

I must reiterate that I cannot guarantee that the experiments will work – at first or ever. As scientists and objective researchers, we will be duty-bound to faithfully report the data we have. Whether or not our first experiments are successful, we will continue to refine the design with each new experiment as we learn more about group intention. If the first or second or fifth experiment doesn't work, we will keep trying and keep learning more with every result. The nature of frontier science requires that you stumble along blindly, feeling your way along the right path.

Do consult the website frequently for announcements of experiments, postings of the individual experiments (chapter 14) and announcements of the date of every future experiment. If you have enjoyed the written portion of this book, the website will continue the experience for you as an open-ended sequel.

Chapter 5: Entering Hyperspace

1. H. Benson et al., 'Body temperature changes during the practice of g tum-mo (heat) yoga', *Nature*, 1982; 295: 234–6; H. Benson, 'Body temperature changes during the practice of g tum-mo yoga (matters arising)', *Nature*, 1982; 298: 402.
2. H. Benson et al., 'Three case reports of the metabolic and electroencephalographic changes during advanced Buddhist meditation techniques', *Behavioral Medicine*, 1990; 16 (2): 90–5.
3. The most celebrated was the Investigating the Mind conference at Massachusetts Institute of Technology, September 2005, which featured the Dalai Lama.
4. I am indebted to Stanley Krippner, who supplied me with a list of some 50 healers from a rich variety of traditions. I assembled a questionnaire, which I sent out

*****ebook converter DEMO – www.ebook-converter.com*****

to all 50. Some 15 replied in detail.

- Cooperstein's study eventually was published: M. A. Cooperstein, 'The myths of healing: A summary of research into transpersonal healing experience', *Journal of the American Society for Psychical Research*, 1992; 86: 99–133. I am also indebted to him for his in-depth analysis of the commonalities between healers.
- Information about Krippner's vast catalogue of work was also gleaned from numerous interviews between him and the author, April 2005–March 2006 and correspondence, 2005–2006.
- S. Krippner, 'The technologies of shamanic states of consciousness', in M Schlitz et al. (eds.), *Consciousness and Healing: Integral Approaches to Mind Body Medicine*, St. Louis, Mo.: Elsevier Churchill Livingstone, 2005: 376–90.
- Jilek W. G. Salish, *Indian Mental Health and Culture Change Psychohygienic and Therapeutic Aspects of the Guardian Spirit Ceremonial*, New York: Hold Rinehart & Winston, 1974.
- All information about Bruce Frantzis the result of various interviews, April 2005–March 2006.
- B. K. Frantzis, *Relaxing Into Your Being: Breathing, Chi and Dissolving the Ego*, Berkeley, Calif.: North Atlantic Books, 1998.
- Murphy, *Meditation*, op. cit.

Dr Larry Dossey calls negative diagnoses 'medical hexing', and there is anecdotal evidence that patients often live up to their doctor's gloomy prognosis, even when there is no physical evidence that they should do so. For a potent example see the story of a leukaemia patient who was thriving until he happened to find out what he had. He was dead within a week once his illness had the label of a potentially terminal illness: L. McTaggart, *What Doctors Don't Tell You*, London: HarperCollins, 2005: 343.

Chapter 10: The Voodoo Effect
