Here I would like to discuss a long standing dream that I have had since I was a small boy; the possession of a large roll-top desk complete with a multitude of tiny drawers, cubby-holes, and spaces for all my personal junk and treasures. I have had this dream for a long... long... long time. With that in mind, let's discuss this work of art; this magnificent idea and concept of the roll-top desk.

During the last century, the idea of a Roll-Top desk was appealing and very popular all over America. Many American homes had these styles of desks and throughout the 1960's and 1970's they faded into obscurity. There was a brief revival of Roll-Top desks in the 1980's and then they have been forgotten as overly expensive and extravagant items of furniture. This is unfortunate, because every man should have a Roll-Top desk.

Here's a fine roll-top desk. It's the stuff that dreams are made of. It's a beautiful work of art.

The first time that I encountered a roll-top desk was a very long time ago. One of my friends had inherited it from his father. It was in his bedroom and he would work on his various projects at the desk. He had this kind of glue with a rubber top that you could use to spread glue on paper and make scrap books with .

"I believe that glue is called muslage; I don't see it for sale anymore. Really dates me, eh? if I know what *muslage* is. LOL"

During my childhood, we all used this kind of glue. My friend had it in his desk. We made posters with this. It was fun.

He also had a punching bag in his basement and we would try boxing. Ai! At such an early age! Heck! We were only in second grade, for goodness sakes. It was kinda goofy at the time, but our fathers both thought that boxing was something that all boys had to learn.

What is a Roll-Top Desk?

A roll-top desk is a large desk with drawers and a top compartment that possessed a rolling cover that could cover and lock the contents of the desk in place. This desk was made out of wood, with the vast majority of the wood being hardwood. Under the protected roll-top working area, there were all sorts of smaller drawers, and compartments for the user to store things in.

Antique roll-top desk from the 1930's. Instead of a modern reproduction, this desk sports small handled mini-drawers, pigeon holes, top, pencil drawers, and ledger spaces. Note the four drawers on both sides of the pedestal base, and the central desk drawer.

History of a Roll-Top Desk

The roll-top desk appeared just as the industrial revolution was getting started. At that time, small armies of clerks and office workers were needed to support the various duties of the factory. This included everything from managing inventor to handling the large number of workers at the factory.

The desk was designed in such a way that the top could be pulled down and protect the work from being disturbed. At that time, the office workers would be engaged in work that involved large numbers of papers and documentation. It was impractical to put every thing away at the end of the day and pull them out at the start of a new day. So the roll-top desk was invented.

Here is another antique roll-top desk. Again, please pay attention to the mini drawers and pigeon hole compartments. The rolling cover and it's path is clearly shown. What is not shown is the most excellent swivel chair that would go with the desk.

Further, there was a need for specialized compartments to hold various office stamps, pens and papers, and folders. This created the various styles that had miniature drawers, shelving, compartments and side pockets.

A roll-top desk is the perfect place to store such things as drafting supplies. here is a nice set of drafting supplies that hadn't made it's way (yet) to the trash heap. With a roll-top desk, it could be stored safely and elegantly.

This item of furniture was the mainstay of the small or medium-sized office at the end of the 19th century and the beginning of the 20th.

Antique Roll Top Desk made sometime between 1900 and 1950. I personally think that there is an over abundance of drawers in the desk. They are mostly all of the same size. However, different people have different needs. Aside from that, this desk has a leather mat writing surface, and some very small mini-drawers for keys and minor items. Note that this desk has sides that are on hinges.

They can be swiveled out of the way for an unobstructed work area.

In the working industry, it eventually was phased out and replaced by more durable and cheaper (mass produced) steel desks. Additionally, the idea for filing cabinets, and “flat files” came into being that would (firstly) augment the compartmentalized sections and ledgers of the roll-top desk, and secondly the determination that the roll-top desk did not fit in the modernized image of the state of the art 1930’s Art Deco decor.

These desks could often be found in various small offices, and homes throughout the 1970’s. Over time they were often left to fall apart and rot. Today they are generally rare, with some small-build reproductions floating around here and there. You can find them occasionally at antique dealers and in selected flea-markets. Aside from that, they have pretty much disappeared from the social scene.

This antique roll-top desk has some nice compartments and nice style. It fits the grand criteria for a roll-top desk. I especially like the “mail box” slatted chubby-holes in the center.

Features

These desks had numerous features that made these desks very special. I personally believe that these features are often overlooked in our modern society – one that has an over reliance on cloud computing and storage.

While there are world-wide variations of this desk. Most roll-top desks are strictly American in design and function. Here we can see some of the important elements labeled and identified for the reader.

These features are;

- Large, deep, and wide pedestal drawers, with compartment slats.
- Pull-out “bread board” panels on both the left and right sides.
- Wide and deep working area.
- A selection of small “square” pigeon-hole areas.
- Some desks would have small cabinets or closets (some with windows).

A man needs a drawer to place his little treasures in. He can store the things that matter to him, and the papers and documents that he must maintain.

- A number of horizontal pigeon-holes for papers.
- A number of vertical pigeon-holes for journals and log-books.
- Small mini drawers, each with a metal knob and a slot for a label.
- A slat for holding rulers, drafting triangles, or cardboard folders.

Here's a nice vintage desk drawer. Notice that it has a movable tray compartment, and is made out of good solid hardwood. No fake plywood or particle-board construction here. Also note the beautiful grain of the wood and the overall appearance. Wonderful!

- Medium size mini-drawers, often with a plain knob for pens, and miscellaneous tools. Sometimes lined with green felt backing.
- The roll-top top, often made out of slats that can be locked in place for privacy and security.
- A grand “middle drawer” that would have a wooden carved “tray” for pencils, erasers and paperclips and the like.

— Pull-out “bread-board” extra surface.

— Leather writing surface.

Here are some details that can be found on various roll-top desks. I particularly like the leather mat writing surface, though many people simply would purchase a felt mat and place it on the surface. Note also the side pull-out “bread-board” feature. Often people would place lists of important phone numbers, addresses or codes on these boards, and pull them out when they needed to refer to something.

Accouterments

These desks would often be paired with this low swivel chair. Often with a cushion and wooden arm-rests. It would also be paired with a nice desk mat. Some desks had a leather writing surface, while many did not. In that case, a person would go to the hardware store and purchase their own writing mat.

Some desks has compartments built inside the writing surface. These compartments could be opened by recessed ring-pulls as indicated on this desk.

Pencil tray predominately located in the central middle drawer.

Here are some interesting details that can be found on certain roll-top desks. This includes compartments inside the writing surface and pencil trays in one or more of the main desk drawers.

The writing mat was often leather with a felt surface. The most popular was green. A “banker’s” lamp, with a green shade, and a brass base was also often employed. Though, Tiffany lamps, and lamps with cast designer bases were often employed.

Here is a fine vintage oak wood office chair. It is on a swivel base and has wheels to move around in. Note that it has a small leather cushion, though many chairs did not have this feature. It's a fine chair just about made for a roll-top desk.

Material

Early roll-top desks were built of heavy woods such as black walnut, and small local companies might choose from a variety of local hardwoods. There are many hardwoods that were used.

This roll-top desk has a working and writing surface that can be pulled out and makes for a larger working area. Notice the top of the desk as well. It can support lamps and even a shallow cabinet or bookcase.

Most popular toward the end of the 19th century, close-grained oak was often quarter-sawn, or cut to promote a particularly even grain, reducing the possibility of warping and increasing durability.

At one time, these desks were made with care and concern for the overall appearance of the desk. Wood was selected carefully and cut with care and precision. the end result was a work of art.

Mahogany, teak and cherry also appear in old desks, but from 1900 on, most desks were oak. A desk made from cherry after 1900, for example, would have been a special order or the work of a local craftsman.

Here is an antique “Banker’s lamp” with a Tiffany Art Deco inspired shade (instead of the traditional green glass shade). It’s certainly beautiful.

Why a Man Should Have a Roll-Top Desk

I well remember the exact moment when I fell in love with roll-top desks. My father needed to get or renew his insurance for the car. This was in the late 1960’s. At that time we had a Buick Electra. And, we were trading it in for a 1966 Lincoln Continental.

Man! I sure wish that I had this car today. I'll tell you what. This is a 1966 Lincoln Continental. It was black with a black interior. (So hot in the Summer.) But we loved that car.

So he went over to the local insurance agent in the town. We lived in a small town at the time, and he was a friend of a friend. So dad went into his office. It was a cluttered office next to a tire dealership.

We walked in. There was centuries of dust and clutter there. Inside was this amazingly enormous man. He was built like an elephant and existed there in a state of decay and confusion. He seemed to blend in with all the clutter, piles of paper, stacks of dusty junk, dusty Venetian blinds, and the ancient Art Deco fan that was providing the much needed air flow in that tiny cramped and cluttered office.

He sat there smoking a cigar, with a largish (green plastic) AM radio playing a baseball game in the background. Next to him was a cigarette stand. You know the type, it was a metal pedestal with a handle and a large glass tray in the center. The ash tray was filed with the ashes of many a well smoked cigar.

He sat at this enormous roll-top desk, and offered me a "Orange Crush". When I said "sure", he flipped me a quarter and told me that there was a pop machine around the corner...

There is a certain beauty in a roll-top desk. It is a place where a man can put his stuff. As a boy, I enjoyed the idea of a place where I could put my stuff and collectables at. At that time, I had a small wooden cigar box that I held my “treasures”. But an entire desk...now that would be awesome.

In his office was a roll-top desk. This was not just any roll-top desk. It was enormous. I am not at all exaggerating. I haven't seen anything like it since. This desk was easily the size of our dining table. Not only that, but that tiny office had two of them. They dominated the room, and on them was the clutter of years.

I just sat there amazed. I just looked at the amazing array of cubby-holes and mini-drawers. I loved that desk. I just sat there and soaked it all in. I listened to the baseball game and sipped on my soda.

The meeting lasted maybe two hours. My father signed some papers and then we left. On the way out, I asked my father if we could have a desk like that. He just chuckled.

I loved that thing. Sure, it was a reproduction. And, it was not a full-size desk. But, it still was pretty darn cool.

I think that the reason why I have always liked the idea of a roll-top desk was the idea that it had spaces and compartments for all my stuff. I would, over the years collect junk, papers, writings and bits of flotsam that had meaning to me, but would eventually get lost in the detritus of the house. Probably eventually collecting in dusty boxes in remote corners of the garage. Sigh.

But, if I had a roll-top desk... well, now it's a whole new ball-game. I could store my prized fishing lures in one place, and my precious treasures in other spaces. Of course... being much older, my desk might look a little bit like this rather than my boy-hood dream ever was...

As a man get's older his tastes change. I lost many of my boyhood treasures over time. Now my needs and passions are much simpler. So, yes, I probably don't NEED this kind of desk. yet, wouldn't it be grand to have it to keep some prized whiskey or smokes?

Conclusion

A personally think that having a big roll-top desk would be awesome. It would be a place for my brick-a-brack and clutter. I can well imagine a selection of pens and pencils in the various drawers, and indexed compartments full of my various treasures. I could some of my few remaining baseball cards, and my small collection of bottle openers. Not to mention a fine jewelers loupe and electricians scissors. With them I could place my small nine inch metal rule, and a few calipers.

What ever. All men need a place to keep their personal junk and a roll-top desk fits the bill quite nicely.
