

Alternative Search Engines instead of Google – Metallicman

 metallicman.com/laoban4site/alternative-search-engines-instead-of-google

congjing yu

December 14, 2018

Back in the day, I was one of the first people to start using Google as a search engine. I liked it's clean interface, and simplicity.

Of course, over the years, other people also found this to be the preferential search engine. Unfortunately, Google became big, powerful and yes, evil. They siphon up your personal information with zero regard to fourth amendment protections. They sell the information to the highest bidder, and give it away for free if the person is part of a government agency.

Unfortunately, people like myself VALUE privacy. And that means that I no longer can use Google.

Here is a selection of various search engine alternatives to Google. It is not a complete list. As there are thousands of alternatives. These are some the best ones that I have found.

You might discover, as I have, that they have BETTER and more comprehensive results than Google. You just need to understand that they work differently than Google. So you must query your searches differently...

You see, Google only provides results to you that they feel should be presented to you.

A “googlr”; an employee at Google. They feel that THEY know what is best for you. They will set up the software programs to sort through the reams of information on the internet, so that you only get to view the information that THEY want you to see. See this chick here. She thinks that she is better than you are, in determining what you need to know.

This is problematic. Because they only show you the possible results that you *qualify* for. The qualification rules are kept secret, and are a closely held secret at that. They, like many of their politically liberal brethren, consider themselves as your parents and have the role of censoring your search results for (what they consider to be) your own good.

With all this being said, let’s look at the top candidate...

Duck Duck Go

Let’s start with the first step is divorcing yourself from Google. Use Duckduckgo. If you go duck, you will never go back.

It is clean and operates much like Google does. The only difference is that it is private. Yes, you can think of it as the Google that should have been. While Google is “evil Spock” (a fine Star Trek reference), Duckduckgo would be the “good Spock”.

Evil Spock and Good Spock. Image is from the The Enemy Within (Star Trek: The Original Series). For those of you who have never watched Star Trek or who don't understand the reference; "good Spock" is clean shaven. "evil Spock" has the beard.

Duckduckgo is a search engine that does not **track** or **personalize** your searches and results.

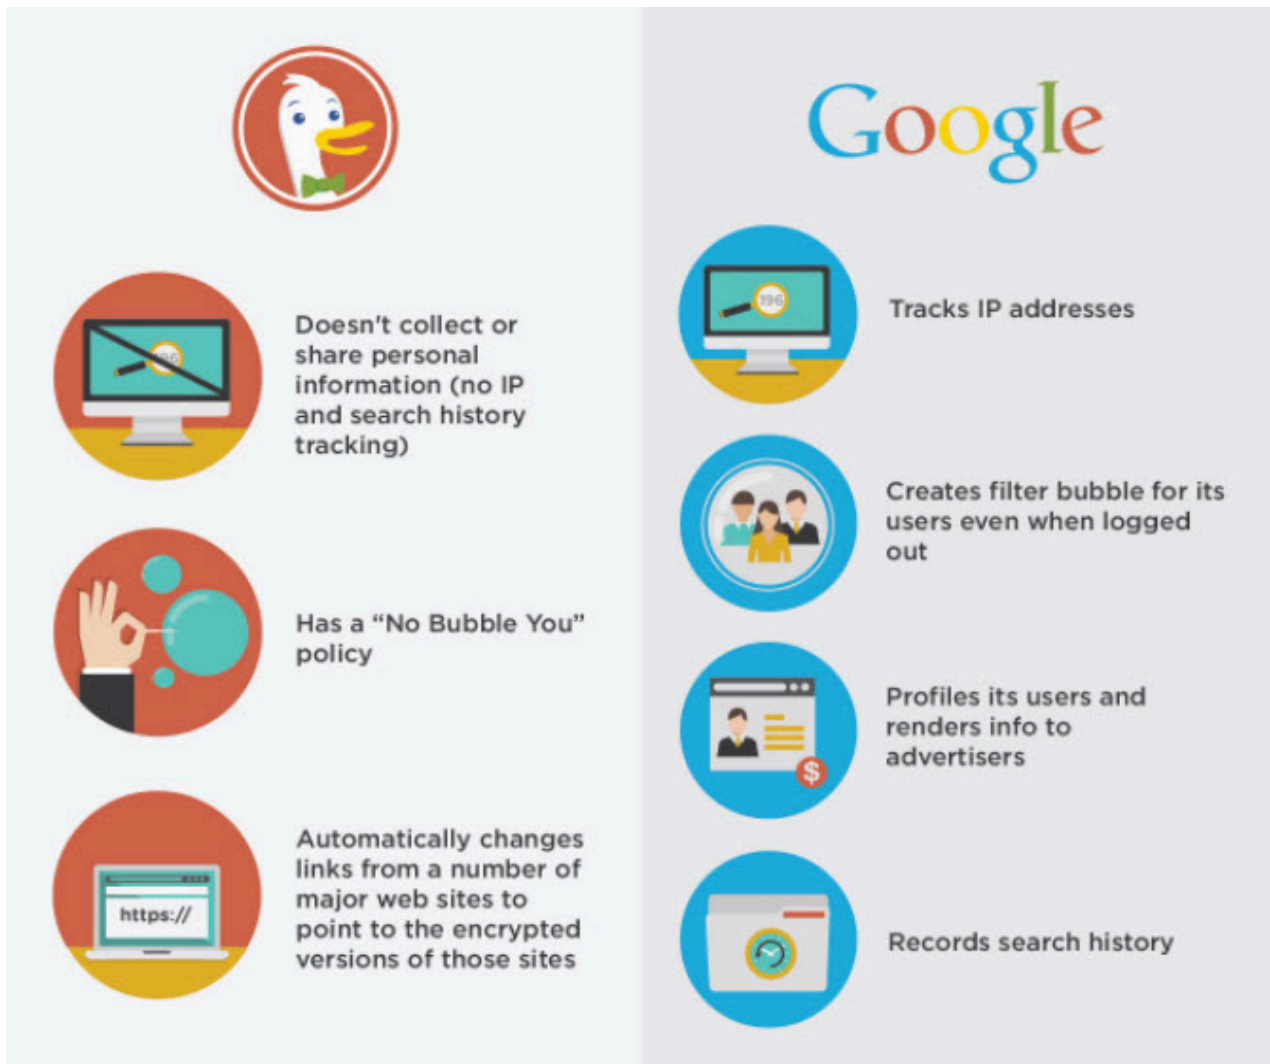

For those of you who are unaware, the "personalization" of search results is the permitted censorship of search results. Don't go down that dark and scary road.

A dark and scary road.

It is my humble opinion that if you like Google, then you will love Duckduckgo. They offer the same kind of service, only faster, better, quicker and with far more privacy.

If you want to make the world a better place, then stop using Google and start using search engines that respect your privacy.

Here is a comparison between Duckduckgo and Google. Obviously DDG takes privacy very seriously. While Google only gives it “lip service”. Well... how do you think Google makes all it's money? You don't see any ads on the front page do you? Nope. They are paid by government agencies to give them YOUR search information.

Duckduckgo is a great search engine that values privacy over everything else. They operate much like Google only they respect your fourth amendment rights.

It should be obvious that Google is working closely with the United States government in the collection of your personal data, as well as the manipulation and censorship of data to control your thoughts. After all, look at all the trips Google had with Barrack Obama. They certainly weren't swapping golf stories.

- [Google's Remarkably Close Relationship With the Obama Presidency](#)
- [Meet Google's Deep State Policy Manipulator](#)
- [Google workers met had 427 meetings at White House](#)
- [Google Makes Most of Close Ties to White House – WSJ](#)
-

Quack!

Unfortunately, for me, Duckduckgo is banned in China. major bummer! So, personally I am forced to use *alternative* search engines. Which brings me to...

[Search Encrypt](#)

Search Encrypt

Like DuckDuckGo, Search Encrypt is a privacy-based search engine. It includes a general search function, as well as image and video search. This is a search engine that was design with privacy in mind. They believe that your likes, thoughts and search history should be just as private as the color of your underwear.

I agree.

They have a very clean interface, much like Google, except that everything is private and kept secret. They can do most of what you need, and all of what I (personally) use the search engine for.

Search Encrypt should be a preferred search engine for anyone wishing to maintain their privacy in a world where everyone lies and makes false promises. **I use it in China without a problem.**

I can see this search engine growing and becoming more popular over the years. Time will only tell, if they will maintain their role as the guaranterer of privacy, or if they will sell out to the highest bidder...

Those tech “giants” in California tend to make empty promises and will sell you out in a heartbeat. Let’s not forget the promises that Yahoo! made when it acquired Tumblr, and then what happened when Verizon took over and crapped on the policies that reflected creative expression in 17DEC18. Never forget the broken promises, the lies, and the sell-out for huge monetary gain.

CEO Tumblr David Karp Akhirnya Mengundurkan Diri. When money becomes an issue, all the free thought, artistic creativity, and hope and dreams come crashing down. Who cares about creativity when you could end up with a new Lamborghini, a nice home on the beach, and all the perks of the wealthy.

That's About It!

Sorry, but that's about it for privacy based Internet Searches that I (personally) would feel comfortable using. The problem is that most other search engines are either (somehow) tied to Google (and the American NSA spying apparatus), or tied to one or another government. Now, there is good and bad with this revelation.

- By splitting up searches between different government agencies and promoted search engines you can effectively DILUTE the content of search history that any one government has on you.
- By using different search engines the SEO attributes are different; thus resulting in different search results.

With that being said, let's look at some more or less QUESTIONABLE search alternatives out there. Some are promoted as "big on privacy", others are simply large but tied to a non-American government.

Keep in mind, these search engines must be used with caution and consideration...

StartPage

We will start with a well promoted search alternative. You can find this quite easily on Bing and Google as the “private” alternative to internet searches. Now, back in the day, Startpage was the world’s most private search engine. It was, because no one else gave a rat’s ass about privacy.

Start Page / ixquick

You see, StartPage was the *first* search engine to allow users to search privately. None of your details are recorded and no cookies are used, unless you allow it to remember your preferences. It also provides a proxy for those who want to not just search, but browse the internet with full privacy.

Instead of being a full alternative to Google, it combines Google Search results with [user privacy](#). So, when you use StartPage, you’ll get the same Google Search Engine results. The only difference is that [your privacy/information isn’t submitted](#). Google only sees StartPage, not the StartPage user. This enhancement is one of the reasons why StartPage results are so useful.

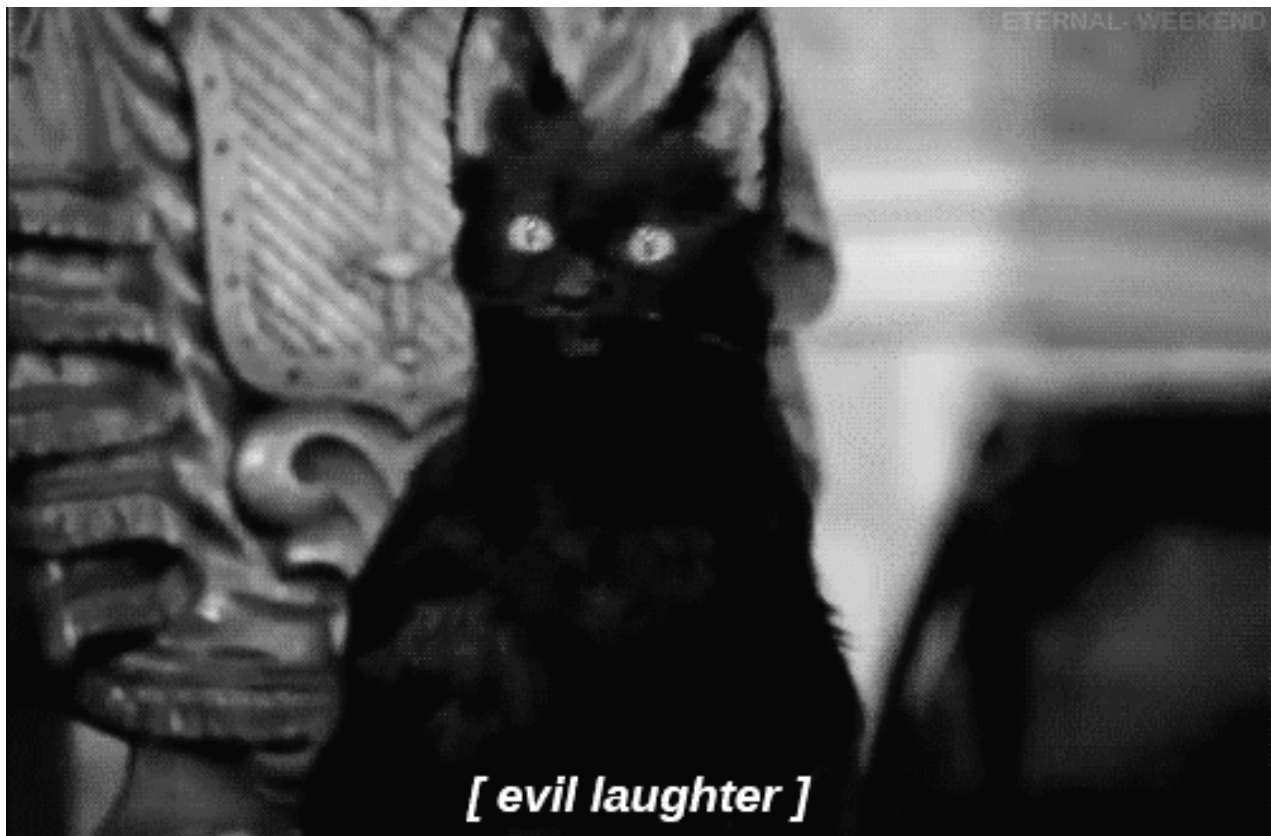

In short, StartPage Search Engine is the most appropriate private search engine [for those who love Google](#) results but can’t make a compromise with privacy.

The user should beware. Many companies that suck up your personal information and browsing habits ALSO promote Startpage. You have to wonder why.

I mean, why does Facebook and Google offer links to “their versions” of Startpage? It makes me pause and think.

- Facebook version of [Startpage](#)
- Google version of [Startpage](#)

Do you believe that a Facebook version of Startpage would maintain your privacy? What about a Google version of Startpage? I don’t. In fact, even if they were sincere in wanting to secure your privacy, I can’t help but think of them polluting the entire effort.

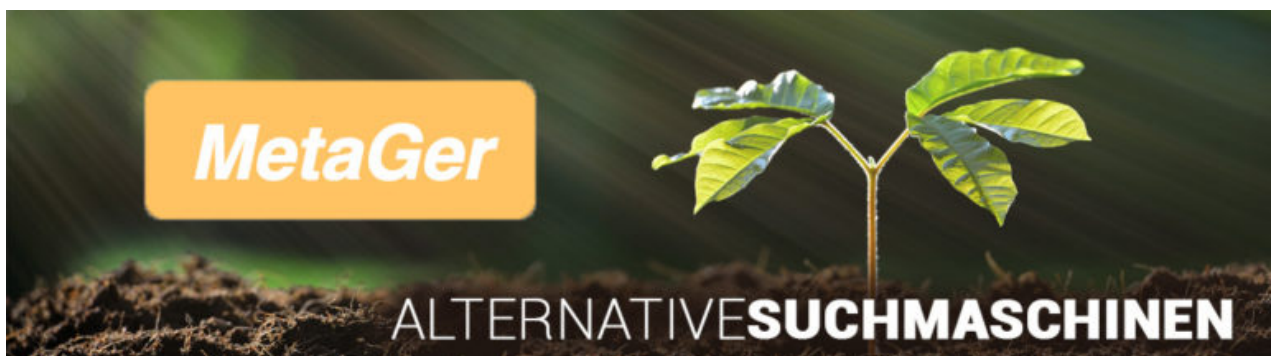

Evil Laughter

MetaGer

How about going to a different country? How about Germany? Now, I have to make a full disclosure that I personally love Germany. I think the German people are awesome. I love the food. I also like the “restaurant chain style” bordellos. Not to mention it is a beautiful land with an awesome history.

They also, and most importantly, respect privacy.

Metager

[MetaGer](#) is German-based meta-search engine, developed on 24 small scale web crawlers. It focuses on user’s privacy and makes searches untraceable by leaving no footprint behind. Also, it integrates a proxy server so that users can open any link anonymously from the search results while keeping their IP address hidden from the destination server. This eliminates the chances of advertisers to target you for ads.

The results are obtained from 50 different search engines. Before presenting final results of the query, they are filtered, compiled and sorted.

Comparing Metager to Google.

If you have optimized your website for search by Google, and Bing and the other more prominent American websites, you might be disappointed. This search engine utilizes a completely different criteria to search with, and the results reflect it.

However, the really great news is that you will find many websites that Google, and Bing cannot find.

And now the bad news. It might be publicly private, but who actually knows what the German government might have on the browsing habits of those whom use this search engine...Hum?

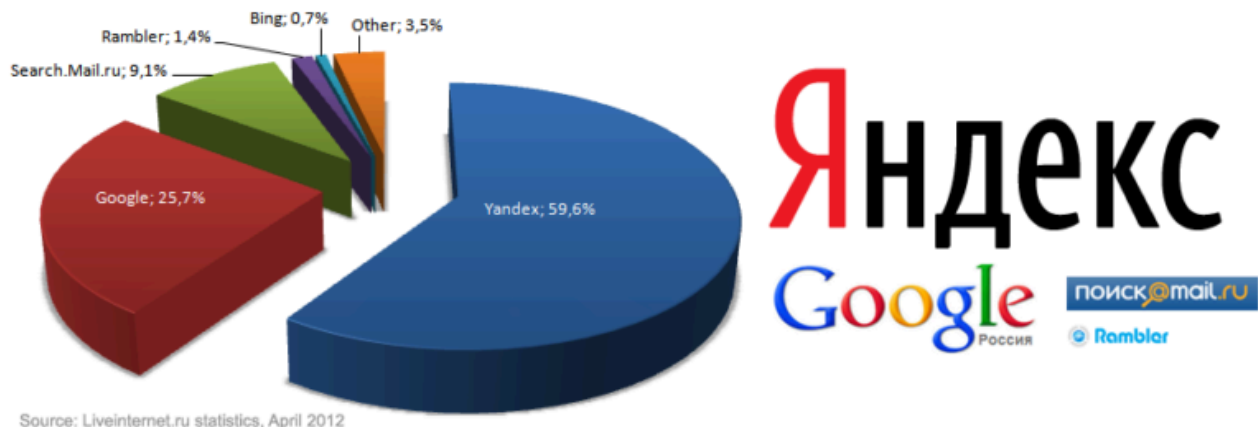

[Yandex](#)

Now, we go to Russia!

Yes. Russia, of all places. We need to put on our commie waders and step out of the American deep-state swamp and enter another deep-state swamp. Only this time it is a cold one covered in icy slush; the Mother Russian land of internet.

[Yandex](#) is the largest search engine in Russia with nearly 65% Russian market share. According the Comscore, it is the fourth largest search engine in the world with over 150 million searches per day as of 2012.

Search engine market shares in Russia

Yandex Search Market Share.

Yandex features a parallel search that shows results from main web index as well as specialized information resources, including blogs, news, image and video webpages, and eCommerce sites. In addition, the search engine provides supplementary information (like sports results), and contains spell checkers, autocomplete functionality and antivirus that detects malicious content on webpages.

Unlike the other search engines, this one is NOT optimized for privacy. So, that tells me that you can pretty much expect the Russian government knows who you are and are tracking your internet history for their own purposes. What ever they might be.

Hum... is there a cute large-chested blond-haired Russian femme fatal in my future? I wonder?

Now, the beauty in using this search engine is that the organizations that want your personal information don't really want *your* data. After all, it's going to be pretty hard to target you for Russian Viagra in Saint Petersburg when you are living in Sunnyside, California. And, it will be unlikely for you to read the Cyrillic characters in their advertisements in the first place.

Russian advertisement for ice cream. Heck, it might even be enjoyable to see some targeted Russian advertisements for a change.

Personally, I think that there is far more harm in the NSA having your personal information than any Russian secret police force, even if it's a modern version of the KGB.

The reasoning is simple. If the United States government; federal, state, local or agency want's to arrest you, they will need to make a case out of how evil you are. Then they will compile the reasoning into the most damning case, and convince you to agree to lesser charges via plea bargain. Often they will use your computer habits to justify their narrative.

However, in Russia, and China, they won't do this. If they want to arrest you, they will simply do so. Period. No justification and song and dance of survival is necessary.

Storm in Russia.

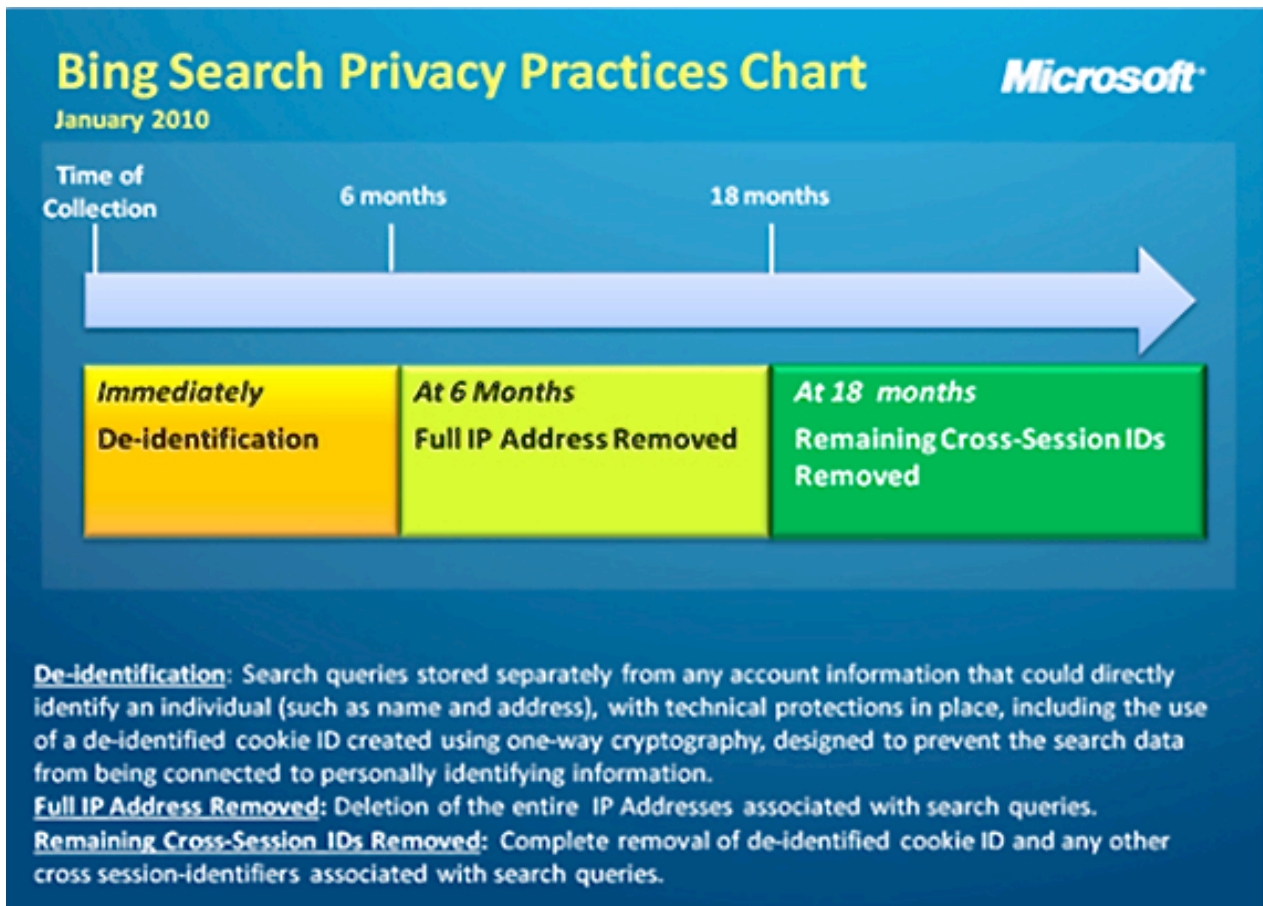

[Bing Search](#)

OK. Now, back to America. We all know that Google has rivals...Microsoft.

Bing is Microsoft's attempt at unseating Google, and arguably the second-most-popular search engine today. Bing used to be MSN search until it was updated in summer of 2009.

They should NEVER be considered a Search Engine that honors individual privacy.

However, they are placed here in this list for those members of the *European Union*, who get to have privacy in the their searches that Americans are denied.

Privacy with the Microsoft BING Search Engine.

Touted as a *decision engine*, Bing tries to support your researching by offering suggestions in the leftmost column, while also giving you various search options across the top of the screen. Things like ‘wiki’ suggestions, ‘visual search’, and ‘related searches’ might be very useful to you. Bing is not dethroning Google in the near future, no, but it is definitely worth trying.

Like Google, however, they will most certainly block certain websites, and avoid others at the request of the United States government. From “Uncle Sam’s” point of view, you go after the “low hanging fruit” that the vast bulk of Americans use. Then ridicule the outliers as “misfits”, “deplorables”, and “Nazi’s”.

The international website “Kick Ass Torrents” was seized by the Department of Homeland Security. The reason being that they offered royalty free downloads of copyrighted movies and music. Thanks to President Obama, visiting any of these websites is a federal crime that Americans are forbidden to visit. Even for a nano-second.

As far as privacy is concerned, Bing will alter the behavior of the Search Engine if you live in the EU.

All you need to do is [1] Go [here](#) and fill out the application form, [2] wait for a response. Then, [3] trusting that they will obey your request, you are free to use Bing.

"Please provide any other relevant information describing your privacy interest in having this information blocked in response to searches on the name specified above and **why you believe your privacy interest outweighs the public's interest in free expression** and the free availability of information."

That's right, boy's and girl's, you need to petition Bing and explain why you want to have privacy. That should tell you all you need to know about how these software companies think of you and your families.

If you are European, you must petition to these people and explain why you want privacy. As an American, you will not be granted privacy. It is not granted by Bing. You are forbidden to have it, simply because NO ONE is enforcing the fourth amendment.

Youdao

Now to China. Privacy...I highly doubt it.

Youdao Chinese Search Engine.

Youdao is a search engine in China released by the company NetEase. It allows users to easily search for images, web pages, music, news, blogs, and even Chinese to English entries in the dictionary, and several others. In 2012, Hui-hui shopping assistant was established, serving as a tool that will allow users to compare items and prices online.

I would not say that they would honor a person's right to privacy. However, like the Russian search engine, the companies that seem to want to collect user information would find most Americans boring and useless.

[Yippy Search](#)

Some deep searches are worth the risk to privacy. When that comes in play, consider Yippy!

Yippy

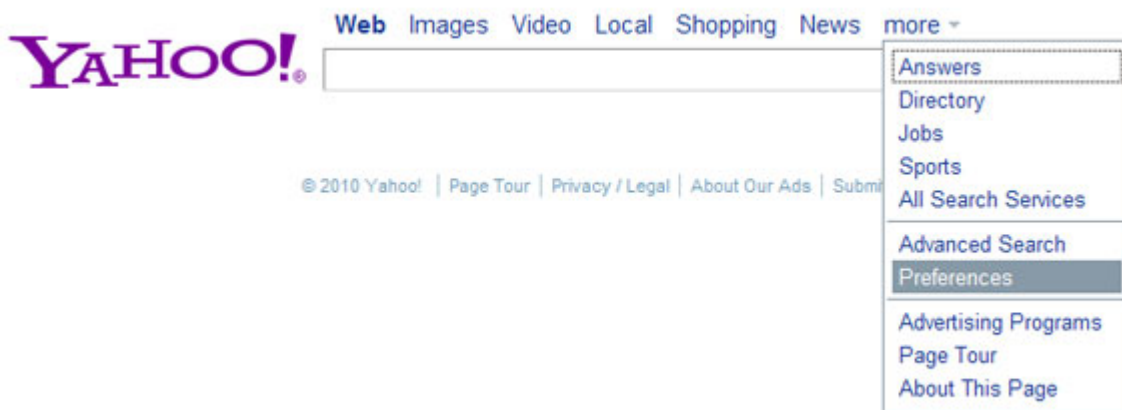

Yippy is a **Deep Web search engine** that searches other search engines for you. Unlike the regular Web, which is indexed by [robot](#) spider programs, Deep Web pages are usually harder to locate by conventional search.

That's where Yippy becomes very useful. If you are searching for obscure hobby interest blogs, obscure government information, tough-to-find obscure news, academic research and otherwise-obscure content, then Yippy is your tool.

[Visit Yippy Search](#)

There isn't any guarantee that your privacy would be maintained, however, this search engine will take you places that other Search Engines (think Google and Bing) would hide from you.

Yahoo! Search

Yahoo! Search

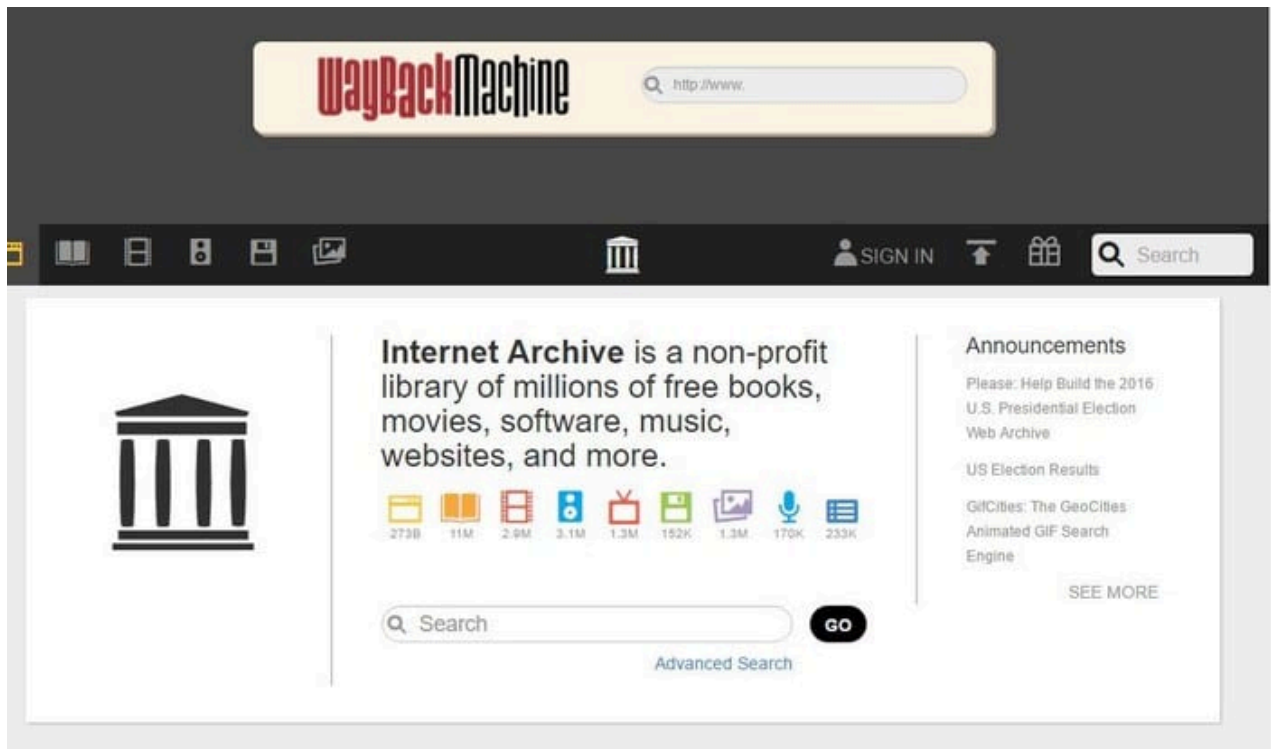

Yahoo! is several things: it is a search engine, a news aggregator, a shopping center, an mailbox, a travel directory, a horoscope and games center, and more.

This 'web portal' breadth of choice makes this a very helpful site for Internet beginners. Searching the Web should also be about discovery and exploration, and Yahoo! delivers that in wholesale quantities.

Yahoo! also won't protect your privacy like some of the other search engines mentioned herein. However, they won't pre-censor to "protect" you either.

On Google, for instance, I had to wade through pages and pages of stuff about how the John Titor Time-traveler was a hoax, with no pages on the actual text of his BBS narrative. Yet, Yahoo! took me right there in a nano-second. Straight the "meat", with no roadblocks of propagandized articles.

[The Internet Archive Search](#)

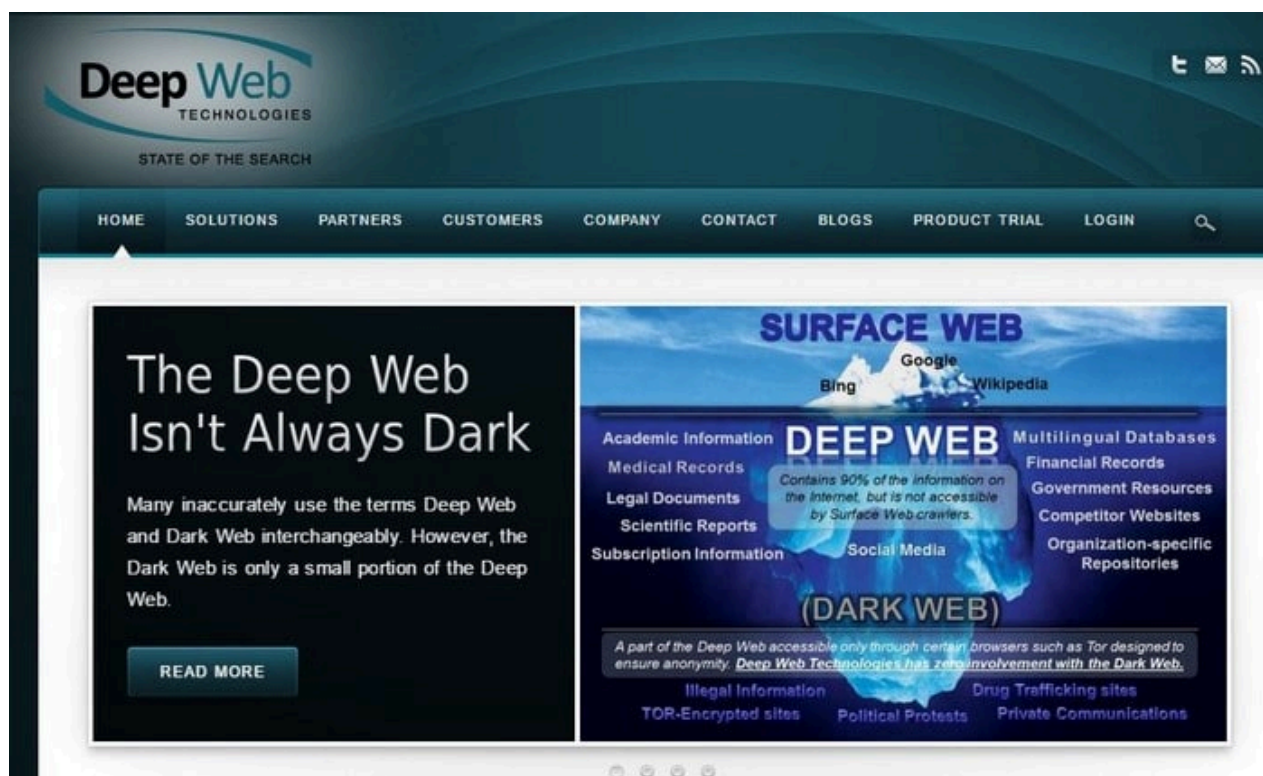

The Internet Archive – the Way back machine.

The Internet Archive is a favorite destination for longtime Web lovers. The Archive has been taking snapshots of the entire World Wide Web for years now, allowing you and me to travel back in time to see what a web page looked like in 1999, or what the news was like around Hurricane Katrina in 2005.

You won't visit the Archive daily, like you would Google or Yahoo or Bing, but when you do have need to travel back in time, use this search site.

[Visit The Internet Archive](#)

Deep Web Tech

With DeepWebTech you can choose between five search engines. If one doesn't work for you, you can always count on the other to help you find what you need. Just like Chrome, DeepWebTech also counts with browser plugins for you to use if you are searching for something in particular.

With this deep web search engine, you can find information on a subject such as medicine, science, and business. If Google is not giving you what you are looking for, you can count on these deep web search engines getting the job done.

While the privacy is suspect with all these search engines, I do not think that occasional use of such Deep Web trawlers are anything to be overly concerned about. Use a VPN and TOR, if you are concerned.

Other Search Engines....

Here are some other search engines that are worthy of a spin. Like before, they won't really guard your privacy. However, they might scatter all your searches in a series of disjointed data centers.

Ask.com

Launched in 1996, [Ask.com](#) is a question answering-focused web search engine. Despite its age, Ask is still very active. They have coupled their search-system with a robust

questions and answer system with billions of online content.

As of 2014, the website had 180 million global users per month (with a larger user base in the US), and to date, its mobile app has been downloaded over 40 million times. They acquired a social networking site, Ask.fm, where people can ask questions with the option of anonymity. ASKfm handles around 20,000 questions every minute.

Baidu

Baidu is the most popular search engine in China. This is definitely the most useful engine if you want to improve your [SEO's](#), but it functions very differently from Google.

The main differences compared to Google come down to how the sites operate. While on the surface they may look similar, different focuses and older systems mean that while Baidu's technology is better at processing Chinese, they still place a high emphasis on Meta tags, meaning users are open to scams.

One key difference that should be noted is that Baidu is a completely Chinese website, and there are very few non-Chinese sites that come up. While this is difficult for those who are trying to break into the market, it is one of the reasons why it has such a large user base.

QiHoo 360

This is another very important search engine in the Chinese market. In 2016 they had around 29% (according to SEOagencychina.com) of the market share, however, in 2017 they seem to have around 10% of the market. This is a significant drop and can be accounted for by Baidu's massive increase.

QiHoo 360's flagship search engine is actually called Haosou, so it is important that while the company is called QiHoo 360, the search engine has a different name.

Haosou offers a wide range of services including news, websites, images, Q&A, videos, images and music, as well other services. As you can tell it runs a very similar service to Baidu.

Other Search Engines

There are other search engines that you can use. However, you do need to be careful. Many (not all, but many, many) work with Google. (Snarl!) They offer (so called) "anonymous searching" but rely on Google as the back-end. I, for one, do not trust them. When I search, I don't want to have anything to do with Google. No matter what anyone else says.

Gibru

Gibru claims to provide Uncensored, [Anonymous Search Engine](#) experience — both in the web version and with the official Mozilla Firefox toolbar. This search engine is noted for the 128-bit secure encryption, the promise of data safety and optimal privacy.

[Lukol](#)

Lukol is an easy-to-use private search engine. It does neither track your information nor store your IP. It has no tie-up with Governments or security agencies to [share your data](#). In short, you don't have to worry about your search indexes getting exposed.

[Qrobe.it](#)

Qrobe.it is another alternative private search engine to rely upon. The interface is way too simple, and you'll be able to search for Images and Web content. You also get some Settings option and Advanced Search

Some Alternative Search Engines...

Ah, it is just impossible to do anything privately today. Everyone wants a piece of your action. Sigh.

Naver

Naver isn't actually an "alternate" search engine at all. In fact, [Naver is number one in South Korea](#) where Google has a very small share. It used to be powered by Yahoo's Overture system, but following the Yahoo-Microsoft alliance, the engine decided to build and launch its own keyword advertising system, so Naver has now become a leading search engine with its own advertising system. If you're targeting Korea, put this one first.

Seznam

In the Czech Republic, [Seznam](#) has been in the lead for a long time and still just about competes with Google there. However, Google is rapidly creeping up and knocking at its door. For now, continue considering Seznam as essential in the Czech Republic. Over the border in the the Czech Republic's sibling state Slovakia (they were once one nation and known as Czechoslovakia), Google has already taken over as a strong lead in first place.

Eniro

Eniro is an interesting example of a search engine in Sweden and for a variety of reasons. [Eniro](#) is the original publisher of Sweden's Yellow Pages and, as a result, Eniro still has significant brand traction in the country. However, more recently, Eniro has partnered with Google for some aspects of search and for advertising.

What's interesting though is that Eniro has developed its own pay per click advertising system and then backfills with **Google ads** which is a model I think we can expect to see emerge more widely. You don't have to take much more share of advertising revenues, to justify building such a system and amortizing its costs over a few years.

Onet.pl

Well, I will say this about the Poles. They are honest about collecting your data and selling it to others for their own purposes...

Before you click "Go to site" or close this window, please read this information.

We ask for your voluntary consent to the processing of your personal data by our business partners and provide information about the so-called cookies and about the processing of your personal data by us.

By clicking "Go to site" or closing the window by clicking the X icon, you agree to the following. You can also refuse consent or limit its scope.

A Polish portal with a strong following, Onet.pl has a slightly different version of the Eniro approach. Here, its search coming almost entirely from Google. It relies on on its advertising for revenue generation.

If you want to agree to the processing of your personal data by Trusted Partners of RAS Polska Group, which you share in the history of browsing websites and web applications and location data generated by your device for marketing purposes (including automated analysis of your activity on websites and applications to determine Your potential interests for adapting the advertisement and offer), including placing web tags (cookies, etc.) on your devices and reading such tags, click "Go to website" or close this window.

Orange

The telecoms companies over the years have, in general, gained a larger slice of "eyeballs" and have often overtaken the former search engines for audience. In France, for instance, Orange has a very strong portal which carries a search function. That search function is powered by Voila.fr — probably the number one ,original French search engine. It's not Google...Hurrah!

However, the pay per click advertising on Orange.fr comes straight from Google, so this is an example of the opposite business model to those above.

Spiegel.de

Another trend of the moment is of newly prominent search sites that are news portals, generally the online mirrors of offline mega-brands. Der Spiegel (The Mirror) has been the leading and best respected German news magazine since its launch in 1947. Its move to

online guaranteed a strong audience and an opportunity for both search and news advertisers.

It has a fascinating approach to search. Here, all searches query the [Spiegel](#) itself. Other issues are broken down by related organizations. For instance, [plus manager-magazin.de](#) for management issues, [merian.de](#) for travel and Wikipedia, clearly giving it a focus on responding to informational queries.

Spiegel doesn't yet have a keyword-specific search facility not yet having discovered the opportunity, but it does enable you to build your own banner ads directly online and is just one step away from a very influential keyword search facility. Watch this space!

It's very interesting, and might one-day be the future of searching the internet. However, an alternative to Google, it is not.

Alibaba.com

It is a search engine and it's not. It is a Yellow Pages and it's not. Strongest in China and India, Alibaba is difficult to describe apart from saying that in size, it dwarfs some of the better known search engines.

Some describe [Alibaba.com](#) as a dating site matchmaking manufacturers and their various types of distributors, which is actually pretty fair. And it has its own keyword matching advertising facility as well.

Personally, I use Alibaba quite a bit. If you want something. You buy in Bulk. Why spend \$400 for ten Viagra pills, when I can buy the raw material for 100,000 pills for half that amount?

Conclusions

One cannot utilize the Internet without a Search Engine. Today, many programs and most of our communication is through the Internet. Our portal and the ways of accessing this Internet is through Search Engines. A person who controls your access; controls your life.

Don't allow them this ability.

In America we proudly call ourselves "free", and that we have "Freedom". We announce that we have the Bill of Rights that "protects" us. None of this is true. This is simply because, like a garden, the Bill of Rights must be nurtured...respected and tended to from time to time. And when rabbits come and munch on the plants in the garden, they need to be shooed away or killed if need be.

Update 27JUL20

Mojeeek.com:

One of the last independent search engines. Mojeeek is based out of the UK, and indexes websites on its own (just past 3 billion last month). It advertises no bias in its search results and it lives up to this claim. I searched for "vaccine danger" and was impressed with the variety and accuracy of the sites listed—mostly anti-vaccine sites, as expected, as opposed to Google which heavily filters it to only pro-vaccine apologia sites. There isn't even an option for filtering the content for typical "family safe search." Other than that it is a bare-bones search engine with a tab for web, news and images. They have a robust privacy policy, but very little independent reviews of this site, and I can't tell how they get revenue.

Gigablast.com:

An independent search engine using open-sourced code, Gigablast gathers its own results from independent web-crawling (it has indexed over a billion websites). In this it fights an uphill battle against the big players who refuse to give its bots equal treatment to information. So far I have found its search results fair and unbiased, but there is a little more "clutter" in the results than I am used to from the big search engines, but this reflects its honesty: it is a small, organic search engine. The only source of income is a link for donations (unfortunately

through Paypal). Their blog reveals many of the underhanded ways that Google manipulates the information marketplace. They don't have the privacy features touted by other search sites, except to say that they don't sell any personal information.

[Private.sh](#):

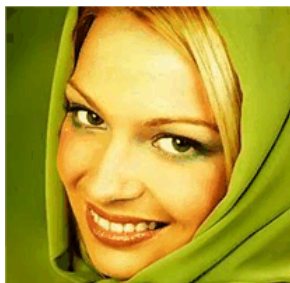

Fortunately another privacy-oriented group built a smooth interface based on the Gigablast independent search results and adds the highest possible privacy. Not only does it strip away any IP information, but it encrypts any search terms you enter within your own browser before it traverses the internet to their website, where it is decrypted, sent to Gigablast, and the results encrypted before sending back to your computer. This effort effectively shields both your query and the results you see from any spying or eavesdropping attempts along the way. Additionally, no personal information is stored and cannot be subpoenaed. All of this is done seamlessly.

Take Aways

- Selection of Search Engines are important for free and unlimited access to information.
- There are many search engines to select from.
- This post includes English search engines that have various degrees of privacy.
- The first step in taking control over your fourth amendment protections is to STOP using Google and use a private and secure search engine.

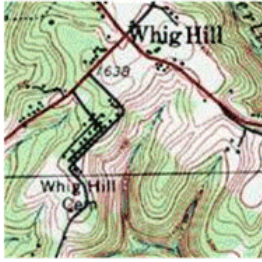

Posts Regarding Life and Contentment

Here are some other similar posts on this venue. If you enjoyed this post, you might like these posts as well. These posts tend to discuss growing up in America. Often, I like to compare my life in America with the society within communist China. As there are some really stark differences between the two.

The Most Important Things That a Man Looks for in a Woman.

Here, we look at the things that men search for in a woman. These things are considered, by men, to be absolutely essential in a mate. We discuss ten attributes and go into detail as to why they are important.

Adventures Exploring the Cemeteries of Indiana

Cemeteries can tell us a lot about ourselves, our history, and our future. This is most especially true in regards to smaller and remote cemeteries located in the counties that surround us. This is my story about the impressions that my forays into these curiosities made upon me.

What it was like being a kid in the early 1970's

This is my narrative of what it was like growing up a a young teenager in 1971. This took place in the hills of Pennsylvania outside of Pittsburgh. I was 13 years old. I went to school, rode my bicycle around everywhere. I fished with my father, and watched television a lot.

The Fiasco of the Reengineering of the Common Tomato

This is the sad, sad story about how the wonderful and tasty tomato was reengineered to be "better". It was made better to ship. Better to sell. Better to store. However, there was one thing missing. No one paid any attention to taste, which is why it tastes like a cardboard shipping box today.

A Movie Tribute to the 1980's When Ronald Reagan Ran America.

Here we argue that movies reflect society when they were made. Today we see popular movies being remade as all female versions due to the progressive realities today. Likewise, the movies of the 1980s reflected the time when they were made as well.

Mad Scientist Explorations

Here we discuss what it was like growing up as a boy in the 1960's and the 1970's and the people, things, and adventures that inspired us. As such, we explore how the independence of growing up enabled us to cope through life when we got older.

The Gorilla Cage in the Basement

When I was a small boy, I used to play in the abandoned buildings nearby. Here is a story about one of the objects that lay hidden inside one of those buildings and the possible mysteries that it held. As a child we thought it was a gorilla cage, now as an adult, I am not so sure...

The Importance of a Family Meal Together

There is nothing more important and satisfying than spending time together with friends and family and eating a meal together. It is a time of friendship, familial bonding and relaxation. Here we discuss what I have learned from my childhood and how I apply it today in my life.

The Pleasures of Fresh Baked Bread with Butter

One of the things that I have come to miss, since I moved to China, is fresh hard crusty rolls with full salted butter. The Chinese are not really fans of crusty bread. They like sweets and sponge cakes. Here I describe something that is close to me; not appreciating what you have right in front of you.

What Work was Like in the 1960's and 1970's.

When people go to work today, they find that there are all kinds of rules and regulations. It is for diversity, safety, inclusion, and improvement in a new progressive world. Well, here is what work was like before it became a sterile progressive testing ground for the New World Order.

Learning during my 1970s High School years

Here is a pretty long post on what it was like to go to elementary school in the 1960's, and then attend high school in the 1970's. I graduated in 1977, and that my friend is exactly the target date for the famous movie "Dazed and Confused". Here is the real deal what it was like.

Some True Stories of Cat Heaven

Being in MAJestic taught me many things. One of which was an intimate understanding of Heaven and other “spiritual” things relative to quanta entanglements. Here I discuss what it is like to have a beloved animal (cat) dies and what actually happens to them and why.

Life Lessons from Working within the Corporate Dream – 1

After I was trained by MAJestic, I was left to fend for myself in Corporate America. It was a hellish existence. As such, I learned many lessons concerning behavior and the ultimate impact that it holds on our families, our friends, our loved ones, and our very lives. Here are my commentaries.

Life Lessons from Working within the Corporate Dream – 2

This is part two of the two part section. There is quite a lot of information to impart. Stories are told, and experiences relayed. Honestly working in corporate America in the 1980's, through the new century really sucked. It was harsh on everyone except the owners of the companies.

How to Build Up Your Life from Nothing.

This is for all those young men who are just leaving school and trying hard to build up their life. You can do it. Here are my thoughts and advice for a young man who is encountering that most difficult of challenges; carving your life out in the wilds of the world.

Allow your Children to Play and Grow (Part 1)

I am horrified, just horrified, that parents do not allow their children to play, roam and explore on their own. It has created a society of pampered fearful children. Here I discuss this in terms of what I know. This is very non-PC and might offend the more liberal readers out there.

Allow your Children to Play and Grow (Part 2)

This is the second part of my rant about permitting children to play, explore and have fun. Everyone, the odds that some stranger will abduct your child is very small. Most people who do this are family friends and neighbors. Stop being so fearful. It harms the development of your child.

Ode to Diabolical Cretin John McCain

Well, that evil son-of-a-bitch is finally dead. If his grave wasn't so far away, I go there and dance on top of it. This guy has spent his life backstabbing people, hurting people, concocting wars, and doing everything in his power to disrupt the lives of people. Good fucking riddance.

The Song "Baby Got Back" Translated into Latin

Here is a fun post. The song "Baby Got Back" is translated into Latin and then back again. I have to tell you that it is indeed hilarious. *Rebecca, ecce! tantae clunes isti sunt!* (Rebecca, behold! Such large buttocks she has!) Anyways, it's just all fun and games. Enjoy.

More Posts about Life

I have broken apart some other posts. They can best be classified about ones actions as they contribute to happiness and life. They are a *little different*, in subtle ways.

On Being an Older Gent

Here are my thoughts on growing old as a man. The truth is that the life that I expected to have as I was growing up never materialized. Instead, something else manifested. My life today is nothing compared to what I thought it would be. For my illusions were created by American media.

Be Who You Are

All our lives we are told who to be, what to do, what career to take. Our religion, our work, our schools, our government, and our loved ones all tell us what we need to do. Here, I tell you the opposite. Stop allowing others to tell you what to do. You know what you need inside of you.

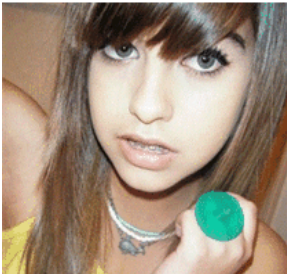

Calexit and the American Civil War

This is a pretty detailed look at the causes of the American civil war, and why it wasn't about slavery. We look at the rewriting of history by the internet, and the efforts that President Obama took to keep California intact so that the Democrats could maintain political power and control.

Why an American man should leave America and Travel

All people should get up off their duff and go forth and Travel. However, this is most especially true for American men. The United States has become a crucible of PC progressive realities that attack and depreciate American men. Go out, young man, see the world as it really is!

The Amazing Bremelanotide PT-141

Forget Viagra, and all those other ED medications. This is the real deal. This little baby causes humans to *go into heat*. It interacts with the brain and sets up feelings of intense arousal on both men and women. It turns people into 16 year olds. As such it is banned in the USA by the FDA.

Bronco Billy and the 25th Law of Power

Bronco Billy is a fictional movie starring Clint Eastwood. The movie depicts the life of a man who decides to change his life and go ahead and do what he has always dreamed of doing. He goes out and becomes his dream. There are lessons here for all of us, we only need listen.

The r/K Selection Theory applied to American Politics

The r/K theory is a pretty well-known theory on animal behavior. It simply states that animals behave as they need to based on the scarcity of resources. Here, we argue that it can be applied to why humans follow different political philosophies. Especially in American politics.

How they get away with it

Ten years ago, Bankers committed fraud in Wall Street that just about devastated the nation. Earlier, we had the S&L fiasco, the nightmare with penny stocks, and now the grand wholesale treason with the selling of Top Secrets to a foreign nation. This is how they get away with it.

The Line in the Sand – Now What?

It's the same story. Just vote for us, and we will correct everything. Yet, nothing ever happens. You know, boys and girls, this old "song and dance" can only be maintained for so long. Eventually it will fracture, and people will no longer rely on elections to institute change...

The importance of having a second passport.

So President Trump is building a wall to protect Americans. Hum. Where have I heard that before? Oh yes, in Germany right when they were making the wall that separated Berlin. Walls serve two purposes; they keep people out, but they also keep people in. Be careful what you wish for.

How Rocket Scientists Build Paper Airplanes

This is a tale of what me and my classmates used to do when we were young Aerospace Engineering students at the university. We would design paper airplanes and shoot them down with bottle rockets. Here is just a fun little exercise down "memory lane". Enjoy.

What is Snopes.com and can it be Trusted?

Snopes is a "fact check" website that is fully funded by the oligarchy. It is used to "shout down" any narratives that does not support the rich and powerful, and politically connected globally. Here we discuss the organization, who they are and what they represent.

Today America Taxes it's Expats without Representation.

This is a sad state of affairs. Americans who reside outside of the United States now have to pay American taxes, even though they have no representation in Congress. As I recall this was one of the reasons for the American cry for independence in 1776.

What life is like inside the ADC Prison in Arkansas

This post discusses what life is like in a hard labor prison in Southern Arkansas. We discuss hoe squads, food, the hole, commissary, dress, fashion, homosexual culture, prison gangs, murders, relationships and other aspects of life when you are sentenced to "Hard Time".

The Hazing of New Employees – A Lost Tradition

Up until the 1980's all companies would haze new employees. Today, we live in a world regulated by the government and policed by Human Resources. We forget how things used to be just a handful of decades ago. Here is my narrative when I started to work.

How to Build a Gallows and a Hangman's Noose

The United States is entering a period of strife. There will be violence. There will be discord and discomfort. It will be an ugly time. There will be winners and losers. It will be painful for the losers, and the victor will need build a gallows. This is how to do so and why it is needed.

A Wish List of Favorite Firearms

This is a personal list of many favorite firearms that I would like to own. There are various reasons for the particular weapon of choice, and I provide my reasons. This post has no other purpose than to express my desire to own certain weapons that I cannot as an American.

The Ultimate Method to Make Your Computer Safe and Secure

The best way to make your computer secure and private is to have very strong encryption and use an obscure operating system that very few people know about. Here we look at 37 obscure computer operating systems.

Is America a Republic or is it a Democracy – What is it?

Here we take a nice good look at what the United States is today. We look at reports that are suggestive of other governmental organizations. We look at what is going on contemporaneously inside the United States, and we look at how the United States behaves globally.

The Many Things that Democrats want to Ban

This is a running list of the many things that American Democrats want to ban, have banned, or are trying to ban. You know, a ban of anything is a restriction on freedom. That is not what America was founded upon. Yet, here we are today. Everyday is a new ban, and loss of freedom.

Nations that an American Man could Travel and Relocate

to – Part 1 Here, I suggest places where an American man could go if he wanted to start all over again. You know, this happens. Often a man will go through a nasty divorce, or get raked over the coals by a business associate or the United States government. When it happens, it's time to start new.

Nations that an American Man could Travel and Relocate

to – Part 2 Here, I suggest places where an American man could go if he wanted to start all over again. You know, this happens. Often a man will go through a nasty divorce, or get raked over the coals by a business associate or the United States government. When it happens, it's time to start new.

Stories that Inspired Me

Here are reprints in full text of stories that inspired me, but that are nearly impossible to find in China. I place them here as sort of a personal library that I can use for inspiration. The reader is welcome to come and enjoy a read or two as well.

Robert Heinlein's "The Long Watch" – Full Text

What if you were in charge of all the nuclear weapons in the world, and your base Commander checks your political leanings to see if you are willing to conduct a coup d'état. What would you do? Would you go along with the opportunity, or would you be a lone hero?

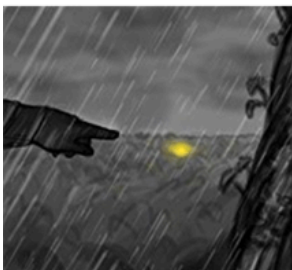

Kaleidoscope (Full Text) A Story by Ray Bradbury

This is the full text of a short story by Ray Bradbury. It concerns the final moments of a crew of spacemen as they drift about in space helplessly after their space rocket explodes. They know that no one can help them as they await their final moments tumbling through space...

Here There Be Tygers by Ray Bradberry

When I was younger I used to read science fiction stories for pleasure. They filled my minds with adventure and passion. One of my favorite authors was Ray Bradberry and here is a complete reprint of one of the stories that has influenced me to be the man that I am today. Enjoy.

The Long Rain (Full Text) by Ray Bradberry

This is the full text of a most excellent science fiction story. It concerns a group of survivors from a crashed spaceship stranded on a Hellish rainy planet; the tropical cloud-covered Venus. They survive the crash, but have to battle the forces of nature and their own passions.

The Fog Horn (Full Text) by Ray Bradberry

Here is a story about the emotions of being the last of your kind. This story is one that influenced me when I was a young boy in the 1970's and continues to haunt me to this day. All of us are human. We all feel emotions and passions. They drive us to accomplish or destroy. It's our choice.

The Rocket (Full Text) A Story by Ray Bradbury

This is a nice short story about a poor man who dreamed about flying into space. No matter how hard he worked, and no matter how much he saved, he was never able to provide for that dream. Then one day, when he was asked to scrap a test rocket, a thought came to mind...

Dark They Were and Golden Eyed (Full Text) by Ray Bradbury

This is the complete short story by Ray Bradbury. It is a story about change and adaptation. I first read this story in my teens and it influenced me to live the life that I am currently living. It is a great read.

A Sound of Thunder (Full Text) A Story by Ray Bradbury

This is the full text of the great time-travel story by Ray Bradbury. Here, a time-travel machine is used to send people back in time to shoot a dinosaur. However, something goes wrong. What would you do? It's a classic story and well worth a read again.

The April Witch (Full Text) by Ray Bradbury

This is a story written by Ray Bradbury that describes what might happen when a young teenaged girl has the power to enter the body of another person. What if, forbidden to experience love and relationships with "normal" people, she uses magic to experience forbidden pleasures...
